A message from Steve Hornady

The lever gun is a classic American firearm – the rifle that helped build our country. For many hunters, though, the lever action rifle has never been more than a “brush gun,” a short range platform that simply couldn’t perform much beyond 100 yards. It wasn’t a limitation of the rifle that caused that. It’s the ammunition. Blunt, flat point cartridges that safely stack inside the tubular magazine, but deliver poor aerodynamics in flight. Well, I’m here to tell you that everything you know about lever gun ammunition has changed for the better!

That’s because Hornady has developed the LEVER^{EVOLUTION} cartridge. LEVER^{EVOLUTION} features a pointed tip bullet using a soft elastomer tip that won’t initiate the primer of the cartridge ahead of it in the tubular magazine – even under the most extreme conditions. Because of the improved ballistic characteristics, these cartridges make your favorite lever rifle a legitimate 300 yard performer!

You can find out a lot more about the LEVER^{EVOLUTION} in this catalog, online or in any of your favorite shooting and hunting magazines; but, trust me on this – LEVER^{EVOLUTION} will be the biggest news in shooting sports this year!

Also for 2006, Hornady engineers have refined our reloading dies with an ingenious Zip Spindle™ that makes adjusting dies faster and easier. We’ve also refined our shell holders and shell plates, case activated powder drop, and there’s an improved handheld priming tool you don’t want to miss.

I hope you enjoy the new catalog and the great new products that our engineers continue to produce. As always, please let us know about your hunting and shooting experiences with our bullets and ammo. It’s always fun to hear from you!

STEVE HORNADY
PRESIDENT

Hornady is proud to contribute a percentage of our sales to the Hunting & Shooting Sports Heritage Fund to foster a better understanding and greater participation in the shooting sports. Hornady is proud to also support the following shooting sports organizations:

InterBond™

FEATURES

1) PREMIUM POLYMER TIP

The sharp point improves ballistic performance, accuracy and initiation of expansion.

2) BONDED CORE

The bonded design ensures that the bullet achieves controlled expansion with virtually no fragmentation and the core will never, ever separate from the jacket.

3) EXPANSION CONTROL RING

Controls expansion to form a large, flat mushroom and a wide wound channel over twice the bullet diameter.

4) THICKER, TOUGHER, STIFFER JACKET

Necessary to retain weight and guarantees over twice the bullet diameter.

When it comes to applying science to the art of hunting, there's never been a better example than the Hornady InterBond.™

The Hornady InterBond™ uses a proprietary bonding process that holds the core and jacket together no matter what the bullet encounters. Simply stated, the core will not separate from the jacket – period.

And, unlike partitioned or dual-core bullets, where the front core can separate from the bullet mass, the InterBond™ holds together in a single, destructive mass that delivers a deep, wide wound channel without over-penetrating.

Thanks to the bonding process and a thicker, stiffer jacket, the InterBond™ retains more than 90% of its mass – even through tough hide and large bones. In addition to weight retention, the InterBond™ expands immediately to more than twice its diameter for maximum energy transfer at any range.

Combine all that hard-hitting power with the proven ballistic advantages of our SST™ design, and you have a super-accurate bullet that delivers maximum energy right where you aim.

Best of all, the Hornady InterBond™ packs all this premium performance into a bullet priced lower than the competition.

We've made it safer to hunt dangerous game.

Hornady's InterBond™ bullet line continues to grow. We managed to improve our tried and true line of large caliber soft point round nose bullets. By combining a rugged new jacket material with the same bonded core technology we perfected in our line of polymer tipped InterBond™ bullets, we were able to make the world's best dangerous game bullets even better.

These new soft points perform like an expanding solid. Their specially alloyed jacket and bonded core allow them to drive deep and expand in a very controlled fashion, retaining over 95% of their weight. These new InterBond™ bullets let the hunter transfer the most energy possible to the beast that's hell bent on delivering its own shocking energy.

Scott Burkett took this very nice Aoudad Ram with a handloaded, 7mm Rem Mag, 154 gr. InterBond bullet. "The Ram," he writes, "was taken at just over 100 yards and dropped instantly on impact."

Cory Rath dropped this 7X6 elk with his Encore 308 at 220 yards. The Hornady InterBond 150 gr. 308 went through both lungs. Despite hitting ribs on both sides, the bullet was found - completely intact - under the hide on the exit side.

Shay McGowan shot this caribou bull at 330 yds with our 180 gr. InterBond. Shay writes, "That bullet absolutely crushed him."

Hornady also offers factory-loaded InterBond Ammo. See pages 29 and 30.

FEATURES

1) PREMIUM POLYMER TIP

The sharp point increases the SST™'s ballistic coefficient, making it faster and flatter shooting. On impact, the tip also initiates controlled expansion at all velocities.

2) SECANT OGIVE, BOATTAIL SPIRE POINT PROFILE

It's a fact: bullets that travel faster hit harder. The Hornady secant ogive, boattail spire point profile gives hunters the incredible speed and downrange energy they're looking for.

3) THE INTERLOCK RING

Ensures the core and jacket remain locked solid during expansion, so the SST™ retains the mass and energy needed for dramatic wound channels. Perfected in the famous Hornady InterLock™ hunting bullet.

When Hornady engineers set out to design a bullet that combined deadly terminal performance with a high ballistic coefficient, they found the answer to both in the SST™ design.

.30 CALIBER SST
150 Grain
2843 fps

.30 CALIBER SST
165 Grain
2751 fps

.30 CALIBER SST
165 Grain
2015 fps

They started with the proven design of our InterLock™ bullet, and added a sharp, pointed tip to cut through the air for faster, flatter shooting. Hornady engineers then tackled the problem of too-rapid expansion that plagues many tipped bullets and by combining a one-piece core and strengthening the jacket in critical areas, the SST™ became a bullet that delivers controlled expansion, superior weight retention, and massive shock for a clean, quick kill.

In the field, you'll soon come to realize that every single detail of our Hornady SST™ was engineered to shoot flatter, fly straighter, and hit harder.

Lowell Hawthorne took this very nice Wyoming antelope from 120 yards with a handloaded 139 gr. SST from a 280 Remington.

Corky Stewart took this 250 lb., three-point Montana Mule deer while it was trotting away at 225 yards (later confirmed by laser range finder.) He writes: "It was a fatal dose of my handload, with Hornady 130 gr. SST bullet in .270 Winchester. Dropped this buck in his tracks with one shot. Thanks, Hornady, for a great performing bullet!"

Hornady also offers factory loaded SST Ammo. See pages 30 and 31.

L.A. Aspinall took Hornady along again for his second trip to Africa, where he took this Blue Wildebeest with a single shot at 250 yds. L.A. was shooting Hornady's 30-06, 165 gr. SST bullet in a handload.

FEATURES

1) PREMIUM POLYMER TIP

The polymer tip increases the ballistic coefficient and improves accuracy, while also initiating dramatic expansion on impact – even at low velocities.

2) MOLY-COATING

Moly-coating reduces wear on your barrel and enhances velocity and accuracy. Available in several calibers and weights of V-MAX™ bullets.

3) HIGHER BALLISTIC COEFFICIENT

Hornady combines the sharp, pointed polymer tip with the most ballistically-efficient profile for a high ballistic coefficient. The V-MAX™'s profile also provides the maximum bearing surface for added in-flight stability.

4) SWAGED LEAD CORE

The swaging process allows for precise formation of the core up and around the tip, with a cavity under the tip's stem. This allows the tip to build up energy before smashing into the core, causing dramatic fragmentation of the core and jacket.

5) PRECISE BOATTAIL & FLATBASE DESIGNS

Utilizing the proper base design provides incredible in-flight stability for extreme long-range shooting.

The polymer tip of the V-Max™ bullet is the key to its dramatic accuracy and devastating expansion, even in long-range, low-velocity situations.

The tip raises the ballistic coefficient for improved velocity and flight stability, and on impact initiates bullet expansion.

The copper jacket is designed to work with the tip to deliver incredible accuracy at long range, and it assists the V-MAX™'s dramatic expansion. The copper jacket provides the necessary bearing surface for maximum in-flight stability. Inside the barrel, the jacket is built to withstand the faster twist rates of many of today's advanced varmint rifles. It all means the bullet will hold together until impact.

Anytime you find yourself coming down with varmint fever, just take a box of V-MAX™ and call us in the morning. Hornady loves to hear about the success of your shooting!

**Hornady's
Moly-Coated
V-MAX™ Bullet.**

Sure, V-MAX™ is tough on varmints, but it's also easy on your favorite varmint gun – especially our moly-coated bullets. In some loads, molybdenum disulfide coating works to improve velocity and accuracy while also reducing wear on the barrel.

Hornady V-MAX™ bullets are available from your Hornady dealer in a variety of calibers and grain weights, as components and loaded in Hornady's high-performance Varmint Express™ ammunition.

The target range provided a live target when a Swallowtail Butterfly presented at 75 yds. **John Lindberg** took it with his 20 gr. 17 cal. V-Max bullet. He wrote, "This is not atypical accuracy from Hornady components."

10-year old **Thompson Bruegger** took his first coyote at 150 yards, shooting a Hornady 65 gr. V-Max bullet in his 240 Weatherby. The coyote dropped on the spot.

Jake, a Team Hornady member, dropped both of these coyotes with his Savage 22-250 shooting Hornady factory 55 gr. V-Max ammo. He writes, "The Yote on the left was drilled in the chest at about 300 yards and dropped without a twitch. This is THE most accurate load I have fired in this rifle to date."

Traditional

Hornady's traditional line of bullets includes all-time favorites in Varmint Bullets, Hunting Bullets and Full Metal Jacket Bullets.

With the exception of our FMJ and Varmint Bullets, the traditional line of bullets features exposed lead tips for controlled expansion and hard-hitting terminal performance. Most have our pioneering secant ogive design – one of the most ballistically efficient profiles ever developed by Hornady engineers (see below). And, most feature our exclusive InterLock™ design – a raised ring inside the jacket that is embedded in the bullet's core that keeps the core and jacket locked together during expansion to retain mass and energy.

The round nose and flat point bullets are for use in guns with a tubular magazine, and their profile helps guard against unwanted discharge in firearms with tube feed magazines.

Our Full Metal Jacket bullets serve two purposes. The large diameter FMJ-RN (round nose) bullets are designed for hunting the world's toughest and most dangerous game – delivering deep, bone-shattering penetration. The other FMJ design replicates the bullets used in military "ball" ammunition. They also are good for hunting animals when minimum pelt damage is important.

SECANT OGIVE DESIGN

Pioneered by Hornady for use in hunting bullets, this technology broke new ground in ballistic engineering and is now used in bullets for everything from match to varmint shooting.

The secant ogive is a geometrically developed design that creates the most ballistically efficient profile, yet retains the optimum bearing surface. The combination of the slender point and increased bearing surface results in lower drag, increased stability, flatter trajectories and amazing accuracy.

Douglas Warner was able to take this bull elephant on his latest African safari, shooting our Hornady 500 gr. solid with his Browning Safari FN 458 Winchester Mag. The elephant carried 51 and 53 pound tusks.

Peter Langam is still an active hunter at age 73, and was recently asked by a landowner to help eliminate a group of domestic goats that had gone feral. Shooting a handload of his favorite Hornady 150 gr. RN, Peter was able to drop five goats from 100 to 150 yards.

Varmint Bullets

Our traditional Varmint Bullets are highly accurate, high velocity projectiles you need for the challenge of shooting varmints at long range. From 17 to 30 caliber, there's a bullet in this line for every varmint.

INTERLOCK™ TECHNOLOGY

What makes the InterLock™ so special? It's designed to be a devastating hunting bullet, and nothing less. The InterLock™ Ring – a Hornady exclusive – ensures that the core and jacket remain locked during expansion. The InterLock™ retains more mass, energy and momentum after impact, and transfers that energy to the target. Its reliable stopping power has earned the InterLock™ a worldwide reputation as a bullet for serious hunters.

- 1) INNER GROOVES:** Strategically weaken upper section of the jacket, ensuring consistent, controlled expansion even at long range.
- 2) TAPERED JACKET:** Jacket thickness is precisely controlled for expansion at all velocities.
- 3) ONE-PIECE CORE:** Does not separate like two-piece cores. The InterLock™ retains more mass and energy for deep penetration and large, consistent wound channels that ensure quick, clean kills.
- 4) CANNELURE:** Provides accurate and consistent crimping, and also works with InterLock™ ring to ensure the core and jacket remain locked during expansion.
- 5) THE INTERLOCK™ RING:** The raised InterLock™ ring is embedded in the bullet's core, ensuring the core and jacket are locked in one piece during expansion to retain mass and energy. A Hornady exclusive.

Samuel Bice chose his .35 Whelen for a southeast Alaska brown bear hunt, and Hornady's 35 caliber, 250 gr.SP bullets for his handloads. Stalking within 100 yards of this bear, he broke the bear's left shoulder with his first shot, and a second shot put him down for good.

W. Chip Taylor writes: "I have cleanly taken four big game animals with your 100 gr. BTSP loaded for my 243 Win. This is my best mule deer to date."

While hunting with INGOGO Safaris, **Jim Wilson** took this hippo with our 458 Win Mag FMJ ammunition.

Full Metal Jacket Bullets

Whether you choose an FMJ bullet for its deep, bone-shattering penetration or its ability to protect the integrity of the pelt, you'll find the perfect Full Metal Jacket in our traditional line.

Match Rifle shooters strive for perfection—every shot, every time.

At Hornady, we strive for the same goal when we design and create the match-grade bullets these shooters use in competition.

With our boattail hollowpoint, for example, we pushed design to the limit. Then we put it through painstaking production controls and strict testing to ensure it is as accurate as a bullet can possibly be. The same engineers who design Hornady's match bullets shoot those bullets in competition themselves, and they have only one goal in the design lab and on the range – to improve performance and scores.

