Why this magazine?

In just the past few years, Mossberg has witnessed a colossal transformation, evolving from largely a pump-action shotgun manufacturer to one that now offers bolt-action centerfire and rimfire rifles, semi-auto rimfire rifles, and semi-auto and over/under shotguns. The truth is, with such an all-encompassing line to showcase, we've simply outgrown the ability to properly feature our products in a traditional catalog format. The solution is what you now hold in your hands—the 2007 Mossberg Gun Annual—a publication loaded with hunting and shooting information, and one that has nearly tripled in size from just a year ago...a testament to how this company is growing and diversifying faster than any other in our industry.

Between these covers, you'll find a massive Buyer's Guide section illustrating and listing the specifications for every rifle and shotgun we offer—as any good product catalog should. But the heart of this magazine is a host of interesting and informative articles written by some of the very best outdoor writers in the business; articles which give you, our customer, a real-world perspective of our 88-year commitment to provide you more gun for the money.

In a word, it's about *value*.

But value isn't the whole story. As America's oldest family-owned and operated firearms manufacturer, our company has over 100 patents to its credit, pioneering many of the innovations today's hunters and shooters take for granted—like the rifled-barrel slug gun; the 3½ inch 12-gauge magnum shotgun; the barrel-mounted cantilever scope mount, just to name a few.

These are the very things that have made our products synonymous with the 'American way,' products and features that you've grown up with, and have come to depend on—as do our troops in the Middle East, law enforcement agencies around the world, and millions of hunters and shooters everywhere.

May you enjoy many safe and successful seasons.

A. Iver Mossberg

THIS IS NOT YOUR FATHER'S MOSSBERG

BY GREG RODRIGUEZ

4x4
BOLT ACTION

THE HERD OF PRONGHORNS

was nothing more than a haphazard collection of white specs on the horizon when I left the truck on that frosty, Wyoming morning. I wouldn't normally chance such a long stalk with so many eyes watching, but the odd buck with the forward raking horns we christened "Funny Boy" caught my fancy earlier in the hunt.

I've killed bigger pronghorns, but I love unusual racks, and Funny Boy's certainly fit the bill. Fortunately, a convenient coulee offered enough cover to help us stay out of sight while working my way into range.

When at last we made it to the end of the coulee and I peeked over the edge, I was rewarded with the sight of the herd feeding placidly, oblivious to our presence. Unfortunately, I still had to crawl 50 yards to gain enough elevation to clear the scraggly sage that grew so thick around the drainage.

I crawled slowly, inch-by-inch, pushing my pack and rifle in front of me in hopes of gaining the few inches of precious elevation I needed to make a clean shot. With hundreds of eyes to fool, it took nearly an hour to cover those 50 yards, but when I finally rested my gun on my pack and pulled out my range finder, Funny Boy was still there.

The shot was only 255 yards, but as often happens when hunting herd animals, I had to wait an eternity for a safe shot. When the buck finally stepped clear of the surrounding does, I plastered the reticle squarely on its shoulder and touched the trigger. At the shot, Funny Boy – the first animal to fall to Mossberg's new 4x4 rifle — flopped over on its back, deadlier than dollar gas.

Above: Finding the right buck and getting within range can be tough with nimble footed pronghorn. Below: The author and "Funny Boy", the unusual buck taken with the new 4x4 rifle.

FUTURISTIC STYLING

was the first thing I noticed about this newest Mossberg. The stock was nicely figured, but the gun's overall appearance was more noticeable for its stylish lines and vented forend. Other noticeable stock features include a scalloped butt stock and unique cheek piece, which can best be described as Mossberg's 21st century interpretation of a Monte Carlo. The synthetic-stocked version adds a skeletonized butt stock, offering an even 'cooler' look. The 4x4's action is similar to that of Mossberg's 100 ATR, but the bolt face has been opened to accommodate three new magnum offerings (7mm Rem. Mag., .300 Win. Mag., and .338 Win. Mag.). The primary difference is a flush-fit, detachable polymer magazine (photo at right) that holds four rounds in standard calibers and three for belted magnums. With box magazines typically being associated with 'expensive', this is a nice touch.

Like the ATR, the 4x4 features a free-floated, button-rifled barrel with a recessed crown, but with these new magnum chamberings, it's 24" long, with rifle sight models coming in at 22". And, to help take the guesswork out of mounting a scope, factory-installed Weaver-style scope bases are standard with all non-rifle sight models.

Having a stable rest is critical, with shots averaging 300+ yards. The author made use of his pack to take a single, well-placed shot at 255 yards.

NOT ONE TO SIT AROUND,

I wanted to do more with the test rifle, so after getting our pronghorns to the skinning shed, I spent a few hours with it on the outfitter's shooting range. I started out by shooting steel targets at 250 yards from a variety of positions. The first thing that stood out was how good the stock felt. Mossberg's marketing and engineering folks clearly put a great deal of thought into the design, as it does a great job of attenuating recoil, and was comfortable to shoot from the bench and from field positions. And even though it was a prototype, the detachable box magazine fed perfectly, regardless of how fast (or slow) I worked the bolt.

Once I got a feel for the gun, I headed to the bench. First, I fired three groups with the last nine rounds from the box of 180 grain Winchester Power Points I hunted with. My groups averaged just over an inch—impressive, but I had a feeling that it could do even better.

Next, I tried Federal's 150 grain Trophy Bonded Bear Claw load. Given that we were in the middle of nowhere, I did not have a wide assortment of ammunition to test, and would probably not have chosen that particular load for accuracy testing if I did, but it produced several one-inch groups—not bad for a bullet that was designed for penetration rather than accuracy.

I didn't choose that Trophy Bonded Bear Claw load by accident. While we were pronghorn hunting and bantering about the knock-down power of the .300 Win., Keith, our outfitter, mentioned that he knew of a bison herd on a nearby ranch that he thought we might give a try if I was interested. I have always wanted to hunt bison, and the fact that they were on a 38,000 acre ranch

Above: The perfect combination of form and function, the new Mossberg 4x4 is both stylish and packed with valuable features found on rifles costing much more.

Left: The author took this fine bull in the shadow of the Devil's Tower with the new Mossberg 4x4 rifle. Below: Thankfully, a small group of pines kept the enormous bison from rolling all the way down the cliff's edge.

less than an hour away was all that I needed to hear. If things went right, I reasoned, I was going to need the bone-crushing penetration only a bonded bullet like the Trophy Bonded can deliver.

TATONKA TESTED

The next morning we searched high and low for one of several bison herds that roam the large, working cattle ranch. We had no luck, so we started searching water holes and stock tanks for fresh tracks. On the fourth stop we found what we were looking for, and the hunt was on.

We didn't walk far before we caught up to the herd. Now it was just a matter of finding a really good bull, which didn't take long. When I wiggled to within 60 yards, I leaned against a tree and waited for the bull to step clear of the herd. A young cow

halted my trigger squeeze several times, but when the bull finally offered a shot, I drove a 150 grain slug through its shoulder.

The bull buckled, but knowing how tough bison are, I wasted no time before sending a second bullet into its boiler room. Before I could fire a third, the bull disappeared into the herd.

We waited a few minutes before following the monster bull, but we were pretty sure it was down for good. It was down all right...way down. Evidently, the smell of blood excited the other

bulls, which ganged up on my bison, goring it savagely until they knocked it to the bottom of the hill.

Fortunately, a giant pine stopped its fall just short of disappearing off the cliff's edge. Getting the beast off of the mountain side was a feat within itself, but we were all smiles a few hours later, savoring the moment and taking in some of nature's finest creations.

A GREAT GUN AT ANY PRICE. Although my initial test was short, I was impressed with Mossberg's new 4x4 rifle. It was accurate, reliable, and damn good-looking. I can't help but think the production version will only be better. And with a street price in the \$300+ range, we're talking one helluva value. In fact, this Mossberg 4x4 is a helluva gun at any price! ■