Every year, more and more competitive shooters are discovering the competitive edge they get from our match-grade boattail hollowpoints – printing tighter groups and producing more tournament wins. If you're pushing yourself toward perfection, try a box of 100. We can virtually guarantee it won't be your last box!

F E A T U R E S

- 1) ULTRA-LOW DRAG™ TIP**
The low drag and uniform point raises the ballistic coefficient and precisely balances the center of pressure relative to the center of gravity in order to achieve optimal in-flight stability. That means greater accuracy at longer distances.
- 2) SECANT OGIVE PROFILE**
The geometric profile works to produce low drag and flatter trajectories. The secant ogive design also provides the optimum bearing surface for stability in flight and the best ballistic coefficient possible.
- 3) IMPROVED TIP SHANK**
The improved tip shank offers the necessary mechanical support to withstand the extreme velocities of our 50 caliber match bullet, helping to support pin-point accuracy.
- 4) SWAGED LEAD CORE**
The swaging process provides excellent uniformity and balance for consistent performance and accuracy.
- 5) BOATTAIL**
The angle and length of the boattail is unique to each caliber and weight of A-MAX™ bullet to maximize ballistic coefficient and accuracy.
- 6) JACKET**
The jacket of our A-MAX™ bullet is drawn to the tightest tolerance and concentricity achievable.

Hornady A-MAX™ Bullets

It's a fact: The Hornady A-MAX™ bullet design grew from a relentless application of everything we know about ballistics and flight characteristics. After all, match shooters demand perfection from their bullets every time they step on the range.

The aerodynamic secant ogive profile, the sharp and pointed tip and the unequalled concentricity of the A-MAX™ design give it an extremely high ballistic coefficient for near perfection in flight.

The A-MAX™ bullet is the ultimate result of more than half a century of studying bullet performance. Every aspect of accuracy has been designed into the A-MAX™ – from its Ultra-Low Drag™ tip to the

angle of the boattail base, the A-MAX™ is engineered for extreme accuracy. The proof is in the shooting, and with our A-MAX™ bullets, don't be surprised when you print your tightest groups ever.

Wind Drift Comparison of A-MAX™ vs. Standard BTHP Bullet

The superior design of the A-MAX™ bullet ensures considerably less wind drift and much greater accuracy potential. At 1000 yards, a standard boattail hollow point's wind drift is a full 18 inches greater than A-MAX™. (Test based on 10 M.P.H. crosswind.)

■ Standard 30 cal. 168 gr. BTHP ■ 30 cal. 168 gr. A-MAX™

The shooting world lost a good friend this year, and we're proud to honor the memory of **Skip Talbot**. Skip was an accomplished shooter and great ambassador of the shooting sports. Skip's talent and dedication to the shooting sports will be missed.

Claire Matt, a member of the California Grizzlies shooting team wrote, "Hornady A-MAX bullets were a great help in overcoming the wind at 600 yards, and the Hornady Match bullets were highly accurate and consistent at all yardages."

Laura Peter writes: "I have been shooting Highpower Silhouette competitions since 1998, using your 95gr. V-max bullets in my .260 Remington. Highlights include winning the women's Highpower Silhouette World Championship in 2004, and in 2005

I captured the Canadian High Power Rifle Silhouette Championships. I have had the opportunity to experiment with many other manufacturers' bullets, and have always come back to the Hornady 95 gr. V-max."

FEATURES

1) A POINT THAT IMPROVES PERFORMANCE

Precise folds divide the XTP™ in six symmetrical sections, strategically weakening the jacket and initiating controlled expansion even at low velocities. The design also ensures no fragmentation at high velocities.

2) NO EXPOSED LEAD

The copper jacket protects the nose of the XTP™ bullet, so the hollow cavity functions properly on impact. This feature also ensures proper feeding in semi-automatics.

3) BALANCED EXPANSION

The XTP™'s jacket and core expand at the same rate to ensure they remain locked together, transferring all downrange energy to the target.

4) SWAGED CORE

Totally uniform in the core density, this ensures balanced expansion, as well as in-flight stability.

5) CANNELURE

On revolver bullets, the cannelure helps achieve accurate, consistent crimping. The cannelure also keeps the core and jacket locked together, even during expansion at high velocities. All cannelures are applied before the final forming process to eliminate any distortion to the finished bullet, which could effect accuracy.

6) DRAWN COPPER JACKET

Expansion is controlled by varying jacket thickness down the length of the XTP™. It provides a definite advantage over plated bullets, which have a uniform jacket thickness over the entire bullet.

Hornady's XTP™ is one of the most accurate and deadly bullets ever made.

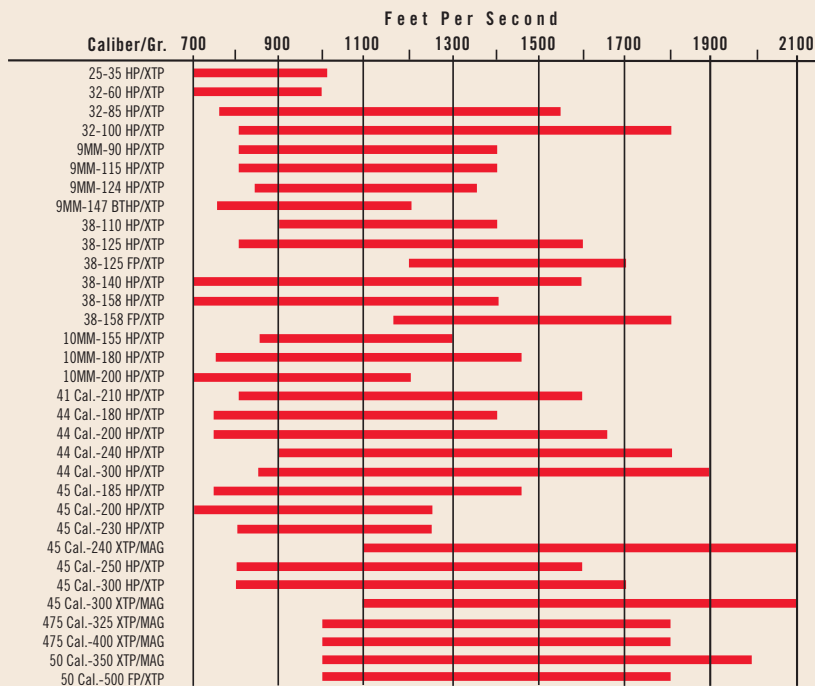

Originally designed for hunting, self-defense and law enforcement application, the XTP™ demonstrated the kind of accuracy that led many competitive shooters to adopt it. Todd Jarrett, one of the top competition shooters in the world, uses the XTP™ in competition, where dead-on accuracy is essential. But, it's the stopping power of the XTP™ that has truly built its world-class reputation. From the outset, XTP™'s were specifically designed to expand reliably at a wide range of handgun velocities to deliver a deep, terminal penetration with every shot.

James Swidryk had the chance to hunt at a preserve in Pennsylvania. He carried his FA 454 with handloaded Hornady XTPs. The pictured Corsican popped up from bed at 60 yards, and James made a chest shot to anchor the ram.

Velocity Performance

No other bullet performs at such a wide range of velocities. Most handgun bullets are designed to perform at a single factory-specified velocity, but you want more! The XTP™ offers controlled expansion over a range of velocities. This chart illustrates the wide range at which each XTP™ will perform.

FMJ Handgun Bullets

Full Metal Jacket handgun bullets have long served as a standard for target shooting applications. Hornady FMJs are completely encapsulated with a rugged jacket unlike those of so many of our competitors – and the difference in performance is clear. The thin-plate full metal jacket from other manufacturers is easily distorted and often breaks or separates when the bullet impacts the target. On the other hand, the Hornady FMJ-ENC is more

heavily jacketed, and punches into targets without deforming or breaking the jacket.

Hornady FMJ-ENC bullets are carefully designed and manufactured to give superior functioning in semi-automatic handguns, and they deliver match grade accuracy!

HAP™ (Hornady Action Pistol) Bullets

Everything about the Hornady HAP™ bullet is engineered with the competitive action shooter in mind. We began with the legendary accuracy of our XTP™ bullet design, then refined it into the perfect competition projectile. While the XTP™ uses folds and a cannellure to aid in controlled expansion and terminal performance, those factors are meaningless in competition. So, the folds and cannellure are gone from the HAP™ bullet, leaving only a sleek and balanced projectile that flies straight and flat.

And, because jamming can cost a competitive shooter the match, we've placed the HAP™'s pure lead core inside a copper jacket that protects the nose and ensures smooth feeding. Like the XTP™, the core of the HAP™ bullet is cold swaged from pure lead to provide amazing consistency, balance and stability in flight.

1) BUILT FOR COMPETITION

Expansion isn't an issue in action pistol shooting, so we removed the expansion-aiding features like the skives and cannellure. The result is a bullet that delivers the accuracy its sleek appearance promises.

2) NO EXPOSED LEAD

A jam can cost the match for a competitive shooter, and that's why our copper jacket protects the nose of our HAP™ bullet. The design ensures smooth feeding every time.

3) SWAGED CORE

The core of the HAP™ bullet is cold swaged from pure lead to deliver consistency, balance and stability in flight. It delivers peak, pinpoint accuracy on every shot.

4) DRAWN COPPER JACKET

The copper jacket protects the nose and ensures a smooth and quick feed into your gun.

Hornady's Frontier™ ammo and Cowboy bullets are just what you'd expect from a company born and bred in the heart of cowboy country.

For cowboy shooters, authenticity is a strict requirement. That's why we load our Frontier™ ammo to SASS (Single Action Shooting Society) specifications, and why we hold them to the same stringent production standards as all our products.

But it's the Hornady Cowboy bullet design that really sets Frontier™ ammo apart from the herd. Hornady's Cowboy bullets are swaged lead, not cast. That guarantees total uniformity and balance for increased accuracy. The special knurling holds an even distribution of lubricating wax over the entire bearing surface.

Crimp-On Gas Checks

If you cast your own bullets, our crimp-on gas checks will enhance their performance. During sizing, the gas check crimps to the base of case lead bullets to seal gasses and protect the base from deformation. Hornady gas checks are the only real choice for bullet casters.

F E A T U R E S

FRONTIER™ AMMO

Loaded to SASS specifications with authentic Hornady Cowboy bullets.

FLAT POINT COWBOY BULLETS

The flat point shifts the center of gravity to the bullet's rear for increased stability and accuracy. This ensures proper positioning in authentic revolvers, with no unwanted nicking of primers as the cylinder turns.

SPECIAL KNURLING AND GREASE RING

The knurling system holds an even distribution of lubricating wax over the bearing surface of the Cowboy bullet. The grease ring catches wax as the bullet travels through the barrel. The result is less leading.

Lead Pistol Bullets

Hornady lead pistol bullets are pre-lubricated, extra-hard and cold-swaged for total uniformity and balance. Our exclusive knurling system retains lubricant over the entire bearing surface to reduce leading in your barrel.

AMMUNITION

All other lever loads are pointless!

444 Marlin

Description	Item #
265 gr. LEVEREVOLUTION	82744

NEW!

Wayne van Zwoll took this elk at 55 yards. Wayne says: "He was a very big bull, and I fired three times, though the first bullet was lethal. You don't take chances with elk in heavy cover." Wayne was shooting our LEVEREVOLUTION in a stainless Marlin 336 in .30-30, scoped with a 2.5 - 8x Leupold.

In the past, lever guns were engineered to function ammunition loaded with blunt profile bullets. LEVEREVOLUTION's revolutionary new bullet design may require a newer magazine follower to provide best possible functioning of the last round out of the magazine. These magazine followers may be purchased from the manufacturer of your firearm.

For optimum performance we do not recommend storing LEVEREVOLUTION ammunition in tubular magazines for extended periods, as this can result in tip deformation.

LEVEREVOLUTION™

Turn your "brush gun" into a truly devastating long range performer!

LEVEREVOLUTION™ is the most exciting thing to ever happen to lever gun ammunition. Hornady, the leader in ballistic technology, brings you an innovation in ammunition performance featuring state of the industry elastomer Flex Tip™ Technology that is SAFE in your tubular magazine. Its higher ballistic coefficient delivers dramatically flatter trajectories for fantastic downrange energy increases and amazing bullet expansion at all ranges. It truly is an Evolution in lever gun ammunition!

- Up to 250 feet per second faster muzzle velocity than conventional lever gun loads
- Exceptional accuracy and overwhelming downrange terminal performance
- Patent Pending Evolution™ bullet featuring elastomer Flex Tip™ Technology
- Up to 40% more energy than traditional flat point loads

Expansion: With higher retained energy downrange, the LEVEREVOLUTION hits hard and expands rapidly for deep, wide wound channels. Wound cavities are nearly 50% larger from the muzzle out to 250 yds. than with flat point bullets.

30-30 Winchester 160 gr. Evolution™ 200 yd. Bare Gelatin Max Temporary Cavity Diameter: 4.75"

Jason Hornady took this Caribou with Hornady's new 30-30 LEVEREVOLUTION Ammunition.

Jim Wilson, editor at Shooting Times Magazine, took this nice Utah elk with our new 444 Marlin LEVEREVOLUTION ammo.

Dave Emery, Hornady engineer, put the 30-30 LEVEREVOLUTION to work when he dropped this New Mexico Antelope from 246 yds.

FEATURES

1) ELASTOMER FLEX TIP™

This high-tech elastomer tip dramatically improves the ballistic coefficient, while still providing shock-absorbing safety in the magazine.

2) EVOLUTION™ BULLET

The Evolution bullet provides a higher ballistic coefficient and affords dramatic velocity increases over traditional flat point loads! It also delivers devastating terminal performance over a wide velocity range.

3) PROPELLANT

New propellants provide up to 250 fps more muzzle velocity at safe pressures, resulting in flatter trajectories and up to 40% more energy.