Mossberg 4x4 Centerfire Rifle Specs at a Glance

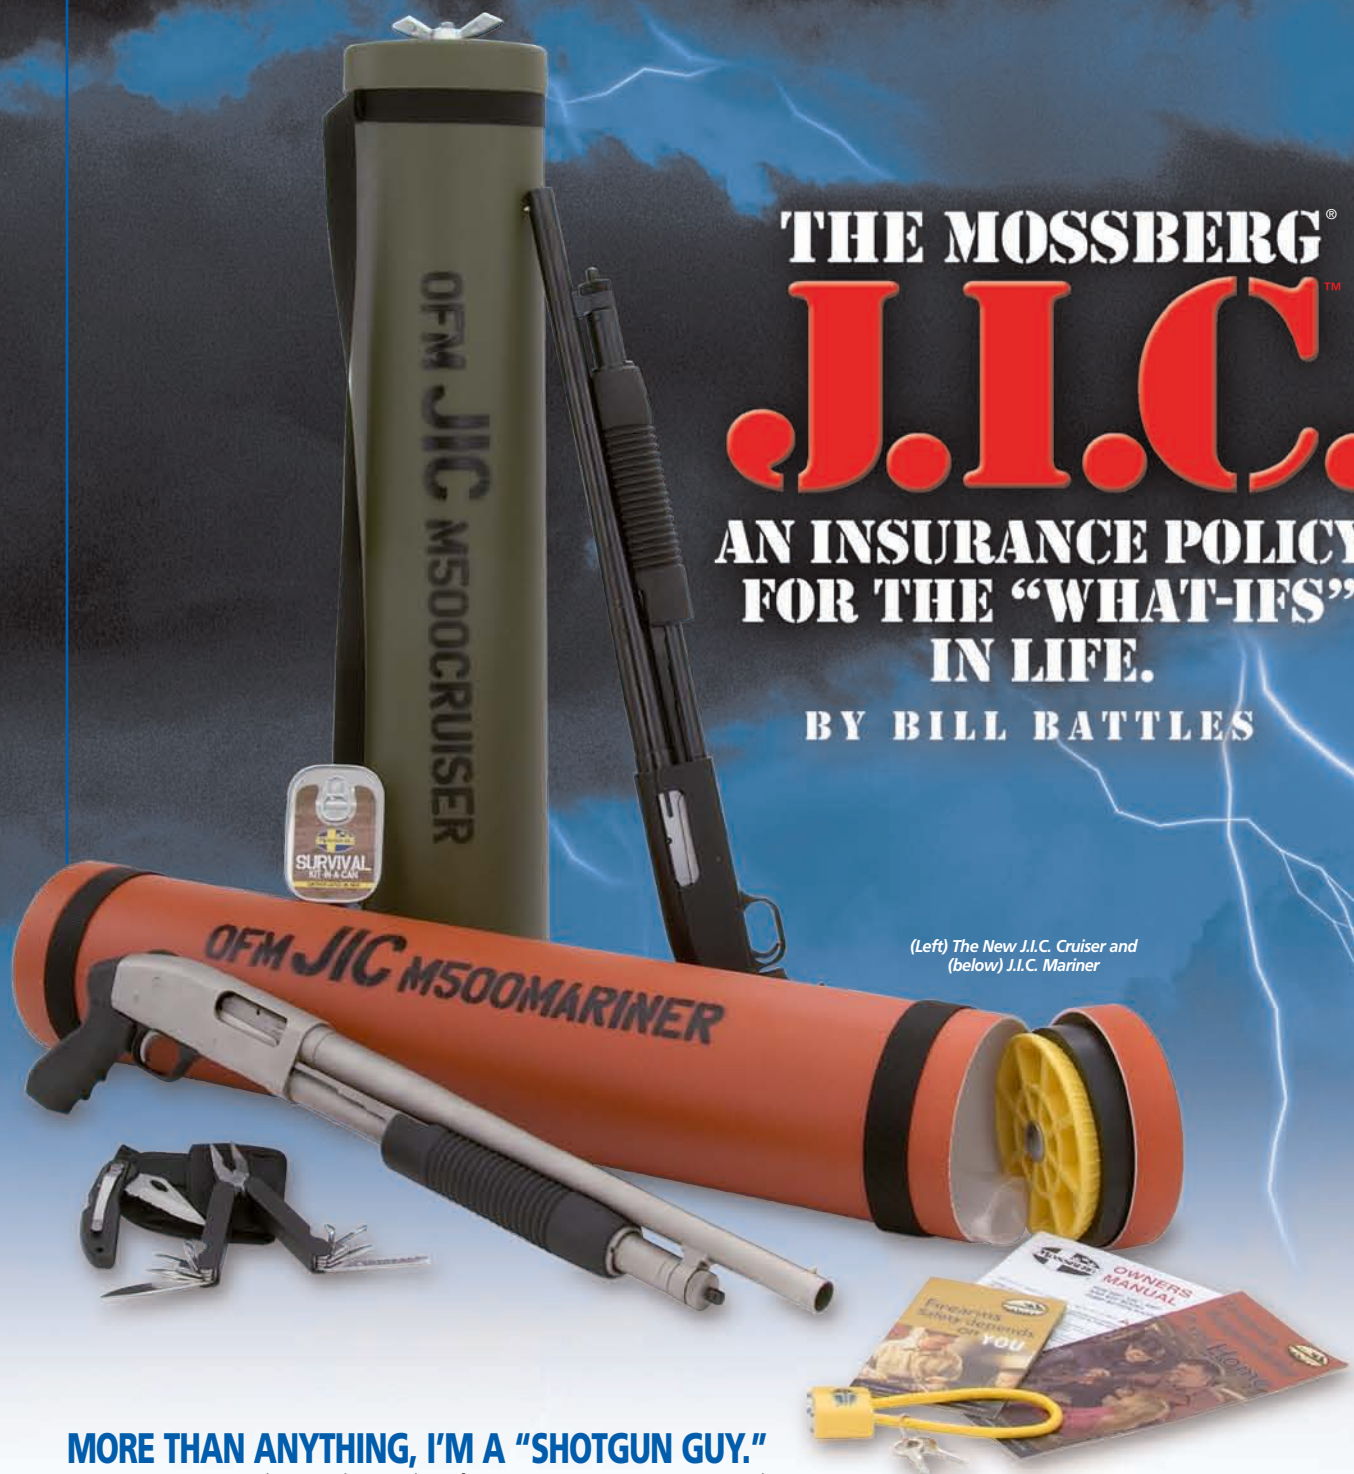

Type	Bolt- action Centerfire rifle
Caliber	.25-06 Rem, .270 Win., .30-06 Sprg., 7mm Rem Mag, .300 Win Mag, .338 Win Mag.
Barrel	24" in mag and non-mag calibers, 22" rifle sight models only
Mag. Capacity	Detachable box magazine. 3 rounds in magnum calibers; 4 rounds in standard calibers
Safety	Two position
Stock	American black walnut; Deluxe Laminated; Skeletonized Black Synthetic
Metal Finish	Matte blue; Marinecote

THE MOSSBERG® J.I.C.™

**AN INSURANCE POLICY
FOR THE “WHAT-IFS”
IN LIFE.**

BY BILL BATTLES

*(Left) The New J.I.C. Cruiser and
(below) J.I.C. Mariner*

MORE THAN ANYTHING, I'M A “SHOTGUN GUY.”

I get to test and write about a lot of interesting guns ...some good, some bad, some ugly. But even as I write this I'm still trying to figure out which one — or more — of those categories the new Mossberg® 500® J.I.C.™ (“Just In Case”) falls into. But before wrestling with that — and the other obvious question: “Just in case of what?” — let's see what kind of gun we're talking about here.

Reduced to its simplest terms, the J.I.C. is a Mossberg 500 12-gauge shotgun housed in a floating, waterproof-to-a-depth-of-40-feet, impact-resistant synthetic tube with shoulder strap. Three versions are available: a blued 500 Cruiser® model in an OD Green tube; a 500 Mariner® model, with Mossberg's proprietary matte-silver Marinecote™ finish, packed in an International Orange tube; and a camo Cruiser model — dubbed the '500 J.I.C. Sandstorm' — in a camo clad tube. All three shotguns sport 18.5-inch cylinder-bore barrels with brass bead front sights, 3-inch chambers, synthetic pistol grips and forends, sling swivel studs — the front swivel being mounted on the mag tube cap, and rear one affixed to the top left side of the pistol grip — gun locks, and owners' manuals. Ammo capacity is five 2.75-inch shells in the magazine, plus one in the chamber (4+1 with 3-inch shells), and each model is drilled and tapped for optics mounts.

The Cruiser kit comes with a "Survival Kit-In-A-Can" containing 89 survival items, from fish hooks, to water purification tablets, to bandaids and chewing gum. The Mariner kit passes on the Survival Kit-In-A-Can, but includes a stainless steel multi-tool and lock-back folding knife with serrated blade, both packed in a Cordura carrying case. The waterproof tubes provide a lot of extra space for other essential survival stuff, like space blankets, spare clothes, spare ammo, knives, saws, MRE's or bottled water, and the carry strap can be quickly removed and converted to a sling for the shotgun.

So, back to the question of good, bad, or ugly. Being based on a Mossberg 500 shotgun, the J.I.C. certainly qualifies as "good." After all, the venerable 500 is one of the most popular and reliable pump guns in the history of firearms design. I can't tell you for certain that there are more Mossberg 500's sold in this country each year than any other pump shotgun, but if it's not true I'd be surprised.

As for "bad," the pistol-grip-equipped 500 J.I.C. is that too, but bad in the sense of "bad ass." Weighing-in at only 5 lbs. 8 oz.,

Ugly? Well, compared to a Holland & Holland side-by-side or a high-grade Perazzi over-and-under, the J.I.C. is a distinctly ugly weapon. But beauty, as they say, is in the eye of the beholder, and when stuff hits the fan, a locked-and-loaded J.I.C. can be a beautiful thing to behold (or should I say "be holding"!).

Which brings us to the question: "Just in case of what?" Well, c'mon, it doesn't take a rocket scientist to understand that the J.I.C. is not intended for the more civilized shotgun pursuits, like driven grouse hunting in a tweed sport coat and tie, or clay target shooting. This gun is designed for one thing and one thing only: stopping an attacker — whether man or beast — dead in his tracks.

In the beast department, three or four guides I fish with in Alaska carry short-barreled, pistol-grip equipped 500s loaded with 3-inch 00 Buck across their backs for defense against brown bear attacks. They swear that nothing on this earth is more effective at stopping a charging bear than a load of 00 Buck between the eyes.

A more common self-defense scenario

like the J.I.C., stoked with six rounds of 2.75-inch 00 Buck.

And then there's this War on Terror we've been confronted with, which has the potential for getting personal real quick. As an example, one of our staffers and his family were on vacation in England this past August, due to fly home out of Heathrow on the 16th. As it turns out, they didn't make their flight, because it was one of the dozen or so U.S. flag airliners scheduled to be blown up over the Atlantic that day. Outstanding intelligence work saved the day on August 16, but this war is going to last a very long time, and if "Jihad" arrives at your door, you'd be hard pressed to come up with a better tool than the J.I.C.

Or, throw it in the pickup for security on your next camping trip, or in the boat for your next backcountry fishing trip. And be sure to have it with you — along with a box of No. 6's — the next time you plan to get lost in the woods, to feed yourself until help arrives.

Since there's no shortage of "what ifs" in life, you'd be well advised to check out a Mossberg J.I.C. ■

Life is already filled with too many uncertainties; protecting yourself, your home, your family — shouldn't be one of them.

it can be handled deftly by those big and small, and is comfortable to shoot from the hip or closer to eye level like a big handgun — a very big handgun (28.75" in overall length). During testing we were pleasantly surprised at how controllable the gun was, and the patterns, let's just say that nothing would have survived.