4) CASE AND PRIMER

Like all Hornady ammunition, our LEVEREVOLUTION rounds use the highest quality cases and primers available. Consistent components translate to consistent shooting in the field.

FEATURES

1) TOP PERFORMING
HORNADY BULLETS

Loaded with Hornady bullets that deliver the terminal performance law enforcement and military professionals trust

2) REVOLUTIONARY BLACK
NICKEL-COATED CASES

Eliminate the potential for corrosion and improve feeding in all firearms.

3) SPECIAL PROPELLENTS

Propellents are engineered to protect your night vision by minimizing muzzle flash.

5) PRIMERS

Like the powder, the primers we select are the highest quality available, perfectly matched to the load.

Personal defense demands
superior ammunition.

Protecting the safety and security of your family requires ammunition that is accurate, deadly and dependable.

Hornady ammunition is the brand of choice for tactical teams, snipers and police officers throughout the world because it performs flawlessly. Now you can have the same reliable ammunition technology for your personal defense needs.

Hornady's new family of TAP™ For Personal Defense (TAP FPD™) ammo is superior tactical ammunition designed specifically for protection from deadly threats. TAP FPD™ is engineered to deliver reliable and consistent performance every single time.

Dave Fortier sent us this awesome group he produced shooting our 155 gr.TAP FPD cartridges. He writes, "This is your Steyr SSG 04 on TAP-FPD...any questions?"

RIFLE:

223 Rem | 308 Win

Exceptionally accurate and consistent, TAP FPD™ rifle ammo offers enhanced terminal performance with rapid expansion and fragmentation resulting in dramatic wound cavities and a reduced risk of over-penetration.

223 Remington

Now, varmints really don't have a prayer!

Varmints better make their peace before you buy a box.

Are you one of the fence-sitters – still trying to decide whether to buy a 17 caliber rimfire gun? Well, this should help make up your mind! The Hornady 17 Mach 2® is bringing a whole new element of fun to rimfire shooting – the fun of going through box after box of high-performance ammo that's economical to shoot.

You've already heard how the introduction of Hornady's 17 HMR® opened up a whole new world of fun for shooters, producing 50 and 100 yard groups that would fit under a dime or nickel. Prairie dogs and other small varmints, even bobcats and coyotes, that have been taken with a single shot.

The 17 Mach 2® provides tack-driving accuracy and a laser-like trajectory that's nearly seven inches flatter at 150 yards than a standard High Velocity 22 Long Rifle cartridge! It also

features 2,100 fps velocity, far outperforming a standard High Velocity 22 Long Rifle.

Best of all, you can shoot box after box of the economical Hornady 17 Mach 2® without shooting a hole in your budget.

So, grab a box (and another two or three). The 17 Mach 2® will give you the opportunity to send more varmints to Kingdom Come than ever before!

Colton Rommel found his 17 Mach 2 the perfect ammo for taking this excellent bobcat.

Alex, a Team Hornady member, shot these three foxes and eleven rabbits during a single morning hunt shooting his brand new Remington 504 loaded with 17 Mach 2 ammo. He says, "One of the foxes was shot at 130 meters with a head shot. The 17 Mach 2 is a brilliant round."

Performance in the Real World

There's a lot to be said for controlled tests and scientific measurement, but one of our Hornady engineers decided to take the 17 Mach 2 and 17HMR into the real world where shooters like you use them every day. Shooting the 17 Mach 2 and 22 LR cartridges side by side at a local shooting range produced the same kind of results the scientists measured in controlled conditions – tighter groups at all distances:

4		3		2	
TEMP.			TIME		
E-MODEL			SERIAL NO.

grains	PRIMER			GRC	

Douglas Dickens "If you have shot for a while you'll eventually notice a bug crawling on your target. And, if you are like any other shooter, you cannot resist the temptation to shoot at the bug. After firing, the bug is gone but you're never sure whether or not you've hit it. Not so anymore. Pennsylvania black wasp taken with Hornady 17M2 17 gr. VMax @25 yards M8-4x Leupold BSA M12/15 Martini relined with Redman liner. I have to find me another scope, a 6x with A.O. Then I'll go for head shots!"

William Breighner was shooting targets with his 17M2 from the 50 yard line and a fly landed on it. Naturally, he decided he had to take the shot. He writes, "When I pulled the trigger, the fly just disappeared and a hole appeared where the fly was parked. I wasn't sure what happened, so I walked down range for a closer look. Now, if you look at the hole, you'll see the fly's leg and fragments on the target. Yup, hit it dead center!"
The evidence of his fly shot is in the sidebar to the right. →

The targets keep getting smaller, while the fun gets bigger and better!

17 HMR™

FEATURES

1) HARD-HITTING V-MAX™ TECHNOLOGY

The polymer tip of a V-Max™ bullet delivers more than tack-driving accuracy at long range – it also creates dramatic expansion on impact.

2) HONEST 200 YARD PERFORMANCE

The flat trajectory delivered by the 17 HMR™ makes it the most accurate long-range rimfire ever made.

3) SELECT BRASS

The uniformity of the Hornady 17 HMR™ case is equalled only by ultra-expensive match ammo, and case geometry helps provide this new cartridge's unequalled performance!

4) PROPELLANT

The powerful new propellants available today make the 17 HMR™ the most accurate, hardest-hitting rimfire cartridge available.

No Rimfire cartridge has ever achieved the kind of accuracy and hard-hitting velocity you'll get from the Hornady 17 HMR™.

That's because no cartridge has ever combined the ballistic efficiency of our V-Max™ bullet with the powerful new propellants that are available today. This cartridge delivers the kind of velocity and flat trajectory that will forever change your expectations of rimfire accuracy! The 17 HMR™ began as an experiment by a Hornady engineer who wanted a better varmint ammo for his own use.

Since the introduction of the 17HMR™, more firearms have been introduced by more manufacturers than any other cartridge since the 22 Mag.

Frank, a Team Hornady member, emailed this photo and writes, "My brother and I counted down from three and shot this badger at about 120 yds."

"The squirrels don't have a chance with the 17 HMR," says Riley Jones, who enjoys hunting with his Marlin 17.

Bonded core technology in a high-performance factory load.

Hornady's Custom InterBond™ rifle ammunition takes one of the finest bullets ever made and brings it together with carefully selected brass, primers and powder to create an extremely effective hunting cartridge. Our InterBond™ bullet has quickly become the standard by which all others are measured for effectiveness, penetration and weight retention.

Steve Comus shared an experience with Hornady 308 150 gr. InterBond ammo on a recent sitka blacktail hunt in Alaska. The range was around 180 yards; one shot and the deer dropped in his tracks. Steve writes, "what the bullet did inside the deer was fascinating." The deer measured 92-5/8", an exceptional blacktail.

Stefan Bader harvested this Red Hartebeest from 251 yards, using a 300 Win Mag, 165 gr. InterBond ammo. The bullet was found under the skin on the exit side. It retained 70% of its weight.

AMMUNITION

Phil Shoemaker states, "After testing your ammo for my article on the 458 Lott in *Rifle* magazine I used the remaining 458 Win ammo during our Brown Bear season. It is superb. I have been a Hornady fan for thirty years and your round nosed InterBond bullets set a new benchmark standard for dangerous game bullets."

Custom™ SST™

Hornady's Custom SST™ Rifle Ammunition brings the performance of handloads to a factory cartridge.

Hornady Custom SST™ rifle ammunition combines the highest quality brass, primers and powders with our Super Shock Tip™ (SST) bullet to deliver peak performance from a factory load. The SST™ bullet features a polymer tip that reduces drag, improves aerodynamics and delivers a high ballistic coefficient for flat trajectories. Upon impact, the tip initiates expansion for wide, deep wound channels and sure kills.

Each component of our Custom SST™ Rifle ammunition is specially selected to give maximum performance. Brass, primer, powder and bullet work together to create a truly amazing factory load.

Like all Hornady Custom Rifle ammunition, the SST™ cartridges will outperform handloads nine times out of ten, letting you spend your time in the field instead of at the reloading bench. The final result is a factory load that you'd be proud to call your own!

Rosemarie Dvorchak found success the first day of the Pennsylvania deer season using a T/C Encore and Hornady 270 Win, 130 Grain SST ammo. She dropped this 8 point, and writes: "Was dead before he hit the ground." As a school principal, Rosemarie has the opportunity to teach others about safe hunting and gun ownership.

Nancy Allender took this nice Chamois buck while on a hunt in New Zealand; shot from 250 yards using Hornady's 270 130 gr SST Light Mag.

Roger, a Team Hornady member, says two feet of new snow on opening day of moose season was no problem – as a matter of fact it helped him track this bull. One shot with his Hornady 162 grain SST 7mm Mag was all it took. Roger writes: "I hit him in the brisket and we found the bullet by the left rib cage in one piece."

If you enjoy reloading, you'll find Hornady Cartridge Cases on page 44 and SST Bullets on pages 5 and 6.

Bill Gabbard writes: "This fine Eastern Kentucky Whitetail hit the ground like a ton of bricks when smacked with a fast moving 154 gr. bullet from my 700 Remington.

Bill Cavazos calls this "the longest shot I have ever tried and taken." Bill says, "The big bull did not even take one extra step. He dropped on all fours and rolled over. The bullet entered between the top of his shoulders and that was it. My brother in law, who was spotting for me, could not believe how quick he went down."

Hornady's Light & Heavy Magnum™ ammo deliver flatter trajectories and higher velocities.

Higher velocities are only the beginning of the benefits you get from Hornady's line of enhanced performance ammunition. With extra velocity comes extra power from both your standard and magnum rifles, but the best part is this: You get the extra power without any of the added heat and pressure that shortens the life of your favorite gun. That's because Hornady achieves higher velocity by combining a special cool-burning powder with a revolutionary loading technique.

Light/Heavy Mag SST™

Hornady's SST™ Light Magnum™ and Heavy Magnum™ ammo deliver flatter trajectories and higher velocities.

Higher velocity means more power, a flatter trajectory and sure kills. That's the magic of Hornady's Light/Heavy Mag SST™ rifle ammunition. By using a special, cooler-burning powder and revolutionary loading techniques to give you that added velocity without the heat and pressure that can shorten barrel life.

Hornady's Light Magnum™ ammo: a traditional bullet with modern power.

Higher velocities (up to 200 fps faster than standard ammo in some calibers) is only the beginning of the benefits you get from Hornady's full line of enhanced performance ammunition.

With extra velocity comes extra power from both your standard and magnum rifles, but the best part is this: You get the extra power without any of the added heat and pressure that shortens the life of your favorite gun.

That's because Hornady achieves higher velocity by combining a special cool-burning powder with a revolutionary loading technique.

Dunkin Allred killed this nice Scimitar Horned Oryx using our 280 Remington, 139 gr. SST Light Mag ammo at 150 yards.

Jeff Wooten of Dyed in the Wool Outfitters took this nice bull elk while hunting in the Colorado Rockies. He was shooting our 308 Winchester 150 grain SST Light Magnum ammo. Jeff said "The bull didn't even take a step, it just dropped right there. What the bullet did to that elk was amazing."

Hornady's match ammunition is so incredibly accurate, you might think it's a handload.

We achieve that level of success by hand-picking every component to ensure uniformity. Then the cases, powder, primer and match-grade bullets are loaded to stringent specifications to provide pinpoint accuracy – shot after shot.

Each cartridge is loaded with either Hornady A-MAX™ bullets or our high-performance boattail hollow points. Both represent the cutting edge of match bullet technology and accuracy.

Loads designed, tested and shot in competition by the engineers who design them add up to a cartridge worthy of the world's best shooters.

Match

FEATURES

1) TOP PERFORMING HORNADY MATCH BULLETS

Hornady match rifle ammunition is loaded with the most accurate, consistent match bullets in the world: our sophisticated boattail hollow point match bullets and our technologically advanced A-MAX™ match bullets.

2) SPECIALLY SELECTED CASES

Cases are hand selected based on strict criteria: wall thickness uniformity, internal capacity, case weight and consistent wall concentricity. We get proper bullet seating, consistent charges and pressures, optimal velocity and repeatable accuracy.

3) HAND INSPECTED

The loading process for our match rifle ammo begins with hand selected components and is completed with a final hand inspection.

4) POWDER

Powder is matched carefully to each specific load for optimal pressure, velocity and consistent accuracy.

5) PRIMERS

Like the powder, the primers we select are the highest quality available, perfectly matched to the load.

Custom™

FEATURES

1) HIGH PERFORMANCE HORNADY BULLETS

All Hornady Custom™ pistol ammo is loaded with either the famous Hornady XTP™ (Extreme Terminal Performance) bullet or our new fully-encapsulated FMJ. Both are supremely accurate, and both deliver dependable knockdown power.

2) SELECT CASES

Hornady produces much of the brass for Hornady Custom™ pistol ammo. All other brass is chosen to ensure it meets our unusually high standards for reliable feeding, corrosion resistance, proper hardness and the ability to withstand maximum chamber pressures.

3) POWDER

Each powder is matched with each load to ensure optimal pressure, velocity, volume, consistency from lot to lot, and accuracy. We use only the highest quality powder, and each new lot is double-checked for consistency.

4) PRIMERS

Like the powder, each primer is carefully matched to its load. All are chosen for their ability to quickly, completely, and reliably ignite the powder charge.

Hornady's Custom Handgun ammunition starts by meeting the demands of the hunters and shooters who design the cartridges.

Carefully chosen components matching brass, powder, primer and our Hornady XTP™ and fully encapsulated FMJ bullets all come together to achieve top accuracy and performance.

Hornady's Custom™ handgun ammunition is all that you'd expect from Hornady: Hard hitting, deadly, accurate and proven. Try some in your favorite handgun today.

Hornady rides tall in the saddle for Cowboy Action Shooting.