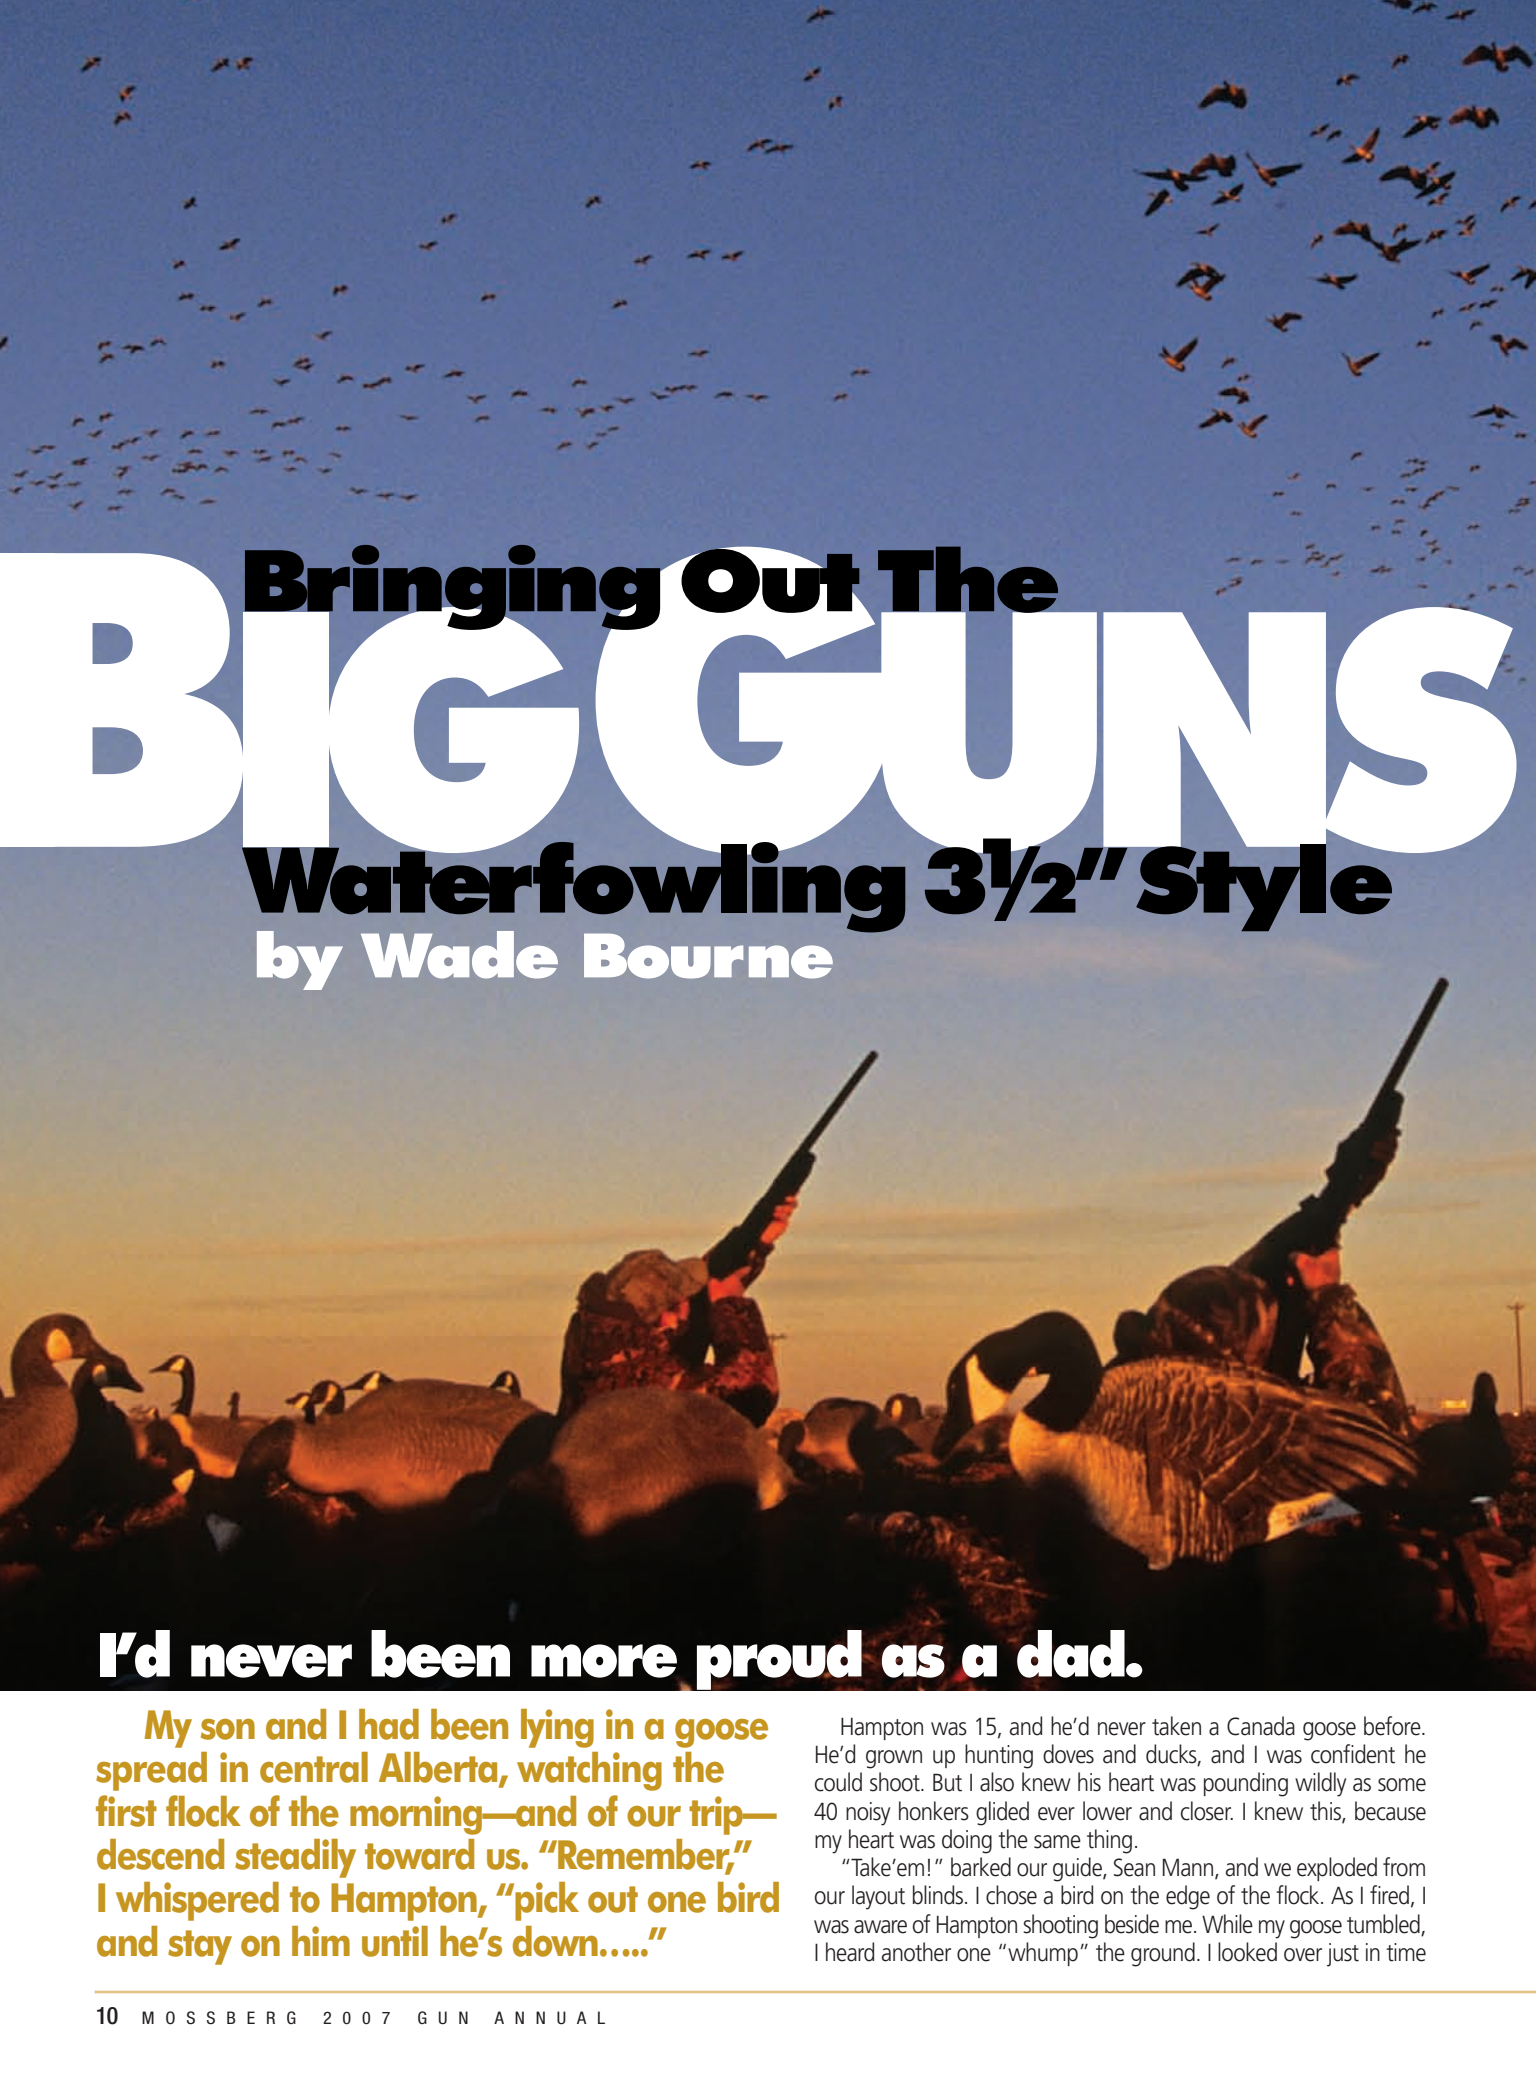

for most readers, however, is home defense. Bad guys have one thing in common with big bears — they have a very low tolerance for 00 Buck. I've never had to confront an armed assailant in my home at night, thank God, but should that ever happen my weapon of choice would be a pistol-gripped, 12-gauge shotgun just

It counts to "be prepared"...

The Cruiser kit comes with a "Survival Kit-In-A-Can" (left) containing 89 survival items, from fish hooks, to water purification tablets, to bandaids and chewing gum. The Mariner kit includes a stainless steel multi-tool and lock-back folding knife (above) with serrated blade, packed in a Cordura carrying case. The waterproof tubes provide ample extra space for inclusion of your own essential survival items.