Cowboy Action Shooters demand total reliability from their ammo – and Hornady delivers! Like all Hornady ammo, our Cowboy Action rounds are engineered to perform flawlessly. Thanks to our swaged bullets, the projectile flattens at the target instead of fragmenting. Our propellants are the cleanest burning, and the diamond knurling means the bullet is lubed the entire length of the bearing surface. It all adds up to the highest quality cowboy ammo on the market.

Jerry Geipel writes, "I killed this eight point buck with one shot of my 357 Magnum using Hornady 158 grain JHP bullets."

Ron Smock took this nice 250 lb, 10-point buck with a S&W.460XVR at 50 yards on the second day of the Illinois gun season. Ron says, "He only ran 25 yards before he crashed."

Gary Dowdy took this seven foot alligator using his Glock 19, 9X19mm loaded with 147 gr. Hornady XTP.

Cartridge Cases

It's easy to think of brass as nothing more than a commodity – but there is a huge difference between cases. With Hornady brass you'll get more reloads, greater consistency, predictable performance and accuracy that commodity brass simply cannot deliver.

Hornady builds cases with the same precision, attention to detail and focus on perfection that has made us a world-leader in bullets and ammunition. We measure for consistent wall concentricity and we run our cases through pressure calibration tests to ensure uniform case expansion. And, taking quality control to the extreme, each and every case is hand inspected.

Thanks to this kind of manufacturing care, Hornady brass will ensure proper seating of the bullet, both in the case and in the chamber. It means consistent pressures, and ultimately yields optimal velocity and repeatable accuracy.

Find Hornady's legendary cartridge reloading manuals on page 61.

FEATURES

TIGHT WALL CONCENTRICITY

Concentricity helps to ensure proper bullet seating in both the case and the chamber of your firearm. Higher concentricity also aids in a uniform release of the bullet on firing, for optimal velocity and accuracy.

UNIFORM CASE WALL THICKNESS

Benchrest shooters have long known that uniform case wall thickness is vital to accuracy. We manufacture to extremely tight tolerances to ensure this critical element is as consistent as possible.

MORE RELOADS PER CASE

We treat Hornady brass as the foundation for an accurate cartridge, not a commodity. Because we take greater care in its creation you'll get more reloads from Hornady brass.

CONSISTENT WEIGHT AND CAPACITY

Every single Hornady case, regardless of the lot in which it was produced, is virtually identical to other Hornady cases in the same caliber. For you, this means consistent pressures, velocity and accuracy — every time.

FEATURES

SST BULLET WITH PREMIUM POLYMER TIP

The sharp point increases the SST's ballistic coefficient, allowing it to fly faster, farther and on a flatter trajectory. On impact, the tip initiates expansion at all velocities.

UNMATCHED ACCURACY

The SST Shotgun Slug delivers true, 200 yd. accuracy. Get sub-2" groups at 100 yards. No other slug gun ammo can come close to the performance of the SST.

HARD HITTING TERMINAL PERFORMANCE

The SST Shotgun Slug packs a target-dropping punch! The 12 ga., 300 gr. SST delivers a crushing 1793 ft/lbs of energy at 100 yards; and the smaller, 20 ga., 250 gr. SST an impressive 1200 ft/lbs of energy at the same distance.

Finally, long range accuracy from a shotgun slug!

Hornady's SST Shotgun Slug takes the proven performance of our super-accurate SST bullet and transforms your favorite rifled barrel slug gun into a weapon that outperforms some centerfire rifles. In both 12 ga., and now the NEW 20 ga. cartridge, Hornady's SST Shotgun Slugs deliver sub-2" groups at 100 yards; in addition to the flattest trajectory on the market.

The polymer tip of Hornady's field-proven SST helps it slice cleanly through the air, minimizing drop and wind drift. That same tip also initiates violent expansion on impact, transferring hard-hitting energy for a swift kill.

Put all the amazing performance characteristics of the SST bullet in your favorite slug gun. It will, literally, revolutionize your slug hunting experience.

Wayne Catto took a hunting trip to Michigan in search of Russian Herd Boar. He was using our SST Shotgun Slug in his 12 gauge rifled barrel shotgun, and shot this 374 lb. trophy from 65 yds.

Richard Bonebrake of Pine County Illinois took this nice buck from 188 yards with Hornady's 12 gauge SST Slug.

Designed for use in fully rifled barrels only.

SST™ is a trademark of Hornady Manufacturing Co.

Elton Jeans killed this buck opening day. He says the buck was in thick cover watching a doe when he finally got his crosshairs on it at about 75 yds. The 300 gr. SST Slug did its job. "A truly awesome weekend. Thanks!"

Gene Wooters dropped this 170 class from over 130 yards using his Benelli and Hornady SST Slugs. He writes "We have been in the gun business for over 35 years and can attest to the fine products Hornady supplies."

Dan Wallace from Team Backwoods shot this nice Whitetail Buck with Hornady SST Slugs.

There's a reason it's called "buck" shot.

Buckshot has been used in deer hunting for generations, and in many areas it's still one of the most exciting hunting seasons of the year. Top quality, well-designed shells are very effective within their range limitations and our Light Mag™ Buckshot, loaded in a red case, delivers a velocity of 1,370 fps and is the best of the bunch.

Hornady Buckshot Light Mag™ delivers reliable functioning, consistent performance, and the tightest patterns possible without modification to your shotgun. If you hunt deer, pigs or varmints with a smooth bore shotgun, test a box of Hornady Light Mag™ Buckshot – and prepare to be impressed!

FEATURES

1) LOADED WITH THE SST-ML™ BULLET

The SST-ML™ delivers inline performance that rivals centerfire rifles, and is the only muzzleloading bullet that can claim true 200 yard performance. The polymer tip increases the ballistic coefficient and initiates expansion to twice its diameter.

2) SABOT IMPROVES PERFORMANCE

Even before it leaves the barrel, the sabot Hornady SST-ML™ outperforms non-saboted bullets – engaging the rifling better, reducing recoil and improving accuracy.

3) SABOT “TAIL” LETS YOU PRELOAD YOUR PELLETS

Lock on three Pyrodex™ or Triple Seven™ pellets (or trim the tail to lock on two pellets) for fast loading in your inline muzzleloader. It makes loading and reloading your blackpowder rifle fast and convenient.

Hornady's patented Lock-N-Load Speed Sabot™ offers the ultimate in performance and convenience!

The Lock-N-Load Speed Sabot™ is the closest thing yet to bringing the convenience of cartridges into the muzzleloading world. They allow you to preload pellets onto Hornady's exclusive SST-ML™ bullet – providing a convenient way to accomplish fast loading and reloading of the most accurate and deadly blackpowder projectiles ever developed.

When compared to “easy loading” alternatives, like PowerBelt™, the Lock-N-Load Speed Sabot™ flies flatter, hits harder and expands better. Even

before it leaves the barrel, the sabot Hornady SST-ML™ outperforms PowerBelt™ by engaging the rifling better and delivering the kind of accuracy you deserve from your inline muzzleloader.

US Patent #6895865
Pellets not included

The Hornady Lock-N-Load Speed Sabot™ comes in a double pack that includes two separate moisture-resistant 5-load field packs.

50 Cal. L-N-L Speed Sabot™ w/45 250 gr. SST-ML**No. 67275**

50 Cal. L-N-L Speed Sabot™ w/45 300 gr. SST-ML**No. 67265**

(Pellets not included.)

3 Pyrodex™ or Triple Seven™ Pellets (150 gr. equivalent)

	Velocity (fps) / Energy (ft/lb)						Trajectory Tables

Zero your rifle 3" high at 100 yards for a 6" shooting window to 200 yards with 3 pellets or 150 gr. charges. All data developed in a stock T/C Omega inline muzzleloader.

Hornady Engineer, **Greg Palkowitsh** took this Southwest Kansas mulie from over 150 yards with Hornady's 250 gr L-N-L Speed Sabot.

Robert Gates shot this deer from 60 yds., using our L-N-L Speed Sabots. Robert writes, "The bullet traveled through both lungs, caught a piece of the heart, and lodged under the skin on the other side."

Joe Thielen, a Hornady engineer, took this awesome Nebraska Whitetail with a T/C Omega & 250 gr. L-N-L Speed Sabots.

Hornady's SST™ muzzleloading bullets are so accurate, you can shoot with the same confidence you have with a centerfire rifle!

By bringing our Super Shock Tip™ (SST™) premium polymer tip technology to muzzleloaders, Hornady has truly brought centerfire-like performance to muzzleloading rifles. The sabot allows you to use a lighter bullet for longer shots, while the SST™ bullet improves the ballistic coefficient for a faster, flatter flight. And, like our other SST™ bullets, the polymer tip initiates expansion on impact, giving these muzzleloading projectiles the ability to create a wide, deep wound channel for improved terminal performance.

By shooting the SST™-ML™ from your muzzleloader, you will deliver a projectile that penetrates better, retains more weight, and expands more aggressively. It all adds up to a deadlier, more accurate muzzleloading!

- 45 cal. Sabot w/40 200 gr. SST-ML **No. 67132**
- 50 cal. Sabot w/45 250 gr. SST-ML **No. 67272**
- 50 cal. Sabot w/45 300 gr. SST-ML **No. 67262**

Go/No-Go Gauge Kit

Our Lock-N-Load Speed Sabots™ are designed to work best in barrels of .500" to .502". Hornady's Go/No-Go Gauge Kit will help you determine if the bore of your muzzleloader is in the proper size range to work optimally with our Lock-N-Load Speed Sabot.™ **No. 6687**

Ramrod Tips

Our muzzleloading ramrod tips are specially designed to protect the tip of Hornady's SST-ML™ and Great Plains™ bullets. These ramrod tips eliminate any possibility of damage while seating the bullet.

F E A T U R E S

PREMIUM POLYMER TIP

The sharp point of the SST™ increases the ballistic coefficient, delivering faster and flatter shooting. On impact, the tip is driven back into the projectile, initiating controlled expansion at any velocity.

SABOT IMPROVES PERFORMANCE

The sabot protects the bullet as it travels through the barrel and engages the rifling, then falls away after exiting the rifle. It allows you to use a lighter bullet for longer, flatter shots and less recoil.

BETTER TERMINAL PERFORMANCE

Hornady's blackpowder SST™/sabot bullet achieves controlled expansion with less fragmentation—delivering better penetration, higher retained weight, and improved ballistic coefficient.

XTP™ with Sabot

FEATURES

CONTROLLED EXPANSION

XTP™ bullets are famous for their ability to expand reliably across a wide range of velocities. The XTP™ MAG™ bullet was specially built to withstand incredible velocities, and still deliver controlled expansion and weight retention. Special features in the nose facilitate and control expansion on impact. Others, like the cannellure, ensure the jacket and core remain locked solid during expansion.

TERMINAL PENETRATION

XTP™ and XTP™ MAG™ bullets consistently deliver the deep, terminal penetration needed for one-shot kills.

SUPERB ACCURACY

The XTP™ is one of the most accurate pistol bullets ever made, and it's just as accurate in your muzzleloader. Good shooters with quality barrels can consistently achieve sub 1½-inch groups at 100 yards.

SABOTS ENHANCE ACCURACY

The plastic sabot protects the bullet as it travels through the barrel and engages the rifling, then falls away after exiting your rifle. Sabots enhance the extreme accuracy of the XTP™ bullets.

EASY TO LOAD

No additional lubricants or patches are necessary with Hornady's XTP™ bullet/sabot combinations. Because they load easier, you can reload for fast follow-up shots.

Hornady's .45 caliber, 240 grain XTP™ MAG, .50 caliber Black Sabot, and 150 grains of Triple 7 delivers a blistering 2225 fps muzzle velocity!

John Tasker shot this buck at a distance of just less than 20 yards using our XTP 300 gr bullet. The bullet entered at the flank, went through two ribs on the right side then traveled through a rib on the left side, through the shoulder blade, then came to rest between the hide and the shoulder. John writes, "The bullet mushroomed perfectly and retained 274 grains – 92%. All I can say is wow!"

The Hornady XTP™ MAG™ in 240 and 300 grain, along with the black sabot, were specially designed for hunting with today's high-performance in-line muzzleloading rifles. The XTP™ MAG™ bullet's heavy-duty precision construction delivers pinpoint accuracy and controlled expansion at the high velocities produced by 150 grain loads. Combine the XTP™ MAG™ with a black sabot, and you have the ultimate in black powder knock-down power and accuracy.

If you have a more traditional muzzleloader, you can get a huge step up in performance with our Hornady green sabots. Load up to two Pyrodex pellets or 100 grains of powder, and get the same benefit – accuracy and extreme terminal performance!

† 15 per box. All others 20 per box.

Sean Hawkins took this Cape Eland in Namibia with a shoulder shot at 50 yards using our Great Plains bullet in his Pedersoli double rifle. He writes, "Thanks for offering an effective full bore conical muzzleloading bullet that is reasonably priced and gets the job done."

The near perfect consistency and concentricity makes Hornady Round Balls accurate in the field.

You can count on Hornady Round Balls to be completely uniform in size, weight and roundness. Cold swaging from pure lead eliminates air pockets and voids common to cast balls. And the smoother, rounder surface of a Hornady round ball assures better rotation for consistent accuracy. It's our strict production procedures which give Hornady Round Balls the unsurpassed uniformity demanded by the world's best shooters.

Hard Balls and Plastic Patch

No. 6950

Hard Balls are created with the same exacting precision as our cold-swaged round balls. You can't load this ball with a conventional cloth patch, so we designed a special plastic patch that helps them fly true to target every time; plus, they're easy to load.

No. 6752 \$7.51

Great Plains™ Natural Muzzleloading Lube

Great Plains™ all-natural muzzleloading lube ensures accuracy and consistency from shot to shot and allows you to fire more rounds without having to stop and clean your barrel. It seasons the bore, inhibits rust and leaves no sticky residue. Use it as a patch lubricant or conical bullet lube.

No. 6690 \$6.85

Great Plains Bullets

The Great Plains bullet features a prescored, hollow point for controlled expansion; a short ogive to minimize bullet drag and increase the ballistic coefficient, and a bearing surface with three diameters to ensure optimum contact area and a snug fit for unmatched bullet rotation, stability and accuracy in flight.

The bullet's specially knurled grooves are pre-lubed with Hornady's Great Plains™ all natural lube for easier loading and cleaner firing. Each Great Plains bullet is cold swaged for optimum consistency, has a bore diameter base that makes the bullet easy to align with the barrel while still maintaining a tight fit, and the hollow base skirt obturates easily and seals with the bore on ignition of the propellant.

58	525 gr. Hollow Base Hollow Point	6640

PA Conical

It's the ideal choice for any hunter who wants to use a longer-barreled, slower twist firearm with a heavier, conical-style bullet instead of a round ball.

At 240 grains of solid, cold-swaged lead, this hard-hitting .50 caliber bullet has about 35 percent more weight than a typical lead round ball. On impact, it provides reliable terminal performance. The conical shape adds stability in flight for increased accuracy. The hollow base obturates easily, sealing the bore upon ignition for optimal velocity.

\$416³⁸LOCK-N-LOAD AP
No. 095100

Our five-station die platform is the most flexible, economical die platform ever invented! It's more convenient, and easier to use.

**A Reloader's
Dream Machine!**

The Lock-N-Load AP™

Hornady's Lock-N-Load AP™ is an automatic, five-station press with the most user-friendly and innovative patented quick tool change technology of all progressive presses. Our system switches dies, powder measure, check dies, bullet seaters or crimp dies without having to change the whole die head. Change one die or all with one quick twist. The Lock-N-Load AP™ comes complete with a full-size Lock-N-Load™ Powder Measure that will load anything from pistols up through most magnum rifle cartridges. The Lock-N-Load AP™ also includes a case activated powder drop, cartridge catcher and extra Lock-N-Load™ bushings.

FEATURES

1) LOCK-N-LOAD POWDER MEASURE

The Lock-N-Load™ Powder Measure is the only system that uses a full size powder measure that can be reset to another charge or powder with the push of a button. The unique inserts in the measure can be preset to the charge you use with the caliber you are loading. Push a button, change inserts and powder and you're ready to go. Inserts can be adjusted for almost any charge. The most flexible (and economical) powder system available for progressive presses. (With optional powder die you never have to readjust for a caliber conversion. It switches instantly.) See page 55 for more information. **No. 050069 \$76.08**

2) PRIMING SYSTEM

The primer slide in the shell carrier receives a primer at the top of the stroke and inserts in the case at the bottom of the stroke. The slide stays in perfect alignment, and is easily changed from large to small. Use the included primer pick-up tubes (large and small) to fill the primer tube. (Included with Lock-N-Load AP™.)

No. 095210 \$35.46

3) LOCK-N-LOAD™ BUSHING SYSTEM

Lock-N-Load™ lets you switch dies from one caliber to another or change out die stations and begin reloading again in seconds. Once set, dies are never readjusted again. Bushing locks standard 7/8"-14 dies rock-solid in perfect alignment. Remove dies, change powder measures or switch to another powder in just seconds.

4) CASE ACTIVATED POWDER DROP

This is included on our Lock-N-Load™ Powder Measure so you get a charge of powder only when a cartridge is in place. Works with any cartridge, pistol to magnum rifle, with nothing extra to buy and can be manually operated to check powder charge. Install the optional Lock-N-Load™ powder die for the fastest changeover of all progressive presses. See page 53. Also fits RCBS measurer.

5) FIVE-STATION DIE PLATFORM

Five stations allow for all the variables and still let you use your standard dies. You don't have to use a special die just for this press – most 7/8"-14 dies and 7/8"-14 powder measures will work. (Some progressive presses require their special measure or dies.)

Unlike our competitors, Hornady's one-piece die platform is stronger and lets you change dies without disassembling the platform itself.

6) CASE RETAINER

Quickly and easily remove and/or replace a case from the shell plate at any point in the cycle. Case retainer fits all calibers. When you change calibers, you don't need extra retaining buttons, just a shell plate and your regular dies.

7) AUTOMATIC INDEXING

This automatically advances shells to the next station with indexing as smooth or smoother than presses that cost twice as much. This very important feature rotates every half stroke which lessens the chance of powder spillage.

8) UNIVERSAL EJECTOR

Cases are automatically ejected into the included case catcher.

9) LARGE CARTRIDGE CATCHER

A large capacity catcher comes standard with the L-N-L AP™ Press. An extra large capacity catcher which holds up to 1/3 more completed cartridges is available as an option. **No. 480038 \$5.72**

DUST COVERS:

L-N-L AP **No. 095200 \$19.95**

L-N-L AP w/Case Feeder **No. 095203 \$22.72**

Lock-N-Load™ Automatic Case Feeder

With our high-volume case feeder, the Hornady Lock-N-Load AP™ just got faster. With the highest torque motor in the industry and an extra large case bowl, it can feed four times as many cases as other case feeders. In fact, you can reload hundreds of rounds per hour!

The NEW case feeder for the Lock-N-Load AP™ is the perfect addition for high-volume reloading.

Reload hundreds of rounds per hour.

Lock-N-Load AP
Case Feeder
No. 095300
\$311.30

1) ADAPTS TO YOUR EXISTING AP™ PRESS

This case feeder works with your present Lock-N-Load AP™ with the purchase of a sub-plate. Call Hornady for details.

2) CHANGEOVERS ARE QUICK AND SIMPLE

Reloading won't screech to a halt when it's time to change over – just a few seconds takes you from 9mm to .45/70.

3) FEEDS EVERY CARTRIDGE

If Hornady makes a standard shell plate for it, the cartridge will also feed through the hopper. (See shell plates listing on page 51.)

4) FAIL-SAFE CASE SLIDE MECHANISM

The design of the slide mechanism prevents damage from misfeeds.

5) EASILY DISENGAGES

Want to load single cases? The case feeder is easily disengaged.

6) CASE FEEDER PLATES

There are four feeder plates sold separately, so you only pay for what you need. (Plates shown below.)

7) V-BLOCKS INCLUDED

Case Feeder comes complete with six V-Blocks to ensure proper feeding of your cases into the shellplate.

Case Activated Powder Drop

The new and improved Case Activated Powder Drop has been re-engineered with quick change-overs in mind. The retainer spring has been re-engineered for smoother function than previous models and the powder drop only dispenses a powder charge when a case is present. Works with the Lock-N-Load AP™ or other progressive presses that use 7/8" x 14 threads.

No. 050073 \$54.95

ONLY \$16⁵⁵

Quick Change Powder Die

Designed specifically for use with the new and improved Case Activated Powder Drop this accessory makes changing over your LNL-AP faster and easier than ever! It allows you to preset dies for the quickest caliber conversion on the market. Includes lower bracket with guide bushing and lock ring. Our new Powder Through Expanders (above) work great with the Quick Change Powder Die.

No. 050074 \$16.55

Powder Through Expanders

NEW!

The new Powder Through Expanders (PTX) are an engineering genius. Designed to work in conjunction with the Case Activated Powder Drop, the new Expanders eliminate the need for a separate case mouth expander die on the LNL- AP progressive press (Hornady suggests you fill that station with the powder cop die, so you can ensure that each case is properly charged with powder.) **\$8.95 per expander**

Hornady Powder Cop

Install on your progressive press after the powder drop station to automatically check dropped charges. Checking powder charges on your progressive press can be difficult, and is sometimes ignored, even though it's a smart practice. Hornady uses a similar device on our own ammo manufacturing presses. It won't replace careful attention, but helps monitor the reloading process. Works with all powder types and calibers. **No. 050063 \$33.32**

Lock-N-Load™ Die and Conversion Bushings

Simply thread a Hornady Lock-N-Load™ Conversion Kit into your RCBS® Rock Chucker or other reloading press using a 1¼-12 thread, and you're ready to start using the Lock-N-Load™ System. It's the easiest way to get the most out of your reloading press. These bushings let you take advantage of Hornady's Lock-N-Load™ technology even if you own a competitive reloading press. The Lock-N-Load™ Conversion kit includes three die bushings and one conversion bushing.

Improved Shell Plates

The addition of a smooth radius to the mouth of each shell holder around the Shell Plate ensures smooth functioning – especially when the Shell Plate is used with the LNL Case Feeder. In addition, the bevel on the retainer spring groove helps keep the spring in place when inserting cases into the Shell Plate. Shell Plates for Lock-N-Load AP™ and Pro-Jector™ are available to fit the calibers listed, but there are other calibers you can load with our shell plates. They will also hold additional calibers with the same case head dimensions. (Custom plates are also available.)

Shell Plates: \$34.24 each

New and Improved!

Universal Shell Holders

New and Improved!

Our Universal Shell Holders are precision machined from solid steel then heat treated to perform flawlessly for the life of the press. Improvements include a wider mouth and a rounded edge at the opening to allow smoother case insertion. They fit all other Hornady accessories (Case Trimmer, Hand-Held Priming Tool, etc.) Hornady Shell Holders also fit most other brands of reloading presses. See complete listing of Shell Holders below.

Shell Holders: \$7.47 each

Extension Shell Holder

Used for forming long cases into short cases. Fits all rams designed for universal shell holder. Extension shell holder number corresponds with standard, removable-head shell holder number listed in the chart on page 51 of this catalog. **\$17.27 each**

\$129⁴⁴

LOCK-N-LOAD CLASSIC No. 085001

The Lock-N-Load Classic™ is the *only* single-stage press to feature quick change dies.

If you reload more than one caliber and want the ease and simplicity of a single-stage press, you want Hornady's Lock-N-Load Classic™. The Lock-N-Load™ Bushings make changing calibers with a single-stage press faster and easier than ever before. With just a quick twist, Hornady's Lock-N-Load™ technology lets you switch from one die to another...no screwing and unscrewing dies or die adjustments are needed. With the Lock-N-Load Classic™, you'll load more shells in less time than ever before.

FEATURES

1) LOCK-N-LOAD CLASSIC™ PRESS

Includes Primer Catcher and three Lock-N-Load™ Die Bushings. Dies and Shell Holders sold separately.

2) AUTOMATIC PRIMER FEED (OPTIONAL)

Includes both large and small primer tubes. Use with our Positive Priming System and there's no more fumbling with primers — priming is 100% hands off. Sold separately. **No. 070905 \$32.95**

3) EASY GRIP HANDLE

Large, ball-style grip reduces fatigue. The long handle increases leverage and reduces effort.

4) LOCK-N-LOAD QUICK-CHANGE BUSHING SYSTEM

Lock-N-Load™ lets you switch from one die to another and begin reloading in seconds. No threading dies in and out or adjusting is necessary. The positive locking action of the bushings holds the dies in rock solid, perfect alignment. The Lock-N-Load Classic™ is the only single-stage press with a quick-change die feature.

5) COMPUTER-AIDED/DRIVEN MANUFACTURING

The computer is capable of incredibly close tolerances, meaning you get near-perfect alignment of the ram and your dies. You'll also enjoy smooth operation and accurate positioning.

6) POWER-PAC LINKAGE AND SOLID STEEL ARMS

Arms rotate on steel pins that run completely through the cast frame. The Power-Pac linkage design multiplies the leverage you apply to the handle, making it easier to size cases and reducing user fatigue.

7) SUPER STRONG ANGLED FRAME

This high strength alloy frame offers the rigidity and stability needed for precision reloading, and is guaranteed never to break or fail. The frame's unique angle gives the reloader greater visibility and easier access to the cartridge in the press.

8) POSITIVE PRIMING SYSTEM (PPS)

The PPS ejects the spent primer at the top of the stroke, picks up a new primer and self aligns to feed and insert the primer at the bottom of the stroke where leverage is best. Our self-aligning primer arm also allows for easy manual inserting of primers without having to raise the handle. All the work is done at the bottom of the stroke. Works easier than ram prime units and much better than old-style primer arms.

DUST COVER No. 100008 \$19.95

**Lock-N-Load Classic
Reloading Kit**
No. 085003

Lock-N-Load Classic™ Kit

Just getting started in hand loading? There's no need to search for equipment or worry about what you're missing when you choose the Hornady Lock-N-Load Classic™ Reloading Kit. It comes with everything you need to turn out high-quality, accurate handloads, right from the start.

Handheld Priming Tool

The perfect companion to any single stage press ... Our new handheld priming tool features a new one-piece primer tray with an improved retaining system for the lid. It also features integral molded primer bushings for ultra reliable function and eliminates the need for separate bushings. The system comes with an additional tray designed for use with RCBS shell holders. The body has been modified for easier change-over. The seater punch and spring are captured inside the priming tool; allowing shell holders and primer trays to be changed without removing the spring and punch.

No. 0500021 \$41.59 (not included in kit)

New and Improved!

\$294⁹⁴50 CAL BMG PRESS
No. 085004**\$542⁰⁵**

50 CAL BMG PRESS KIT No. 085005

Lock-N-Load™ 50 Cal. BMG

Hornady's Lock-N-Load™ 50 Cal. BMG, allows you to reload own .50 BMG rounds with accuracy and precision. This single-stage press features our exclusive Lock-N-Load™ technology in the ram. With it you can turn your shell holder over to ram prime, then move the shell holder to the top plate. Once the holder and ram prime are set, they stay that way.

A quick change to a Lock-N-Load™ bushing makes switching over from ram prime to die use faster, too. Together, these features will significantly speed up and improve your .50 caliber BMG reloading.

Order the press by itself, or as part of our .50 BMG Press Kit, which includes the necessary .50 caliber BMG dies.

F E A T U R E S

1) SOLID CONSTRUCTION

You'll get years of reliable reloading from your Hornady .50 BMG Press.

2) .50 CALIBER BMG PRESS KIT

Includes the Hornady .50 BMG reloading press with Lock-N-Load™ technology, a complete set of Hornady .50 BMG reloading dies, and a 50 BMG shell holder.