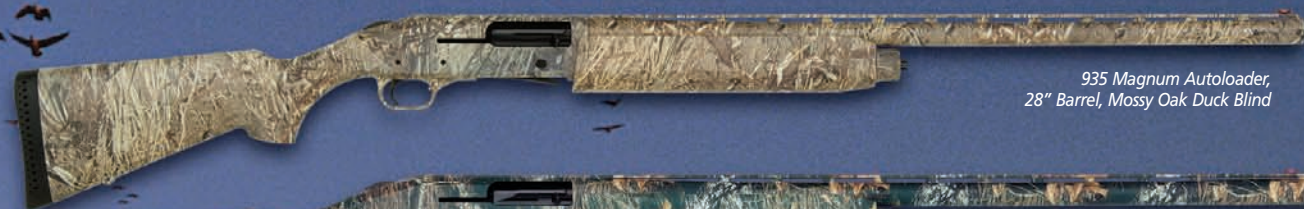

Bringing Out The **BIG GUNS** Waterfowling 3½" Style by Wade Bourne

I'd never been more proud as a dad.

My son and I had been lying in a goose spread in central Alberta, watching the first flock of the morning—and of our trip—descend steadily toward us. "Remember," I whispered to Hampton, "pick out one bird and stay on him until he's down...."

Hampton was 15, and he'd never taken a Canada goose before. He'd grown up hunting doves and ducks, and I was confident he could shoot. But I also knew his heart was pounding wildly as some 40 noisy honkers glided ever lower and closer. I knew this, because my heart was doing the same thing.

"Take'em!" barked our guide, Sean Mann, and we exploded from our layout blinds. I chose a bird on the edge of the flock. As I fired, I was aware of Hampton shooting beside me. While my goose tumbled, I heard another one "whump" the ground. I looked over just in time

835 Ulti-Mag Flyway Series
28" Barrel, Mossy Oak New Break-Up

535 ATS
28" Barrel, Black Synthetic

Mossberg offers three specialized 3 1/2" models in a variety of configurations for the waterfowler—the 935 Magnum™ Autoloader, and two pump-actions—the 835® Ulti-Mag®, and the 535 ATS™.

to see him swing on a second Canada and fold it cleanly: two shots, two kills on his first-ever volley at geese.

"Congratulations," I said. It was the perfect start to a trip that would prove to be a memorable experience for us both.

I had prepared Hampton well for this adventure. We watched goose-hunting videos together so he'd know how field-hunts were conducted. We borrowed a layout blind and practiced covering up, rising, and shooting from a prone position, and we drilled on gun safety.

And I'd also taken one more step; one which perhaps made the biggest contribution to his success: I'd outfitted him with a Mossberg® 935 Magnum™ autoloading shotgun chambered for the 3 1/2 inch magnum shotshell.

Hampton was big for 15, and I was pretty sure he could handle the gun. Besides, I didn't want to take him on a man's hunt with a boy's shotgun. After that first flock of geese ended with Hampton's double, I knew I'd made a wise decision to provide him the same gun and load I was shooting.

A Custom Fit at a Value Price.

(Bottom) Mossberg's 935 Magnum features a Stock Drop Spacer System—bringing a custom-type fit to every shooter (Top: The Spacer System is optional on 835 and 535 pump-actions). Commonly found on guns costing much more, these specially designed spacers allow quick adjustment of the vertical angle of the stock for precise eyerib alignment. The result? Improved down-range results in those tough "big gun" hunting situations.

835® Ulti-Mag®: Filling the Need, Clearing the Skies

Indeed, firepower is what 3½" gunning is all about, especially in waterfowling where more "oomph" is called for. Geese are big, tough birds, and are sometimes a bear to bring down, especially at longer ranges that are often the norm. Being able to put more and/or bigger pellets on target translates into cleaner kills and greater hunter success.

This is why Mossberg teamed up with the Federal Cartridge Company back in the late 1980s to develop the 3½" shotgun. The idea was to provide a 10-gauge payload in a 12-gauge package to allow for denser shot patterns at maximum distances. The result was Mossberg's 835® Ulti-Mag® pump, which hit the market in 1988. Federal simultaneously brought out a range of 3½" loads for both waterfowl and turkey hunters. This new shotgun/load combo immediately became popular with hunters who desired the greater knockdown power they provided.

Tim Blazek, senior design engineer for Mossberg, explains that the 835 was designed specifically for the new 3½" loads—not adapted from a previously-existing 2¾ or 3" model like many other modified brands out on the market today. "The 835 was new from the ground up," Blazek says. "The receiver was lengthened and bulked-up to handle the added pounding and pressures of the 3½" loads, and the barrel was overbored to optimize pattern performance as well as to provide recoil reduction. Everything that went into this shotgun was intended specifically to accommodate the bigger, heavier payload for which the 835 was designed."

935 Magnum™: The Innovation Continues

Following the success of the 835 Ulti-Mag came the 935 autoloader in 2004, a gas-operated semi-auto designed specifically to shoot 3" and 3½" magnum shells. Obviously, this gun was not designed with dove shooters in mind, but rather...and with no apologies, hard-core turkey and waterfowl hunters.

Like the 835 pump, to attenuate the added recoil of the big 3" and 3½" magnum loads and to improve patterning, all smoothbore barrels for the 935 are overbored. Another feature found on the 935 is a self-regulating compensated gas system. In layman's terms, this system allows for gas pressure to buildup to the optimum operating level, then vent off any excess gas to minimize recoil. This also reduces stress on the

action's components, adding greatly to its durability. To enhance reliability, there are no rubber O-rings to tear, melt or wear out.

Yet another reason the 935 has become the auto-loading shotgun of choice for so many veteran waterfowlers is its ease of maintenance. In 10 minutes I can take the barrel off, disassemble the gas system, give it a thorough cleaning, and put the gun back together. It's a real plus for those hunting days when I'm tired or hurried and don't have time to spend cleaning my gun.

Two more features I especially like on the 935 are the ambidextrous thumb safety located atop the receiver, and the fiber optic front sight that kind of grabs your eye and points the way to the target; it's easy to see even in the dim light of dawn. And as a dedicated duck and goose hunter, I find the 935's synthetic stocks to be eminently suited to the rigors of waterfowling, particularly when finished in Mossy Oak's new Duck Blind or the Advantage Max-4 camo pattern.

Built for Extreme Conditions

Indeed, rigors might best describe the conditions that waterfowlers encounter. In Alberta, we were hunting in harvested grain fields that were mucky from recent rains. Black gumbo collected on our boots as we set out the decoys, then sloughed off inside our layout blinds once we crawled in and laid down. By mid-morning our clothes and guns were coated with that same, sticky mud, but our Mossbergs performed without a hitch.

We waterfowlers also encounter other extreme conditions. A prolonged freeze, for example, often pushes geese and ducks onto big lakes and rivers. For gunning in these conditions, hunters need long range firepower, and shotguns that will stand up to frigid temperatures and icy spray. Another "extreme" situation to which 3½" payloads are uniquely suited is pass-shooting, where geese or ducks are flying over at the maximum limits of effective range. By upgrading from 3 to 3½" loads, hunters can take birds efficiently out to 50 yards or so.

Increasing pellet size is an important concept in understanding the advantage of stepping up to 3½" loads. For instance, BBB and T shot are larger than BBs, and these bigger pellets pack greater penetrating/knockdown power at maximum ranges. By switching from 3 to 3½" loads, hunters can step up one or two shot sizes (i.e., from BBs to Ts) and still have enough pellets for a dense, lethal pattern. Consider: 3½" loads of BBBs and T shot contain approximately 95 and 82 pellets respectively, whereas a 10-gauge load of BBBs and T shot contain approximately 98 and 84 pellets—strikingly similar, yet the 12 gauge 3½" guns are lighter, the ammo is more readily available, and both can often be found for a fraction of the cost as its 10 gauge brethren.

One other plus... and it's a big plus, is their affordability; every Mossberg 3½" model that I've ever seen at a gun shop retails far below competitors' similar-model shotguns, yet sacrifices nothing in performance or features.

After three days of shooting geese in Alberta under some very harsh conditions, my son and I returned convinced of the viability of the 3½" shotguns and magnum loads for waterfowl. There's no such thing as overkill when geese are on final approach. An extra half-inch of pellets and punch made a difference for Hampton and me, and it will for other hunters who go for the big guns. ■

Pattern testing your gun prior to hitting the field is critical to your success. My son Hampton tried a variety of loads and brands until he'd found that magic combination.

Background: When hunting a wide-open area, setting up a layout blind is one of the more effective ways of bringing geese into gunning range and into your game bag.

Destination: Argentina

Globetrotting for Ducks and Doves

BY GREG RODRIGUEZ

Although I have booked hunts in Argentina for over ten years, I had never been there myself. On many occasions my employees and friends tried to talk me into going, but it was only recently that I bit the bullet and booked my own trip south. Everyone who had been there raved about the fantastic food and hospitality, and hunting so good it had to be experienced to be believed. I never really doubted them, but it was difficult for me to imagine the kind of shooting they described.

My first trip to Argentina was everything I hoped it would be. The people were friendly, the food—especially the beef—was incredible, and the wine was worthy of the finest tables. But as good as everything else was, it was the endless swarms of aerobic doves that left the greatest impression on me.

The first day I was overwhelmed by the seemingly endless clouds of birds that flew past my station at the edge of a corn field. The little devils darted and dived, using the wind to make a fool of me. The sheer number of birds had me, literally, spinning in circles, moving my gun from target to target, often without touching the trigger. Eventually, though, I settled down and got the hang of it, at least enough to send some lead down range, but it wasn't pretty. I hit a few, but most of my success was due more to the birds' bad luck than my shooting prowess.

The incredible action and hospitality made leaving Argentina tough. Fortunately, I've returned several times since, most recently with a couple of friends and a crew of crazy rednecks from South Florida.

Our guys were anxious to shoot, so we went directly from the airport to a sorghum field for the afternoon hunt. I was still getting dressed when the Florida boys began firing for effect. Loud cries of "son" (it's a red-neck, southern saying you just have to hear to appreciate) punctuated the continuous boom of 12 gauges every time gregarious Floridian, Donny Patinaud, touched the trigger of his Mossberg® 930™.