No. 085005 \$542.05

3) FEATURES LOCK-N-LOAD™ TECHNOLOGY IN RAM

With it you can turn your shell holder over to ram prime then move the shell holder to the top plate. Once the holder and ram prime are set, they stay that way.

4) CONVERTS TO HOLD STANDARD DIES

.50 BMG Press comes standard with a 1-1/2" x 12" bushing to convert the die head to our L-N-L system which will hold any standard 7/8" x 14 die.

THE MOST VERSATILE PRESS YOU CAN BUY!

The 50 BMG Press is the only press that will load any cartridge from 25 Auto to 50 BMG. The press comes standard with a 1-1/2" x 12" bushing that converts the die head to our Lock-N-Load™ bushing system.

Install the Shell Head Adapter accessory in the ram and load any center fire cartridge you want. Especially useful for shooters reloading long cartridges which require a very long stroke.

No. 392172 \$30.33

*New and improved
Handheld Priming Tool,
see pg. 56*

50 Cal. Die Set

Created from select steel and heat-treated for durability and a lifetime of reloading, the Hornady Custom Grade™ New Dimension™ 50 Cal. Die Set is so well-crafted, it's guaranteed never to break or wear out from normal use. For smooth, precision reloading, you can count on Hornady.

No. 544460 \$304.45

50 BMG Primer Seating Gauge

Consistently seating primers used to be an art...but now it's science with the Hornady BMG Primer Seating Gauge. This precision instrument uses a dial indicator to measure the depth of each primer pocket and the height of each primer. That allows you to consistently seat the primer with the anvil just touching the bottom of the primer pocket every single time – letting you take full advantage of firing pin energy and get a truly consistent result. No. 050150 \$97.95

High Capacity Metering Kit

Load up to 265 grains of powder in a single drop with Hornady's High Capacity Metering Kit. The kit's two metering units have capacities of 80 to 180 grains and 165 to 265 grains of powder, and come with the clear drop tube and large hopper tube. The clear drop tube visually ensures a complete powder drop. An extended hopper tube is also included so you can reload more rounds between refills of powder. Fits Hornady Lock-N-Load™ Powder Measure.

No. 050126 \$67.95

50 Caliber Deburring Tool

Extra large diameter. Precision ground and made from all tool steel! The ultimate in 50 cal. accessories.

No. 050153 \$49.95

50 Caliber BMG Powder Measure

Includes an oversized hopper tube, 265 grain capacity metering unit and a see-through extended drop tube so you can confirm a complete powder drop into the case.

No. 050127 \$109.99

L-N-L™ Powder Measures

Hornady's Lock-N-Load™ Powder Measure lets you change powders and settings with the push of a button.

The Lock-N-Load™ Powder Measure offers the most flexible operation and the widest range of any measure on the market today. Not only can you switch powders and settings with a single button push, but add the proper accessories and the Lock-N-Load™ Powder Measure lets you meter charges from .5 to 265 grains of powder!

FEATURES

1) LARGEST CHARGE RANGE IN THE INDUSTRY

Go from .5 grains to 265 grains with the different inserts. Ours is the only measure designed to let you swap measuring inserts. Use one Lock-N-Load™ Powder Measure for reloading everything from small pistol cartridges to .50 BMG and large magnum rifle cartridges.

2) PUSH BUTTON RELEASE FUNCTION

To change metering inserts, just push the Lock-N-Load™ insert release button and insert another meter. Simply verify the new charge and you're reloading again right away. Lets you swap preset inserts in seconds. Go from reloading 30-06 to 45 Auto in no time. Keep the preset insert with your die set.

3) PRECISION TOLERANCE

At only .002" clearance between the drum and rotor, it's the tightest in the industry for a standard measure. It's your assurance of premium quality. Eliminates powder binding between the frame and drum.

4) MULTIPLE MOUNTING METHODS

Mount to your bench using standard 7/8"-14 thread or use our Lock-N-Load™ Bushings to mount this versatile measure on the Fast Load Powder Measure Stand or on the Lock-N-Load AP™ for automatic powder measuring during reloading. (Lock-N-Load™ Bushings sold separately on page 53).

5) ADJUSTABLE TENSION

The O-ring lets you put a slight amount of tension on the metering unit to make fine, incremental adjustments. Once you've set your charge, the lock ring will secure it.

6) SMALL AND LARGER DROP TUBES

These tubes speed up powder flow. Two drop tubes are provided standard for 22 to 45 caliber loads. Use the largest drop tube that fits the case mouth. An optional extended drop tube is also available. (See page 56).

.17 cal. Powder Sleeve No. 392703 \$6.23

No. 050069
\$76.08

Just push the button and remove the metering insert.

Pistol Reloading

NEW!

Pistol Rotor and Standard Metering Insert

For use in your L-N-L Powder Measure, this pistol rotor features a smaller chamber for more precise metering.
No. 050128 \$31.95

NEW!

Micrometer Pistol Insert

For extremely precise measurements, the Micrometer Pistol Insert allows you to dispense one grain at a time.
No. 050129 \$31.17

Powder Measure Metering Inserts

Switch these metering units in and out of your Lock-N-Load™ Powder Measure with just a push of a button. (Not compatible with the Bench Rest Grade or Black Powder Measure.)

Bushing Adapter No. 050122 \$10.35

Standard Metering Unit
(1 included with Lock-N-Load™ measure)
No. 050120 \$8.95

A Hornady Exclusive! Swaps with metering inserts so you can drain powder without removing the measure from its stand. (Compatible with Bench Rest Grade Powder Measure.)
No. 050125 \$11.65

Rifle Micrometer Metering Insert
No. 050124 \$31.15

Blackpowder Lock-N-Load™ Powder Measure

Hornady's all-metal Blackpowder Powder Measure features a non-sparking aluminum hopper and brass metering unit. It's designed specifically to meet the safety needs of handloaders working with blackpowder.

Features include:

1) ALUMINUM HOPPER TUBE AND CAP

The aluminum hopper won't develop a static charge, unlike plastic hopper units. When working with black powder, it's critical to avoid static electricity and any kind of sparking.

2) EXTREMELY TIGHT TOLERANCES BETWEEN DRUM AND ROTOR

The near 2000th of an inch tolerance eliminates binding of powder between the frame and drum for smoother operation with coarse black powder.

3) BRASS METERING UNIT

The all brass metering unit is graduated in common black powder volumes.

No. 050110
\$133.27

Bench Rest Grade Lock-N-Load™ Powder Measure

Hornady's Bench Rest Powder Measure gives you all the advantages of Lock-N-Load™ technology with the added benefit of more precise measuring. That precision comes from a specially designed metering insert and a smaller metering chamber to promote more consistent and uniform filling.

The micrometer adjustment gives positive reference for metering adjustments and you can install pre-set metering units by simply pushing the button on the outside of the metering chamber. All moving parts have been plated for protection and long life, and the rotor requires NO lubrication.

No. 050130 \$139.00

Fast Load Powder Measure Stand

The incredibly strong Fast-Load Powder Measure Stand has a rigid frame and extra long arm that lets you fill an entire 50-count Universal Loading Block. Accepts any measure with 7/8"-14 thread.

No. 050008 \$33.25

1) LOCK-N-LOAD™ BUSHINGS:

If you have more than one powder measure, you can switch them in and out of the Fast-Load stand in just seconds, using Lock-N-Load™ bushings.

2) LONG REACH:

Lets you bench-mount the powder measure and still drop powder in the loading block.

Universal Loading Block

This double side block helps you load quantities of nearly any caliber you choose. Fits magnum, 308 and 223 size case heads. Also works with Fast-Load Powder Measure Stand to reach every case in the block.

No. 480040 \$4.28

Extended Drop Tube

Lets you put more powder in the case. We discovered it's not only the long tube but also the orifice that makes the difference, so it fills the case slower. Use the smallest orifice the powder will flow through for best results.

No. 390699 \$39.95
Black Powder PM Extended Drop Tube
No. 490070 \$24.95

Hornady's Cam-Lock™ Trimmer

No other case trimmer in this price range features a micro-adjustable cutting head! Based on the proven design of our earlier case trimmer, this new model is packed with many features that Hornady customers have been asking for. *Note: Shell holders not included.*

No. 050140 \$84.27

Cam-Lock™ Power Trimmer Adapter

The power adapter for your Cam-Lock™ Trimmer allows you to use a battery-operated screwdriver or drill instead of muscle power to drive your trimming. The adapter replaces the hand crank for easy operation. **No. 050145 \$27.72**

F E A T U R E S

1) GET ACCURATE, CONSISTENT CASE LENGTHS

Thanks to the unique way the case is locked in place in the shell holder, all trim lengths are accurately measured from the base of the cartridge, with no variation due to rim thickness, etc. You get the same trim length every time.

2) USES STANDARD HORNADY SHELL HOLDERS & PILOTS

Uses Hornady's standard shell holder and the same pilots as our previous case trimmer (includes the seven most popular pilots – .22 cal., 6mm, .270 cal., 7mm, .30 cal., .38 cal., .45 cal.).

3) UNIQUE ONE FINGER CASE CAM LOCK

Just a light touch of the knob locks the case in place, rock solid. Just a touch releases it. No need to crank the locking knob. Holds the case square with the cutter for precision trimming.

4) LARGE DIAMETER, REPLACEABLE CUTTING HEAD

New, larger cutter trims cases up to .50 caliber in diameter. Made of ultra-hard, super-sharpened tool steel that keeps its edge practically forever. Easily removable for resharpening or replacement.

5) UNIQUE MICROMETER ADJUSTABLE CUTTER

The micrometer lets you change settings from longer to shorter in increments of 1/1000" without ever moving the case. This is an extra cost with other trimmers but is included with ours.

6) TALLER FRAME AND REDESIGNED HANDLE

The redesigned handle fits your palm, and the taller frame means you won't bang your knuckles on your bench when trimming. More ergonomic for faster trimming.

See a complete listing of Shell Holders on page 54.

Cam-Lock™ Chamfer/Deburr Tools:

Mounts in place of the cutter to speed the chamfering and deburring process. It also keeps chamfers and deburrs square with the case mouth.

No. 050147 \$33.15

Dust Cover

Helps keep your trimmer clean between uses. **No. 100016 \$19.95**

GS-350 Electronic Scale

Hornady's new electronic digital scale brings a new generation of precision and accuracy to all your reloading! The GS-350 is accurate to 0.1 grains/0.01 grams and is lightweight and easy to use. It features a portable carrying case, a calibration weight, advanced tare function, a large weighing tray and a one-year warranty! Includes two "AA" alkaline batteries. 350 Grain Capacity. **No. 050103 \$149.95**

GS-1000 Electronic Scale

Measure powder accurately to the nearest tenth of a grain with Hornady's GS-1000 electronic scale. Quickly calibrate using the 20 and 30 gram check weights and switch from grams to grains at the touch of a button. Powder Pan comes with handle/spout, four "AA" alkaline batteries and a 120 volt AC adapter. 1000 Grain Capacity.

No. 050105 \$179.95

Magnetic Reloading Scale

You'll get fast, accurate measurements to within 1/10th of a grain with the Hornady Magnetic Scale, available in grain or gram measuring models. This scale never needs a battery. Features include:

1) OVER/UNDER READOUT

The over/under feature gives you a quick check whether your charge is too light, too heavy or just right.

2) MAGNETIC DAMPENER

The dampener smooths the movement of the beam, for faster measurements.

3) CAST-ALUMINUM BODY

Heavy aluminum body creates a more stable measurement platform, and is long-lasting.

4) THREE POISE BALANCE

The three adjustable weights on our scale are easier to set and read than the small increments common to two-poise balances.

5) ALUMINUM PAN

The pan is aluminum to eliminate static and is designed for easy handling and pouring.

No. 050026 (Model "M" grain scale) **\$61.28**

No. 050027 (Model "G" gram scale) **\$67.41**

Scale Plus Kit

Precisely measure and adjust your powder charges with the Magnetic Reloader Scale, Powder Funnel and Powder Trickler – available as a set. **No. 050020 \$68.61**

Dust Cover

Helps keep your scale clean between uses. **No. 100026 \$19.95**

Measuring Accessories

Powder Funnel

A must-have for filling cases with scaled charges, checking weights and returning powder to the case. Anti-static funnel fits all calibers between 22 and 45. Squared design won't roll off table.

No. 586050 \$3.21

17 Caliber Funnel Adapter

(Sold Separately) Fits on the end of Hornady's funnel for the small 17 and the new 20 caliber necks. Also fits MTM and others.

No. 586055 \$8.32

Powder Trickler

Used to trickle that last few tenths of a grain of powder into a dropped and weighed charge for "0" variation. Unlike others, Hornady has a wide, stable base, is easy to clean, and uses a small amount of powder to fill.

No. 050100 \$12.51

Hand Held Priming Tool

The perfect companion to any single stage press ... our new handheld priming tool features a new one-piece primer tray with an improved retaining system for the lid. It also sports integral molded bushings for ultra reliable function.

The new primer tray also eliminates the need for separate primer bushings. The system comes with an additional tray designed for use with RCBS shell holders. The body has been modified for easier change-over. The seater punch and spring are captured inside the priming tool; allowing shell holders and primer trays to be changed without removing spring and punch.

Primer Tool: No. 0500021 \$41.59

New and Improved!

- 1) LARGE PRIMER TRAY**
Holds all primers right side up for proper feeding. For both small and large primers.
- 2) USES STANDARD HORNADY SHELL HOLDERS**
No need for another shell holder. Or use adapter for the RCBS™ shell holder.
- 3) ERGONOMIC, WHOLE-HAND ACTION**
Use your whole hand to squeeze handle, not just your thumb.

One Shot™ Products

One Shot™ Non-Hazardous Case Lube

This water-based lube evenly distributes lubricant without the greasy mess usually associated with resizing cases. It will not contaminate powder or primers and it will not attack plastic, paint and other finishes.