Fortunately, as hard as he tried, Donny didn't get them all; thousands of birds flew by our stations that day. In fact, it was more action than some could handle; some of my companions chose to forgo the last hour of shooting in favor of cold cervezas under a shade tree. One was dizzy from looking up so much; the other couldn't hold up his gun any more. Both were having a blast.

My friend Dennis Kendall, on the other hand, wasn't a bit tired, although he did burn his hand on the forend of his new Silver Reserve™ over/under several times. Despite the burned paw, he wore a smile as big as the pile of empty hulls that surrounded him. And with good reason—he was running up an impressive hit rate with his new gun. Across the field, the Florida boys and I were doing our best to break our new Mossberg 930's, but they performed splendidly under what are, without a doubt, the harshest hunting conditions to which any shotgun will ever be subjected.

The high volume of rounds fired each day

on a typical Argentine hunt far exceeds what most guns will face in a lifetime.

When those rounds are fired over a very short period of time, the extreme heat generated magnifies the effect. The heat and the pounding combine to literally destroy a gun. In fact, with few exceptions, I have seen almost every popular brand of shotgun brought to its knees in Argentina. It was because my friends and I did not want to pound our expensive over/unders into oblivion that we decided to bring two value-priced new models from Mossberg—the 930 Autoloader and the Mossberg International™ Silver Reserve over/under.

The 930 is a 12 gauge, self-regulating, gas operated semi-automatic shotgun. Its clean-running gas system softens recoil and enables the 930 to digest everything from 2¾" 1 oz. target loads to heavy, 3" waterfowl loads without a hitch. In my experience, some 3" chambered guns do not feed light 1 oz. loads reliably, particularly the no-name shotshells

that are generally used for gunning doves down in Argentina. And they're not the cleanest-burning shotshells in the world, either, but none of our 930's ever missed a beat. I was genuinely impressed.

The 930's trim receiver fits nicely in the hand and flows perfectly into the stock, making for rapid target acquisition and graceful lines. The receiver also features an easy-to-see and use receiver mounted safety and a nifty button that empties the magazine on demand for safe, easy unloading.

I used two 930's in Argentina. One was decked out in an attractive select walnut stock and forearm, while the other wore black, synthetic furniture. Both sported 28-inch barrels with a ventilated rib, a single gold bead, screw-in choke tubes (the guns came with three: IC, M and F), and porting, which did a great job of reducing recoil.

I alternated 930's each day and loaned my spare gun to Donny Patinaud, the aforementioned trigger-happy Floridian. In the field, I found that both 930's came up easy and pointed well. I also found them easy to operate. I hit pretty well with the 930, too, thanks to its slight muzzle-heavy feel, which helped me maintain my swing and further served to attenuate recoil.

Over the course of the three-and-a-half day hunt, Donny and I combined to fire over 4,875 shells through those two

shotguns without a single malfunction.

Given our reluctance to take a break from the action, we did not clean our guns between shooting sessions (a greed factor that would normally shut down most guns), but we did clean and lubricate them each night. Gas guns are notoriously dirty, so I was quite surprised to see how clean the guns were at the end of each day. They weren't spotless, of course—particularly when you consider we were using that relatively dirty-burning South American ammo—but they ran noticeably cleaner than some other gas guns I've used in Argentina, and were easy to get cleaned up and back in service.

When you consider that competitive shooters generally clean their guns after a 100 or 200-round tournament (hunter's simply do not have many options in North America to ever shoot 200 rounds at anything wild in one day!), our shooting several times that number in a day without a cleaning is quite a testament to the 930's durability.

And where there's durability,

"The high volume of rounds fired each day on a typical Argentine hunt far exceeds what most guns will face in a lifetime."

there's reliability. Our 930s took an incredible pounding, to say nothing of the intense heat generated as a result of the fast-paced shooting. In fact, they got so hot we were forced to pour cold water down the barrels to cool them down enough to handle. Through all the abuse, our 930s kept on ticking.

The new Silver Reserve is the first imported shotgun to wear the Mossberg International name. This Turkish-made over-and-under features a silver receiver with tasteful gold inlays and a box lock action that locks up nice and tight thanks to dual locking lugs.

The Silver Reserve's tang safety incorporates a barrel selector, and its chrome-lined barrels are topped with a wide, vent rib. Five screw-in chokes, dual extractors, and a fine piece of Turkish walnut round out the package.

I spent a couple of mornings hunting with a 26-inch, 20 gauge Silver Reserve. It weighed 6.9 pounds, thanks to its trim receiver, which gave it a nice, lively feel. Donny and I combined to put just over 2,100 rounds through that

little gun. We both hit well with it. Dennis put nearly 3,000 rounds through his 12 gauge Silver Reserve and was equally pleased. Both performed far above their price point.

A couple of days later and a few hours north of the dove fields, some of our friends were doing their best to wear-out the new waterfowl version of the 930 Auto on Argentina's ducks. Although the 30 duck limit (voluntary in Argentina!) kept the number of rounds fired a lot lower when compared to the dove hunting, the "ruinous environment" presented a whole different challenge for the guns. Once again, the 930 was up to the task, with the top gun firing over 650 rounds of heavy waterfowl loads in three days without a hitch. And I'm talking about some really adverse conditions. These guys told me they were in the mucky mud of flooded rice fields with only stacked reeds for a blind. With no place to rack their guns, and no place to sit other than on uni-stools that kept sinking in the mud, their 930s were often sitting in water up to their trigger guards.

And these were brackish marshes where getting to and from the hunting areas by boat subjected the guns to a constant, highly corrosive spray. The 930 took it all in stride.

They also took the opportunity to do some additional gunning using the Silver Reserve 12 gauge O/U's, the performance of which continued to impress. One of the guides commented that he couldn't understand how the Silver Reserve could only be in the \$400 range, especially after having so many of his clients show up with what he called "pretty" \$1,500-type guns that break

down by the second or third day of hunting.

If you're in the market for an affordable semi-auto or a quality double that won't break the bank, you would do well to take a look at Mossberg's latest offerings.

And, if you're in the market for the finest wing shooting on the planet, look to Argentina, where the food, drink, and wing-shooting must be experienced to be believed. I know I'll be back. And next time I'll again be toting a Mossberg. ■

Mossberg & Generation Next: A Perfect Fit

by Bob Humphrey

The future of hunting lies squarely on the shoulders of the next generation of hunters. However, it is the current generation's responsibility to make sure there is a next generation. We are challenged to do all we can to foster and encourage participation in our sport; including everything from creating opportunities to providing the right equipment. One company—Mossberg—has taken this challenge head on.

Perennial leaders in offering sporting arms of versatility and value, Mossberg has developed a full line of firearms specifically designed in both form and function for the next generation of hunters.

Fitting the shooter to the gun, or the gun to the shooter, is important for several reasons. If the gun doesn't fit properly, the shooter will have trouble mounting, holding and moving it. This, in turn, can lead to poor mechanics, missed targets (and later on, game), enhanced recoil effects and resultant flinching. It could discourage a newcomer right out of the sport. Proper fit, on the other hand, not only eliminates these negatives, but instills a sense of confidence in the shooter. The end result is a more positive experience that will foster more interest in participating.

Unfortunately, most guns are designed to fit a right-handed adult male between 5'8" and 5'10" tall and weighing from 170 to 190 pounds. That just won't do for a young or small-framed shooter. The most obvious difference between an adult gun and a youth or "Bantam" gun is the size of the buttstock. The important measurement here is not the stock itself, but the length of pull (LOP)—the distance from the forward face of the trigger to the end of the butt plate or pad. LOP greatly affects how well you can hold a gun and shoot it comfortably. If it's too long, the gun

A "Custom Fit" for Young and Smaller-Frame Shooters

From the beginner to the seasoned shooter alike, the 500[®] Bantam™, the 500[®] Super Bantam™ and 505 Youth™ Series pump-actions are the preferred choice of youngsters and smaller stature adults. Key safety features include an easy-to-see and operate ambidextrous top mounted safety, a special magazine tube limiting plug in .410 and 20 gauge models that renders the shotgun a "single shot" until the coach or guardian approves its removal, and a free cablelock to assist with safe storage. As part of our continued commitment to value and versatility, 12 and 20 gauge Bantam™ and Super Bantam™ models are fully interchangeable with standard size 12 and 20 gauge 500[®] model accessories, and come with a half-price certificate for a standard-size buttstock for young shooters who outgrow their Bantam dimensions.

Bantam Series models are available in 12 and 20 gauge and .410 bore

Safety is easy to see and operate.

Forearm Fully Frontward

Reduced distance between trigger and pistol grip portion of stock for smaller hands

Reduced length of pull allows for enhanced comfort and control for smaller framed shooters.

EZ-Reach™ Forearm— (12 and 20 gauge only) conveniently located closer to shooter for easier cycling operation

- Each 12 and 20 gauge Bantam and Super Bantam model includes a factory discount coupon for standard-sized stock
- Every Mossberg firearm includes a free gun lock

will tend to ride upward and outward during recoil, which causes a right-hand shooter to shoot low and left. It also creates a less stable, less comfortable and unbalanced shooting posture, and is more difficult to mount.

A shorter LOP however, is not the only thing you need to properly fit a youth or smaller-framed adult. Smaller people may have shorter arms as well.

A forearm that is too far forward causes a less stable, front-heavy posture. In the case of a pump-action firearm, a forearm that is too far forward also makes the cycling operation more difficult. Similarly, too long a barrel will also lead to a less balanced, muzzle-heavy gun.

Yet another consideration, and one that's often overlooked when designing a gun for a smaller-framed person, is their smaller hands and shorter fingers. That's why it's also important to have a more tightly curved pistol grip, making it easier to reach the trigger.

Three pivotal members of the distinguished 500 family, perfect for the younger and smaller-framed shooters: (from top) the multi-season 500 Bantam Field/Deer Combo in 20 gauge; the 505 Youth in 20 gauge for the beginner; and "The Gun That Grows With The Shooter"—the 500 Super Bantam Field/Deer Combo in 20 Gauge with Mossberg's innovative adjustable stock that allows the length of pull to be changed from 12" to 13" as the shooter grows.

Mossberg—Leading the way...

We've long known the importance of proper fit. Yet the firearms industry has largely overlooked the small-statured segment of the hunting-shooting population. Token efforts include designating a few select models as youth/ladies guns by merely cutting down the buttstock to reduce length of pull.

Something more needed to be done, and it's been Mossberg who's led the way. Long known as the industry leader in versatility and value, they've gone above and beyond in this case, offering not just a few models, but a specialized line of firearms dedicated specifically to this underserved market.

The 500® Pump-Action Family

Heading up this clan of family-oriented firearms is the 500® Bantam™ Series. This versatile line offers numerous configurations in 20 and 12 gauge, with each featuring Mossberg's EZ-Reach™ forearm, a shortened pistol grip, reduced LOP and shortened barrels, among many others; features that address all aspects of proper fit for young or smaller-framed hunters.

For more than a decade the Bantam line has provided hunters with a scaled-down version of "Dad's" favorite shotgun. And mimicking the versatility of the original 500, models like the Bantam 20 gauge Field/Deer Combo include a 22-inch smoothbore and 24-inch Slugster® barrel, making it an ideal gun-for-all-seasons for the up and coming hunter.

They could have stopped there, but the Mossberg folks recognized that there was a segment of the marketplace that was still not being properly addressed. Sort of a third generation, the 505 Youth™ was developed especially for beginners.

In addition to the beginner-friendly features of the 500 Bantams, it offers an even shorter stock LOP (12") as well as a shortened 20-inch barrel and magazine tube, resulting in a well-balanced, true-to-scale shotgun just for Junior. With more and more states abolishing minimum age restrictions on hunters, this is a great introductory firearm for young ladies and smaller boys.

Alas, kids eventually grow up so the marketing folks at Mossberg decided those kids should be able to have a

gun that grows with them. It's called the 500 Super Bantam™.

It begins life, like the 505, with a 12-inch LOP (one inch shorter than the standard Bantam). It also comes with an innovative one-inch stock spacer and second recoil pad that can be added when your youngster starts to sprout. Furthermore, if and when they're ready for a full-sized (14-inch-plus) length of pull, just turn in the certificate that comes in the box (12 and 20 gauge 500 Bantam and Super Bantam models only) for a 50 percent discount on the price of a full-sized stock—a very nice touch.

All 500 Bantam, Super Bantam and 505 Youth models feature the same quality and dependability of their grown-up relatives. They also feature a convenient, ambidextrous thumb-operated safety, removable magazine tube limiting plug, free lock and a 10-year limited warranty.

All 12 and 20 gauge models are drilled and tapped for optics mounting and you'll find that all field models are fitted with dual bead sights—a brass mid-bead and white front bead. This configuration is particularly effective at enhancing barrel/eye alignment and target acquisition by both new and experienced shooters.

A Touch of Class

Value is another of Mossberg's hallmarks. What Mossberg International initially set out to do with their Silver Reserve™ Series was to offer a high-quality over-and-under with the same classic lines, craftsmanship and reliability as the so-called "high-end" doubles, but at an affordable price. Having accomplished that, they then took the almost unprecedented step of building a youth/ladies version (see photo above).

Like its full-sized counterpart, the Silver Reserve Bantam™ features an under-lock design box-lock action for superior strength and low profile, chrome-plated chambers and bores, a set of five interchangeable

chokes, Turkish walnut stocks and an embellished receiver. The only difference is the shorter, 12½ inch length of pull. Now you can pick up a pair of fine doubles in "his and hers" or "father and son" sizes.

Plinkers

Mossberg recently expanded beyond shotguns and into rifles with the Mossberg International 702 Plinkster .22LR semi-automatic (actually it's more of a return, as some of the company's first firearms were .22 calibers). In doing so, they brought along the same philosophy that one size doesn't fit all.

A first for rimfire fans, the Mossberg International™ 702 Plinkster® Series consists of nearly a dozen different models. You can choose between a variety of stock finishes; and there are two scoped combos including the handy little Plinkster™ Bantam™, with a shorter (12¼-inch) LOP.

The new 802 Plinkster™ Bolt-Action comes with adjustable sights or in a Scoped Combo version, and the word on the street is that we should not be surprised to see a Bantam model coming soon.

Supporting Hunting and Shooting Education for Generations.

As the oldest family-owned firearms manufacturer in the United States, Mossberg has a long-standing tradition of supporting the many organizations that organize, educate, and help promote safety and safe firearms handling to the millions of men and women—both young and old—that take to the field every year.

The new 100 ATR Bantam features all the hallmarks of the Bantam Series, and sports a handsome cut-checked walnut stock.

Like the 500 Super Bantam before it, the new ATR Super Bantam features Mossberg's innovative adjustable stock, so that the rifle can "grow with the shooter."

For an added touch of class for the beginning uplander, Mossberg has added a Bantam model to the popular Mossberg International Silver Reserve Series. This 20 gauge shotgun features a Turkish walnut stock and forend and an embellished receiver just like its full-sized predecessors.

For a fun-filled day of plinking or pursuit of small game, the Mossberg International 702 Plinkster Bantam can't be beat.

Serious Hunting

Last but by no means least are the 100 ATR™ Rifles—available in no fewer than 20 different configurations. A no-nonsense, centerfire bolt-action, the ATR features a free-floating, button-rifled barrel that provides exceptional out-of-the-box accuracy. Its two long-action calibers, .270 Win. and .30-06 Sprg., and two short-action calibers, .243 Win. and .308 Win., offer an option for just about any North American big game animal.

And for the next generation rifle hunter, the ATR Super Bantam™ offers the same convertible synthetic stock design as the 500 Super Bantam; so the gun can grow with its owner.

I feel confident in saying this is surely a first in the rifle world and has got "home-run" written all over it. A 100 ATR Bantam™ (non-adjustable stock) is also new to the line, offered with a premium cut-checked American black walnut stock.

Both new models feature the same "true Bantam" dimensions, with a shortened length of pull, scaled-down pistol grip and reduced-length barrel. You'll find each model available in .243 Win. and .308 Win. calibers as well as the Super Bantam also being offered as a scoped combo with a factory-mounted, bore-sighted 3-9x40mm variable scope. What a great package!

Why Mossberg?

When you consider all the variables, no other gun company offers as many choices for the young or small-framed shooter. Whether they're after elk in Montana, turkeys in the swamps of Georgia, or squirrels on an oak ridge in Ohio, Mossberg has a gun specifically suited to the application, and to the stature of the man, woman, boy, or girl behind it.

In doing so they have sacrificed none of the durability and reliability that Mossberg guns are known for. And perhaps best of all, every Mossberg gun represents value, which means you get a lot of gun for not a lot of money. ■

The New 4x4 with distinctive laminate stock

4x4™ Bolt-Action Centerfire Rifle

Mossberg has built on the overwhelming success of their 100 ATR bolt-action rifle, using its no-nonsense, rock-solid design and affordability as the canvas for their latest rendition, the new 4x4 Bolt-Action.

Every bit as attractive as it is rugged, the 4x4 is offered in three distinct stock configurations, including an eye-catching, space-age polymer, a distinctive gray laminate or a handsome, select American black walnut model; each featuring Monte Carlo-style cheek pieces, slim-line grips, forend barrel vents, and soft, recoil-absorbing buttpads.

Other features include a handy detachable box magazine, smooth, quick-handling bolt, free-floating button-rifled barrel with a recessed muzzle crown, and factory-installed Weaver-style scope bases.

The new 4x4's are available in six of the most popular standard long-action and magnum hunting calibers to cover the gamut of North American big game, from the all-around .25-06 Rem. to the punishing .338 Win. Mag.

Right: The New 100 ATR Super Bantam allows shooters to adjust length-of-pull

100 ATR™ Super Bantam™ Bolt-Action Rifle

Mossberg's new 100 ATR Super Bantam is the perfect choice for the up-and-coming rifle shooter. It combines the same reliable design and affordability of the full-sized ATR with Mossberg's Super Bantam adjustable length-of-pull stock design, allowing the gun to grow with the shooter. The Super Bantam features a free-floating, button-rifled barrel for exceptional out-of-the-box accuracy, and a rugged synthetic stock, which includes a special spacer and extra buttpad for adjustability. And, the low-recoil short-action .243 and .308 calibers are ideal for young and small-framed shooters.

Every hunter, shooter or outdoor enthusiast will find something to love at www.mossberg.com

Mossberg International™ Silver Reserve™ Two-Barrel Combo Sets

The now well-known Silver Reserve Series features an under-lock design box-lock action for superior strength and low profile, chrome-plated chambers and bores, Turkish walnut stocks and embellished receivers.

If you've found yourself torn over which gauge to choose in an over-and-under shotgun, now you can have the best of both worlds.

The new Silver Reserve Combo Sets are now available with your choice of 12 and 20 gauge, or 20 and 28 gauge over-and-under barrels and forearms matched to each common receiver, making for a superb do-it-all O/U at an unprecedented price.

Synthetic Thumbhole Pump-Actions

With the '05 introduction of the 835® Ulti-Mag® Thumbhole model so popular, Mossberg decided to roll out three new models this year, featuring new, lighter weight synthetic stock and forearm configurations.

Synthetic Thumbhole turkey models can be found within the 835®, 535™, and 500® product lines, and are available in Realtree Hardwoods HD Green and Mossy Oak New Break-up camo finishes, as well as standard black synthetic. Each thumbhole model is equipped with a 20-inch, vent rib barrel, X-FACTOR™ ported turkey tube, and light-gathering fiber optic sights.

The 817 Bolt-Action

930 Home Security

Mossberg International™ 817™ Bolt-Action .17 HMR Cal. Rimfire Rifle

Combining the sleek style and feel of the Mossberg International 802 Plinkster™ bolt-action with the immensely popular .17 HMR caliber, Mossberg International has created a new 'super-rimfire' rifle that will appeal as much to the serious varmint hunting crowd as it does to the casual shooter trying out his or her aim on long-distance targets.

The action rests in a tough black synthetic stock and features a 21-inch free-floating barrel and recessed muzzle crown, combining for superb accuracy.