No. 9992 \$9.45

One Shot™ Non-Hazardous Metal Polish

For use with Hornady's Tumbling Media, this water-based, bio-degradable polish cleans, polishes and protects all metals except aluminum.

No. 9993 \$9.45

One Shot™ Gun Cleaner & Dry Lube

One Shot™ Gun Cleaner & Dry Lube reduces friction, cleans grit, grime, old oil and gunk from firearms, loaders and loading tools. It leaves behind a thin, dry lube that's impervious to heat, cold or buildup. One Shot™ Case Lube is also available in a non-toxic formula that works much like the original.

No. 9990 \$8.31

One Shot™ Case Lube Spray

No. 9991 \$8.31

Unique™ Case Lube

This all-natural lube is easy to use – a quick swipe as you pick up cases and it's done. **No. 393299 \$3.64**

Case Tumblers

Dirty brass contains abrasive foreign particles that can scratch the inside of your dies. Our case tumblers clean and polish brass to a brilliant finish before loading. Press and dies will operate smoother and finished reloads will look like new. Media sold separately.

1) Case Tumblers:

M-2™ Tumbler – Holds up to 500 .38 Special cases. **(110 volt) No. 050200 \$83.19**
(220 volt) No. 050201 \$94.68

2) Media Sifter No. 050208 \$12.44

3) Hornady Tumbling Media:

Media cleans and polishes cases. Use with One Shot™ Metal Polish. 1/4 gallon tub. **No. 050300 \$8.91**

4) One Shot Metal Polish:

Use with tumbling media to polish and protect cartridge cases. 8 fl. oz. **No. 9993 \$9.45**

Accessories

Neck Turning Tool

Hornady's case neck turning tool is the only one this price range with a cutter adjustable in 1/1000" increments. Designed to trim the outside of the case neck to absolute uniformity.

No. 041222 \$59.95

Mandrels sold separately

MICRO-ADJUSTABLE CUTTER: The cutter adjustment dial has graduated markings in 1/1000" increments for incredibly precise trimming of the outside of your case necks.

TOOL STEEL CUTTING BLADE: Keeps an edge practically forever, but can be removed for sharpening or a replacement blade. Precision ground bevel will not cut the shoulder of the case.

BUILT-IN BACKLASH: Special O-ring keeps tension on the cutter adjustment knob. The cutter stays exactly where you set it.

TURN CASES OF NEARLY ANY DIAMETER: With a wide variety of mandrels, Hornady's new neck turning tool can accept cases of virtually any diameter.

MANDRELS SOLD SEPARATELY:
See below. **\$9.95 each**

MANDRELS

Caliber	Item No.	Caliber	Item No.
17 cal.	391908	30 cal.	391928

\$9.95 per Mandrel

Dial Caliper

Precisely measure case and bullet length, inside and outside diameters, primer pocket depth overall cartridge length and more with Hornady's Dial Caliper. Includes protective case.

No. 050075 (inches) \$51.97 **No. 050070 (metric) \$51.97**

Micrometer

Calipers are good for measuring down to .001", but for actual bullet diameter for 1/10th of .001", you MUST use a micrometer. Also useful for checking expanders and any place an EXACT measurement is a necessity. **No. 050071 \$31.15**

Kinetic Bullet Puller

Removes bullets from cartridges without damaging the bullets. The hollow head captures the bullet and powder for reuse. Can be used on any rifle or pistol cartridges up to 45 caliber. **No. 050090 \$25.72**

Cam-Lock™ Bullet Puller

The fastest, easiest way yet to pull bullets with your press. Just clamp down and the bullet is out. Uses standard collets (sold separately, see chart below). **No. 050095 \$21.39**

Cam-Lock™ Bullet Puller Adapter

Upgrade your original bullet puller with our Cam-Lock™ adapter. Uses the same interchangeable collets (sold separately, see chart below). **No. 050094 \$17.52**

CAM-LOCK™ BULLET PULLER COLLETS \$10.00 each

Complete Case Care Kit

Buy this complete Case Care Kit at a substantial savings (the kit price saves \$19!). Includes items 1 thru 6 and three neck brushes for the following calibers: 22, 338-35 and 44-45.

- 1) Case Sizing Lubricant:** This is the classic no-fail method of lubricating cases. Just apply a few drops of Hornady sizing lubrication to your lube pad and roll cases over the pad to lube several cases at once. **No. 050009 \$3.64**
- 2) Universal Accessory Handle:** Fits all our case-neck brushes, and large and small primer pocket cleaning heads. **No. 190260 \$3.15**
- 3) Chamfering-Deburring Tool:** Prepares new cases for reloading by chamfering the inside edge and deburring the outside edge. **No. 050017 \$16.65**
- 4) Primer Pocket Cleaner Heads:** Clean primer pockets of fouling and prepare cases for more consistent, positive primer seating. **Lg. Head: No. 390753 \$4.99 ea. Sm. Head: No. 390752 \$4.99 ea.**

BRUSH SIZES

17 cal.	No. 380062
22 cal.	No. 380063
25 cal./6 mm	No. 380065
270 cal./7 mm	No. 380066
30 cal.	No. 380067
35 cal.	No. 380068
45 cal.	No. 380069

5) Case Lube Pad and Loading Tray: The lid pops off to reveal a universal loading tray and a case lube pad. Apply sizing lubrication to the pad, then roll cases over pad. **No. 020043 \$11.55**

6) Case Neck Brushes: Remove powder residue and foreign matter from inside the necks of your cases. (See chart for brush sizes) **\$2.19 ea.**

Primer Turning Plate

Orients all primer either up or down. A "must have" if you're using an automatic primer feed with a pick-up tube.

No. 050006 \$4.28

Chamfer/Deburr Tool

Prepares new cases for reloading by chamfering the inside edge and deburring the outside edge. **No. 050017 \$16.65**

Anneal Kit

Annealing previously fired cases can give you more uniform bullet pull for increased accuracy, and reduce work-hardening, which extends case life.

Hornady offers this annealing tool kit complete with three holders, for small, medium and magnum cases.

No. 041220 \$43.71

Tempilaq 2-Pack

No. 041225 \$23.40

Stuck Case Remover

Consists of #7 drill and 1/4 inch-20 tap. Remover body fits in universal shell holder ram of most any standard reloading press. No wrenches required. No chance of damaging size die. Fits most presses with universal shell holder ram.

No. 050033 \$14.71

Primer Pocket Reamer

Primer Pocket Reamer Package makes GI Brass reloadable by cutting away the primer pocket crimp. Complete with handle, large head and small head.

No. 041210 \$17.97

Extra reamer heads sold separately.

Easy Access Die Box

Every Custom-Grade New Dimension die set comes in a convenient box which lets you store fully adjusted dies, Lock-N-Load bushings, shell holders and a taper crimp die. This box can also be purchased separately for use with your current die sets.

No. 544600 \$4.00 each

Hornady Custom-Grade™ New Dimension™ Dies are the most advanced reloading dies available today.

Hornady's Custom Grade™ Dies provide a lifetime of reloading. They're so well-crafted that they're guaranteed never to break or wear out from normal use and now they're better than ever! The new Zip Spindle™ design features a series of light threads cut on the spindle and spindle collet. This design eliminates spindle slippage and takes the knuckle-busting out of tightening the spindle lock while making spindle adjustments a snap. Hornady's new Zip Spindle™ is nothing short of genius!

F E A T U R E S

1) NEW ZIP SPINDLE™ DESIGN

Provides precise fit by aligning the spindle perfectly with the center of the die. The new design features a series of light threads cut on the spindle and spindle collet which eliminates slippage and takes the knuckle-busting out of tightening the spindle lock.

2) WRENCH FLATS ON SURE-LOC® LOCK RINGS

Makes fine adjustments easy, and eliminates damage to rings that pliers can cause. Locking screw on Sure-Loc® ring clamps closed so the screw never contacts the threads.

3) HEADED STEEL DECAP PIN

Won't bend, crack or break, even when depriming cases with crimped primer pockets. Rugged design for long life but replaceable if something happens to it.

4) ELLIPTICAL EXPANDER POLISHED TO SMOOTH FINISH

Provides "smooooooooth" release from case neck. Reduces or eliminates neck stretch. Threads on so it can't pull loose. Also eliminates the need for a separate expander die for "necking up" to the next caliber.

5) ALL-STEEL SEATER ADJUSTMENT SCREW

Provides added strength and reduces thread wear. Easily adjusts for bullet seating depth.

6) COMPRESSION WASHER

Provides slight amount of tension to make fine adjustments easier, and holds setting once in place.

7) RETAINER RING

Removes easily for fast disassembly and cleaning of the die.

8) SLIDING ALIGNMENT SLEEVE

Holds the bullet, case neck and seating stem in alignment within the sliding sleeve BEFORE the bullet enters the neck of the case. Ensures the straightest bullet seating over fixed or solid die seaters.

9) BUILT-IN CRIMPER

Gives you the option of crimping without the need for an extra crimp die.

See a complete listing of Shell Plates and Shell Holders on page 54.

What you'll need to order a custom-made die:

- ✓ Cartridge Name
- ✓ Bullet Diameter
- ✓ Parent Case
- ✓ Three (3) Fired Cases
- ✓ Chamber Reamer Drawings
- ✓ Die Marking
(Up to 12 characters including spaces)

Please call for further information or to place an order.

800-338-3220

We will build any die for any cartridge – any time!

Need a die that we don't offer in our product line? Whether your firearm is an old English double or a new top-of-the-line match rifle, you can now have a perfect, precision die, custom-crafted to suit your needs!

Hornady Manufacturing now offers the advantage of making custom dies to your specifications. These custom-manufactured dies are available in either our Custom-Grade™ New Dimension™ (standard) or Match-Grade™ New Dimension™ die configuration, and can be made to load any cartridge.

Our custom-manufactured dies are made on precision CNC machines, that produce an exacting die to extremely tight tolerances. All we need is a chamber cast, three fired cases or a chamber reamer drawing.

Each custom-manufactured die is hand crafted for a perfect fit. Expander balls, shell holders, shell plates, trimmer pilots, bullet seating stems and alignment sleeves can be made to fit any bullet of any profile, lead or jacketed. These precision dies give the handloader total control over the loading process!

Lonnie Hummel, a Hornady technician, used Hornady 22-6mm dies to shoot this record 1000 yd. group at a bench rest competition in Aurora, Missouri. Lonnie oversees all Custom Die orders.

Get match-winning performance from your press with Hornady's Match-Grade™ New Dimension™ dies.

To get ultra-precise alignment and match-winning performance from your press, you'll want Hornady's Match Grade™ New Dimension™ Dies. The neck size die features interchangeable, self-centering neck size bushings (available in .002" increments) that eliminate the chance of over sizing your case necks and overworking the brass. Tight tolerances at the press translate into tighter groups at the range! See below for a listing of available dies and bushings.

Available in two styles; full-length sizing and shoulder bump neck size. Both styles feature interchangeable neck sizing bushings. Select the bushing your cartridge requires to complete your Match Grade™ Die.

RIFLE DIES Match Grade™

FEATURES

1) SELF-CENTERING SPINDLE

Free-floating spindle design ensures precise, concentric neck expansion.

2) KNURLED SPINDLE HOLDER

Makes changing neck sizing bushings fast and easy.

3) SPINDLE ADJUST WITH O-RING

Provides slight tension for fine adjustments, and holds setting once in place.

4) BUSHING DIES

Available in .002" increments, these bushings fully eliminate neck resizing problems. Tight tolerances here translate into tighter groups.

5) POLISHED ELLIPTICAL EXPANDER

"Smooooooth" release from case neck reduces or eliminates case stretch.

6) REPLACEABLE HEADED DECAP PIN

The replaceable decap pin is unique to the Match-Grade™ New Dimension™ Dies.

RCBS Style Expander Spindle Assemblies

Make your RCBS size die easier and more convenient to use with this Carbide Expander Spindle Assembly designed to fit RCBS Dies. The carbide expander ball provides chatter-free neck expansion, while reducing stretching and leaves inside of neck extra smooth. Choose item number from the chart at right. **\$31.72 each**

New Dimension™ File-Type Trim Die

If you're only trimming one caliber of cases, this is the most economical way to do it. Screw the die into your press, tighten the Sure-Loc® ring, raise a case into the die and use a file to trim away the protruding portion. **\$29.95 each**

HARDENED STEEL CONSTRUCTION:
Die cannot be damaged by filing cases to length.

STANDARD THREADS:
Fits most presses, and also works with Hornady's Lock-N-Load™ Quick Change Die system.

New Dimension™ Neck Size Die

Neck sizing with these dies can eliminate problems of excessive head space, and align the bullet perfectly with the bore, resulting in better accuracy and longer case life. Should only be used for bolt-action rifle cases.

Auto-loading, lever and pump action rifles usually require full-length resizing. Accepts all Mag and Short Mag Calibers. **\$23.18 each**

With New & Improved Zip Spindle

HARDENED STEEL ELLIPTICAL EXPANDER:
Uniform expansion and smooth release from case neck.

RELOADING

Seating Dies

New Dimension™ Seating Dies

Our seating system holds the bullet, the case neck and the seating stem in perfect alignment in the sleeve BEFORE the bullet enters the neck of the case. Ensures the straightest bullet seating over fixed or solid die seaters.

In-Line Bullet Seating System

Includes a floating bullet alignment sleeve, a floating steel seating stem and a built-in crimpers for benchrest precision when seating bullets. Bullets are aligned in the sleeve as they enter the die for optimum seating and enhanced accuracy. Finger adjust and lock!

Taper Crimp Die

New Dimension™ Taper Crimp

This die removes the flare from the case mouth and crimps case mouth around the bullet while maintaining a sharp edge for proper head-space. Improves feeding of reloaded cases in semi-automatic handguns.