With the sizzling, long-range performance of the .17 HMR in mind, factory-installed Weaver-style scope bases are included with every model for quick and easy scope attachment; and you'll definitely want to mount a scope on this little tack driver.

930™ Autoloader Home Security

Continuing in their seemingly never-ending quest to inject the most versatility and value into a single firearm, Mossberg has found yet another use for their popular 930 autoloader.

The new 930 Home Security model features an 18.5-inch cylinder bored barrel, and is a dedicated home security gun, while the 930 Field/Security Combo model lets you turn your favorite 930 field gun into a year-round home security tool with the quick and easy swap of the barrels.

J.I.C.™ Sandstorm

Mossberg's J.I.C.™ (Just in Case) features the venerable 500 pump-action 12-gauge shotgun, with an 18.5" cylinder-bore barrel, brass bead front sight, a 3" chamber, synthetic pistol grip and forend, and sling swivel studs. The "case" is an impact-resistant, floating tube. The resealable top makes it airtight and waterproof (to a depth of 40 feet); and a nylon carrying strap makes it portable.

The J.I.C. Sandstorm (shown) features a desert camo finish on gun and carrying tube. It is joined by the blued J.I.C. Cruiser, and the J.I.C. Mariner, with Mossberg's proprietary Marinecote™ finish. ■

J.I.C.™ Sandstorm

Gun Test The 100 ATR™ All-Terrain Rifle

The ATR is offered in a variety of stock and barrel finishes and four calibers. Shown here: the .243 Win. Scoped Combo with a select walnut stock and the .308 Win. in Mossy Oak® Brush® camo.

Surveys show that higher-ticket production and semi-custom rifles are selling better than ever before, but the same holds true at the other end of the spectrum. Today, hunters who are on a tight budget – or simply don't want to pay for features and cosmetics they consider unnecessary – have many new options available to them in the way of bolt action rifles that sell at real world prices of less than \$300. One of the best examples is from Mossberg.

BY JON R. SUNDRA

SOLID AS A ROCK READY TO HUNT

somewhat similar to the Howa, but one which incorporates many subtle differences that not only make it unique, but also highly affordable.

One of those differences is that the ATR's receiver is machined from bar stock, and the recoil lug is a separate "washer" that's sandwiched between the barrel shank and receiver ring—just like on the Remington 700 and Savage 110. The bolt is fabricated from tube stock and a separate handle is collared and brazed onto the body. The bolt head is also a separate component. These are differences that are more a matter of methodology than of design, but the end result is that it is a more economical way to arrive at a finished action without sacrificing strength, safety, functionality or performance.

One of the more distinguishable features of the ATR is a flange on the left side of the bolt shroud. Why is it there? Well, without it, if while the bolt is removed from the receiver and the bolt shroud is somehow rotated (an unlikely event) with enough force to release the cocking cam from its retaining notch — in other words, de-cocking the firing pin — it might be possible to force the un-cocked bolt back into the receiver and close the action.

That means the firing pin would be protruding from the bolt face. If a cartridge is forcibly fed into the chamber in that mode... well, use your imagination. Now I personally know of no rifle that will accept its bolt in the un-cocked state, but if such an unlikely occurrence should happen with an ATR, the extension makes it impossible to push the bolt home.

It's common knowledge that the Mossberg philosophy has historically been one of offering highly serviceable rifles and shotguns at what we diplomatically refer to as value prices. We're talking solid, no-frills guns that can be had for very reasonable cost.

Enter the Mossberg® 100 ATR™ (All Terrain Rifle), which was introduced in 2004 and has been known to sell at some retail outlets for under \$250.00! You can't even buy a surplus Mauser action, have it barreled, and stick it in a cheapo after-market drop-in stock for that kind of money.

Which begs the question: What kind of rifle can you expect for under \$300 when the average selling price of a bolt action big game rifle is probably double that? And make no mistake; this is a genuine big game rifle according to the accepted requisite that a gun chambered for the .30-06 is indeed suited to taking on any of the world's non-dangerous game.

When we examine the 100 ATR we find that its design features, though familiar, are not found in similar combination in any other bolt gun. In many respects the action this Mossberg® most closely resembles is the Japanese-made Howa 1500. The Howa is a well-proven action that has been around in several guises since 1970, most notably as the highly regarded Weatherby Vanguard.

The Howa definitely qualifies as a time-tested action; therefore, the Mossberg folks really couldn't go wrong to use it as a starting point for designing their own action. In any case, the resultant 100 ATR is a rifle that is

T

The ATR's bolt head is counter-bored to fully support the cartridge rim, except for the extractor cut. The extractor reminds me of the Savage 110 in that it's housed in the face of the right locking lug and moves radially within a T-slot.

The bolt stop/release is a simple, one-piece component with an upward extension that juts out just behind the left side of the receiver bridge like on the Model 70 Winchester. The stop is directly actuated with no intermediate toggles or transfer bars. It's the simplest, and to my mind, most efficient way to get the job done.

Just as minor changes in the way the bolt and receiver are manufactured make for lower production costs, so too does the ATR's

Author Jon Sundra at the test range with the 100 ATR short-action rifle.

Gun Test The 100 ATR™ All-Terrain Rifle

injection-molded polymer stock. For one thing, the ATR utilizes a blind or “internal” magazine; this eliminates a floorplate of any kind, hinged or fixed, and by making the trigger guard bow integral with the stock, another separate component is eliminated.

Also, molded integrally into the stock are bases for sling swivels, eliminating the need for separate studs. The fact that these studs are of polymer, there’s no possibility for game-spooking “swivel squeak”—a common malady with steel studs.

The ATR’s fire control system is contained within a very sturdy, thick-walled aluminum housing. The two-position side safety blocks the trigger, and when engaged, the safety does not lock the bolt, so live rounds can be extracted with the safety on.

The metal magazine box is permanently affixed to the receiver, and the stamped steel magazine follower is powered by a rectangular coil spring. Two hex-headed machine screws mate the barreled action to the stock, where it is essentially pillar bedded by virtue of the receiver being supported by two narrow islands of stock material, plus a small area at the rear tang.

One of the surest signs that a new rifle has made the grade, as it were, is when it’s quickly followed by a short-action version. With few exceptions any newly-introduced bolt action rifle is first offered in a standard-length action because it can digest our most popular and best-selling game calibers, namely, the .270 Win. and .30-06 Sprg. And that’s what Mossberg did with the 100 ATR.

The 100 ATR is now offered in two action lengths. Note the factory-installed Weaver-type scope mount bases, which are furnished free.

Long- and Short-action bolts are identical except for about 5/8" in length. Coupled with the shorter receiver, a savings of about 4 oz. is realized.

The metal box magazine is attached to the receiver, a good idea when employing a blind magazine.

A coil, rather than a flat spring, powers the follower in all ATR models.

The plan was, if the gun proved to be as popular as the company hoped, they would quickly follow up with a short version to handle the .308 Win. family of cartridges, as well as providing a platform on which to base a future line of varmint rifles. In this instance it took Mossberg just over a year for them to commit to a short action, which they introduced at the 2006 SHOT Show. Now there’s a short-action ATR available in .243 Win. and .308 Win. to complement the original standard-length action.

For test and evaluation I of course asked for one of each. The standard-length example sent to me was chambered in .30-06 with a stock finished in Mossy Oak’s New Break Up camo, which is one of five variations offered; the others being your basic black, Mossy Oak Brush, Realtree AP, and Dura-Wood™ (simulated walnut).

Standard features are molded-in checkering on the grip and forend, a cheek piece, and a supple recoil pad. For the barreled action you have a choice of a matte blue finish or Marinecote™, a proprietary finish developed by Mossberg, which looks like matte stainless and affords added protection against rust and corrosion.

The sightless 22" button-rifled barrel, which measures .620" at the muzzle, is fully floated. As an added-value feature, factory-installed Weaver-style bases come with every non-rifle sight ATR model.

Out of the box our test gun in .30-06 weighed 7 lbs. on the nose. With a Weaver 4-16X aboard in Weaver rings, the field-ready rig weighed 8½ lbs. The short-action example sent to me was chambered in .243 Win. set into a walnut stock with cut checkering that is currently offered in the short-action only. Other stock options offered with the short-action include black synthetic, Mossy Oak Brush, and Realtree AP.

Except for the obvious difference in the stock required to accommodate the shorter receiver, our test gun was identical to the .30-06 version except that its overall length with the same 22" barrel was 5/8" shorter. With a Leupold VX-III 3.5-10x40 scope aboard in Weaver rings the walnut stocked .243 weighed 8 lbs., 6 oz.

Left: The new 100 ATR Scoped Combo in .308 Win. has a 22" barrel and is topped with a 3-9x40mm variable rifle scope.

“if performance and value are your paramount concerns, the 100 ATR is one helluva lot of rifle for the money.”

For testing the .30-06 we used five different factory loads in 150, 165, 168, and 180 grain, which covers the most popular weight range in this caliber. For the .243 we also went with five different loads. All shooting was done over the course of two range sessions from a bench at 100 yards under ideal conditions—overcast sky and no wind to speak of on both occasions.

As can be seen from the tables below consisting of five 3-shot groups with each

The ATR .30-06 as tested, with a Weaver 4-16x scope in Weaver-style rings and bases. A cleanly designed, handsome rifle.

load, both test guns acquitted themselves quite nicely, but then I expected nothing less.

I base that on having tested literally a thousand rifles over the years and I've come to

where I sometimes wonder what value these shooting sessions prove. I mean, if there's nothing radically wrong with a rifle's bedding, and the action screws, scope bases and ring screws are all snugged-up, I can almost bet that the typical bolt action sporter in any game caliber is going to average 1 1/2" to 1 3/4" with at least one of five factory loads tried, and often it's with two or three.

That may not sound very impressive these days when "MOA" is bandied about like it was the minimal standard, but believe me, for a sporter-weight rifle chambered in a big game caliber, groups even approaching 1" at 100 yards with consistency, is pretty rare. A rifle that will do 1 1/4" to 1 1/2" with two or more factory loads is one damn good-shooting rifle.

Will handloads improve on that? Yes, to be sure, but finding that load may not be easy because today's factory ammo is better than ever. Besides, when I test a rifle, the results are valid only for me and that particular rifle, on that particular day, with those given loads and lot numbers. Those results have no bearing on what the very next serial-numbered rifle of the same make, model, and caliber would do in my or anyone else's hands.