Cartridge	Item No.	Cost
9mm Luger/9x21 RN/HP 38 Super Auto	044170	\$18.51
10mm Auto – 40 S&W	044171	\$18.51
400 Corbon	044173	\$20.19
45 ACP/WM 45 AR	044172	\$18.51
454 Casull/45LC	044588	\$20.19
475 Linebaugh	044174	\$20.19

Expander Dies

New Dimension™ Expander Dies

These dies put a consistent slight "bell" or flare on straight-walled rifle or pistol case mouths. Prepares the case so powder and bullet insertion is smoother.

NEW ZIP SPINDLE!

All Hornady dies are warranted against defects in material and workmanship for the life of the product.

Straight Wall Sizer

Titanium Nitride Sizing Die

Features Titanium Coated Sizing Ring. Eliminates case sticking, with no lube necessary. The super-hard, smooth coating is used in high-pressure, high-wear tools to reduce abrasion, so it's perfect for resizing relatively soft pistol brass, and won't scratch your cases. Less friction also means less wear on cases, for longer case life. Spindle locks in place with collet lock for precision decap and easy adjustment.

Accessories

Sure-Loc® Lock Rings

Lets you make precise adjustments of all standard 7/8"-14 dies and accessories.

Lock Ring: Clamps around the whole die. Can't damage the threads. Applies constant pressure across the threads to hold the ring in place. Most other die rings lock by jamming a set screw directly into the threads.

Wrench Flats: Remove and replace dies without pliers ruining the lock ring.

No. 044000 \$3.41

Stuck Case Remover

Consists of #7 drill and 1/4"-20 tap. Remover body fits universal shell holder ram or any standard reloading press. No wrenches required. No chance of damaging size die. Fits most presses with universal shell holder ram and all calibers.

No. 050033 \$14.71

Hornady Die Wrench

Fits the flats of the New Dimension™ dies spindle assembly, lock rings and die body.

No. 396490 \$7.17

Blank Dies

Cowboy Action shooters have a need for dies to load blanks and Hornady's engineers have delivered. They devised a set of dies that allow the loading of blanks for all popular Cowboy Action cartridges, from the 32-20 through the 45-70. These dies are compatible with all 7/8" x 14 TPI presses.

No. 544590 \$67.36

MicroJust™ Seating Stem

Add the MicroJust™ to any New Dimension™ seating die, and you can precisely set bullet seating depth in .001" increments. It's an economical way to achieve accurate bullet seating depth for benchrest accuracy and consistency without the extra cost of another die. Hornady Die Sets already include inline seater. Simply replace the standard seating adjustment stem with the MicroJust™ seating stem.

No. 044090 \$24.64

Handgun Dies

1-800-338-3220

Custom-Grade™ New Dimension™ Pistol Dies

**NEW & IMPROVED
ZIP SPINDLE!**

**NO RISK
LIFETIME
WARRANTY**

All Hornady dies are warranted against defects in material and workmanship for the life of the product.

Hornady Custom-Grade™ New Dimension Dies™ are the most advanced reloading dies available. They're created from select steel, heat-treated for hardening and strength, and hand-polished for a lifetime of reloading.

FEATURES

1) NEW ZIP SPINDLE™ DESIGN

Provides precise fit by aligning the expander spindle to perfectly center itself in the die. The new design features a series of light threads cut on the spindle and spindle collet which eliminates slippage and takes the knuckle-busting out of tightening the spindle lock.

2) SURE-LOC® LOCK RINGS

Sure-Loc® rings clamp the whole ring squarely on the threads. They don't use a set screw that digs in from one side only. Locks tight; wrench flats make them easy to remove from press without losing settings. Sure-Loc® rings fit all 7/8"-14 dies.

3) WRENCH FLATS ON SURE-LOC® LOCK RINGS AND SPINDLE LOCKS

Make fine adjustments easy, and eliminate damage to rings that pliers can cause. Locking screw on Sure-Loc rings is side-set so the screw never contacts the threads, which can cause damage.

4) TITANIUM NITRIDE COATING ON RESIZING RING

The Titanium Nitride coating on our pistol case resizing ring is an extremely hard, smooth coating that's used on high-pressure, high-wear tools. It's perfect for the relatively easy job of resizing pistol brass.

5) ALL STEEL SEATER ADJUSTMENT SCREW

Provides added strength and reduces thread wear. Easily adjusts for bullet seating depth. No wrench needed.

6) COMPRESSION WASHER

Provides slight amount of tension to make fine adjustments easier, and holds setting once in place.

7) SLIDING ALIGNMENT SLEEVE

Holds the bullet, case neck and seating stem in alignment within the sliding sleeve BEFORE the bullet enters the neck of the case. Ensures the straightest bullet seating over fixed or solid die seaters.

8) SEATING STEM

Holds bullet in perfect alignment as it's being raised into seating position. This translates into enhanced accuracy.

9) RETAINER RING

Removes easily for fast disassembly and cleaning of the die.

10) BUILT-IN CRIMPER

Gives you the option of crimping without the need for an extra crimp die.

Series IV Specialty Handgun Dies

Our specialty die shop creates New Dimension™ dies for loading discontinued cartridges, wildcat cartridges or any other hard-to-find ammunition. For fast service, we have many calibers of dies in stock, and our die shop can make dies for any cartridge, size or specifications you don't see listed. Our new manufacturing process has greatly reduced turn-around time on orders. Please call Hornady Customer Service for more information on availability and prices. **\$67.36 each ▼**

How to select bushings for half-grain charges:

Hornady powder bushings are identified by numbers that correspond to the size of their inside diameter. (For instance, the inside diameter of the #456 bushing is .456 inches.) Bushings for powder charges in half-grain increments can be calculated from this chart. Simply "split the difference" between the two even-grain bushings, and select the bushing nearest the result.

Example: To find the bushing for 18½ grains of Hercules Red Dot powder, note that bushing #468 gives a charge of 18 grains and that bushing #480 gives 19 grains. Split the difference between 468 and 480, and the result is 474. Thus, the correct bushing for 18½ grains of Red Dot is bushing #474.

\$4.57 each

IMPORTANT: Due to agitation of powder during the loading operation, different models of loaders require different bushings. Therefore, the above chart should be used only for 366 Auto™ and Hornady's APEX™. Additional charts are published for other Hornady loaders.

All charges listed on this chart are an average of several loads that were weighed following the complete reloading cycle. Powders used in establishing these loads were from samples supplied by the manufacturer. Charges may vary slightly due to operator's technique and/or powder variables.

366 Auto™

\$575⁰⁵

12 GA No. 010041
20 GA No. 010044
28 GA No. 010046

Now with
GAS ASSIST OPTION!

366 AP™ (Auto Progressive)

Hornady's 366 Auto™ Shotgun Reloading Press is the ideal press for the avid target shooter. The time-tested design lets you load high-quality, low-cost ammo in a hurry – just set the case and wad in place, and pull the handle. The 366 Auto™ does the rest, automatically.

F E A T U R E S

1) PRIMER TUBE FILLER

Every 366 Auto™ includes our Primer Tube Filler. Holds a full box of shotshell primers, and fills the tube with a turn of the dial. Won't drop primers upside-down into the tube.

2) EASY EMPTY POWDER AND SHOT HOPPER TUBES

If you need to empty your powder or shot, this entire assembly can be easily removed without spilling – a feature unique to the 366 Auto™. Baffles let powder and shot flow more smoothly for more uniform loads from start to finish.

3) AUTOMATIC PRIMER FEED SYSTEM

Makes priming shells automatic with the pull of the handle. Extremely smooth and reliable design reduces to nearly zero the chances of crushing the primer. Primer Tube Filler ensures no upside-down primers enter the feeder tube.

4) GAS ASSIST OPTION

The 366 Gas Assist option will make you feel like you have a new reloader! It provides automatic, smooth, and reliable indexing for consistent primer feeding and NO spilled shot. Best of all, it works with nearly any of the 366 loaders – past and present! **No. 010049 \$123.28**

5) THREE-STAGE TAPER-LOC CRIMPING

Starts crimp, closes and tapers. Perform more reliable crimping with both six or eight point crimps. Give factory taper to your shells.

6) PRIMER FEEDER SHUTOFF (Optional)

See the next page for more information.

7) SPRING LOADED SEATER PUNCH (Optional)

See the next page for more information.

8) STANDARD SHOT AND POWDER BUSHINGS

These easy-to-change standard bushings make it easy to switch to a different shot or powder for most popular target loads.

366 Auto Progressive \$575.05

12 ga. No. 010041
20 ga. No. 010044
28 ga. No. 010046

366 Auto Progressive \$707.76

410 ga. No. 010047

9) POWDER SHUT-OFF, AND SHOT SHUT-OFF

The shut-offs for powder and shot let you operate the machine as you need to by shutting off individual stations.

10) SWING-OUT WAD GUIDE

The wad guide swings out to give you better access, making it easier to place the wad. Helps to speed up your reloading.

11) AUTOMATIC INDEXING

Each pull of the lever automatically rotates the shell plate, so you don't have to do it manually. You'll be amazed at how much faster and smoother your reloading efforts go with auto indexing.

12) FULL-LENGTH RESIZING STATION

You can resize your shells to factory dimensions, or skip this station entirely and speed up your reloading. Many presses force you to resize. The 366 Auto™ gives you the choice.

13) PRIMER CATCHER

Every pull of the handle ejects the spent primer from fired shells into the primer catcher for neat, easy disposal.

14) AUTOMATIC SHELL EJECTION

Completed shells are automatically ejected behind the press, so you don't have to remove them manually. Another speed advantage over other presses.

15) SHOT DRAIN HOLES IN SHELL PLATE

If you reload, you will eventually spill shot. Spilled shot rolls to the edge of the shell plate and through the holes, so it won't jam.

16) ALL DIE-CAST CONSTRUCTION

Solid die-cast frame is long lasting, and provides a stable, rigid platform for precision reloading.

DUST COVER No. 100066 \$19.95

366 Auto Progressive with Gas Assist option \$634.61

12 ga. No. 010050
20 ga. No. 010052
28 ga. No. 010058

366 Auto Progressive with Gas Assist option \$772.46

Interchangeable Charge Bushings

For use with all Hornady shotshell reloaders. Designed so shot and powder bushings cannot be accidentally reversed in the charge bar. The bushings make it easy to change from one load to another. Machined from solid bar and reamed to +/- .001". **\$4.57 each**

Lead Shot Charge Bushings for Field Loads

For use with all Hornady shotshell reloaders. Compensates for the tighter packing of small shot sizes.

Hornady Buckshot

Made with the same dedication to uniformity as Hornady bullets, Hornady Buckshot is cold swaged using a lead alloy hardened with antimony to prevent deformities after firing. This helps it fly straighter and hit harder. We use a strict roundness tolerance of +.001" to put more pellets in your targets. The industry standard is a +.006" tolerance.

Buckshot is sold in 5 lb. boxes. **\$14.60**

Hornady.com is our online home for the latest news, products, services and all things Hornady.

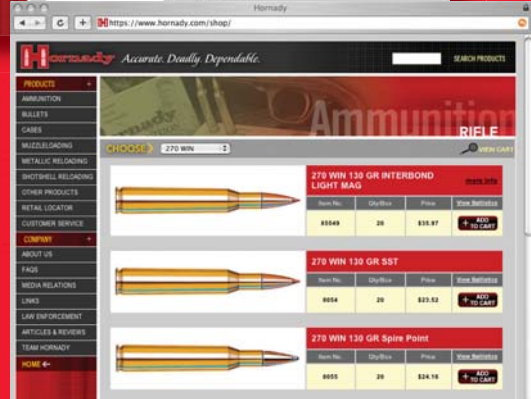

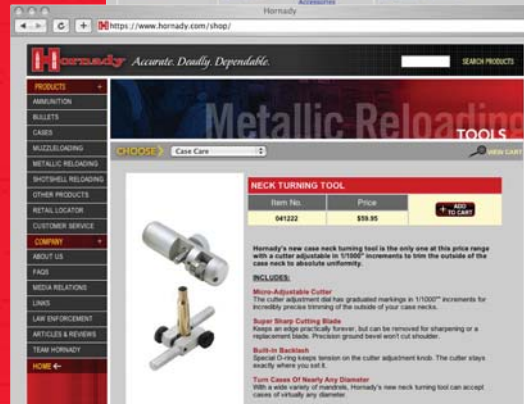

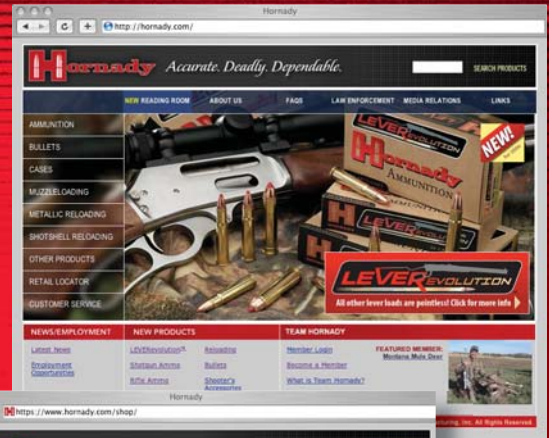

Our website is packed with useful information about our products, technical data, shooting sports news, and much more!

Reloading Seminars and other Events

Our website is also a great place to find out about the shows, events and conventions where Hornady will be an exhibitor, or to learn about great Hornady-sponsored events like our Reloading Seminars. In fact, if you've always wanted to join the millions of shooters who enjoy the fun and challenge of loading your own ammo, this is the perfect way to get started. Visit Hornady.com, and watch for a Reloading Seminar in your area!

There's one other great reason to visit Hornady.com — it's the only place in the world to register yourself as a member of Team Hornady! If you register for a FREE Team Hornady membership, you'll be among the first to learn about revolutionary new products like this year's LEVERevolution cartridges, receive special offers and insider information and join a growing community of hunters who enjoy exchanging their stories of success using Hornady ammo and bullets.

You'll find it all at Hornady.com