Having said that, if performance and value are your paramount concerns, the 100 ATR is one helluva lot of rifle for the money. Both guns fed smoothly and without a hitch, and extraction was spirited, with empties being tossed about three feet clear of the port. All in all, Mossberg's ATR's function and shoot with guns costing two and three times as much. And that's saying a lot. ■

If inadvertently de-cocked (top photo), the flange on the bolt shroud precludes the bolt from being pushed home (bottom photo).

The short-action ATR tested featured a walnut stock with cut checkering on grip and forearm.

Swivel loops attach to holes that are molded into the stock, negating the need for threaded studs. It also eliminates "swivel squeak."

Both 100 ATRs were tested using five different factory loads. The ATRs averaged groups at 100 yards from 0.95 to 1.90 inches.

Mossberg 100 ATR, .30-06

HOW MOSSBERG MAKES YOU A BETTER HUNTER

I think it's safe to say that the Mossberg family has built their reputation on producing shotguns of outstanding value.

But value is a consideration you make when buying a gun; once you're in the field with it, it's the furthest thing from your mind.

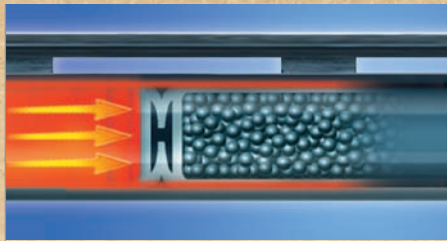

That's the time when the performance, durability, and the features of a gun come into play, because when it comes down to it, they have a direct bearing on your success.

And so often success in the field boils down to just a few more pellets in the pattern...or a better-fitting stock... or better sights... or a more ergonomic safety.

I'm talking features that make the man or woman behind the gun more successful, whether they're shooting clay targets, waterfowl, upland game, or whitetail deer.

Not only is there no compromising required when you opt for a Mossberg, but you'll often find features on their guns that are not offered on many competitive guns costing far more. Perhaps the best and most succinct way to describe those features and how they help bring game to bag is to look at them one by one.

Barrel Overboring— Each Mossberg 935 and 835 shotgun is overbored to 10 gauge bore dimensions. Unlike other 'backbored' brands, this unique design stretches the entire length of the shotgun barrel, providing a gas 'cushion' for the shot charge. This reduces friction and pellet deformation, resulting in exceptionally uniform, dense patterns that Mossberg overbored models are known for.

OVERBORING

A standard feature on Mossberg's 835[®] pump and 935[™] semi-auto shotguns in the Waterfowl, Turkey, and Field configurations. Overboring means that the bore, from chamber to choke, is several thousandths larger than the nominal .728" of a 12 gauge. The result is a reduction in felt recoil, but more importantly, less pellet deformation and tighter, more uniform patterns. Collectively, these 'benefits' are especially critical in the case of turkey hunting, where pattern performance is crucial to a hunter's success.

This fact has not been overlooked by the folks at Mossberg, as every dedicated turkey model is equipped with a specialized turkey tube. Ranging from the new X-Factor[™] ported tube to the venerable Ulti-Full[™] to the XX-Full variation for standard bore models, you will be hard-pressed to find a better choke system out there.

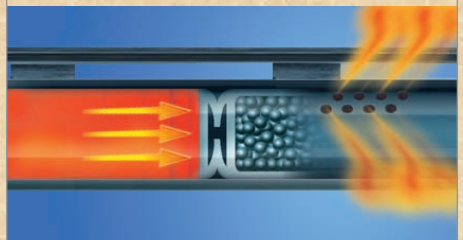

Every season it seems that I see more and more \$60 - \$70 aftermarket chokes at retail, and can't help but shake my head. After all, Mossberg turkey guns have likely been responsible for more turkey kills than any other brand out there. And let's not forget, they offer a mean waterfowl and field choke line-up as well.

A One-Two Punch— When paired together, Mossberg overbored barrel models equipped with X-Factor ported choke tubes make for an awesome one-two punch combination that puts birds in the bag.

PORTED BARRELS

By drilling multiple vent holes in the muzzle-end of the barrel just behind the choke, felt recoil is further reduced, as is the "muzzle jump" resulting from that recoil. Less muzzle jump means faster recovery of your sight picture and the time it takes to get off a second shot...or a third.

Ported barrels are offered in all iterations of the 930[™] Autoloader, and in most Turkey, Waterfowl, Slugster[®] and Field versions of the 835[®] and 500[®] models.

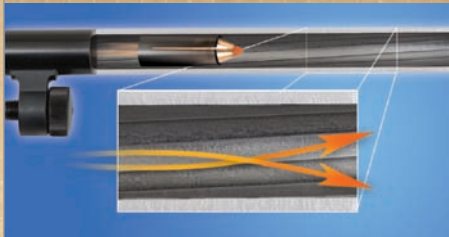

Factory Porting— Mossberg factory-ported barrels provide the distinct shooting advantages of lower felt recoil and reduced muzzle jump for a quick second shot recovery.

FULLY-RIFLED BARRELS

Mossberg pioneered the fully rifled slug barrel which debuted in the 500 pump action shotgun way back in 1988; the company has remained the leader in this field ever since. In conjunction with today's sabot slugs, 2" groups at 100 yards have become somewhat commonplace, whereas with the old Foster slugs out of a smooth bore you were lucky to hit a 12" circle at 40 yards.

Not only has accuracy been improved to the point of near-perfection, so too has the effective range of the rifled bore "shotgun." Today's sabot-clad slugs shoot flat enough that a buck standing 125 yards away is in deep doo-doo. Slugster rifled barrels are available on all models of Mossberg pump and semi-auto shotguns.

BY L. P. BREZNY

Fully-Rifled Bore— With the potent combination of a fully rifled bore and today's high-tech sabot slug ammunition, the Mossberg Slugster barrels offer slug-shooting accuracy and down-range performance beyond belief. At the heart of every Slugster barrel is a button-rifled bore and deep lands and grooves running the entire length of the barrel; each contributing to downright rifle-like accuracy at 100 yards.

CANTILEVER & RECEIVER-MOUNTED SCOPE SYSTEMS

All Mossberg 12 and 20 gauge shotguns feature drilled and tapped receivers, providing the option of adding conventional receiver-based mounts for scope installation.

Within the slug barrel category, you have the option of standard adjustable rifle sights, or Mossberg's integral, barrel-mounted cantilever scope mount. With the cantilever system the barrel and scope are one integral unit, so when it's removed and replaced with a smoothbore for whatever upland, turkey, or waterfowl hunting you've got on your agenda, you can switch back to a pre-zeroed deer gun in a matter of seconds...or vice-versa. Talk about versatility!

And now you can buy accessory rifled slug barrels for the 500®, 535™ and 835® models with factory-mounted, laser bore-sighted 3-9x40mm variable scopes, taking the guesswork out of setting up a scoped shotgun.

Integral Scope Base Configurations— A true time and ammo saver that provides the ability to switch barrels without having to go through the entire re-sighting process each and every time.

FIBER OPTIC SIGHTS

Fiber optic sighting systems have become all the rage over the last five years or so. Fiber optics gather and magnify ambient light to illuminate the sights for precise aiming even in the poor light of dawn and dusk, when the majority of big game, waterfowl and turkeys are most active. With the short to moderate ranges involved in gobbler and whitetail slug hunting, Mossberg's Turkey and Slug guns can be had with front and rear barrel-mounted fiber optic sights, fully adjustable for windage and elevation. On the Waterfowl end of the lineup, just about every model is offered with a special oversized fiber optic front bead.

Adjustable Fiber Optic Sights— Fully adjustable for windage and elevation, providing instant target acquisition in low-light conditions.

FULLY CAMOUFLAGED GUNS

Often the difference between success and failure can be a mere glint reflected off one's gun. Whether your quarry is waterfowl, deer or turkeys, a gun that won't give you away can't help but put another card in your hand. Virtually every model in Mossberg's shotgun lineup can be had in various Mossy Oak, Realtree and Advantage brand camouflage patterns. And it's not just the stock that's camouflaged; the entire barreled action is also covered in this attractive and highly durable finish.

COMBO GUNS

Every shotgun model, from the epochal 500 pump, through the 535, 835, 930, 935, and now the Mossberg International™ Silver Reserve™ over-and-under line is available in special configurations that include a second barrel.

You can choose among virtually any combination, from short, smoothbore barrels with interchangeable choke tube systems, mated with an accessory barrel specifically designed for turkey hunting, or a fully rifled barrel for deer hunting with sabot slugs.

Each and every Combo Set can save you money at the cash register, as the cost of the Combo gun is definitely less than if you were to purchase the gun and barrel separately.

If you've got multiple species on your hunting menu this year, the Combo angle just makes sense.

Today's high-tech, high-velocity sabot slugs and rifled barrel slug guns have changed shotgun deer hunting from a "wait-till-you-see-the-whites-of-their-eyes" proposition, to an event where the hunter can no longer be faulted for pre-heating the oven when a buck suddenly appears well over one hundred yards away.

Whitetailing the Mossberg Way

by Dave Henderson

According to industry figures, 4.1 million of the nation's 10-plus million whitetail deer hunters go afield each season with shotguns. That number is growing every year as shrinking wildlife habitat and growing human populations cause more and more municipalities to opt for shotguns over the potential "next-county" capabilities of some modern rifles.

Deer hunters have used shotguns for more than 100 years, with slug designs by German munitions giant Wilhelm Brenneke in the late stages of the 19th Century, and private designer Karl Foster of Massachusetts in the mid-1930s, providing most of the technology still used today. Prior to the 1980s, in fact, getting your deer gun ready for the season was simply a matter of changing loads in your rabbit/pheasant gun. Accuracy with the rifled slugs of the past fired through a shotgun with nothing but a front bead for aiming was problematic to say the least. Indeed, if you could hit a gallon jug at 40 yards with any consistency, you had a tack-driver.

That's no longer the case. Spurred by the fast-expanding market, development of slug loads and slug-shooting shotguns has advanced more in the last 20 years than just about any other aspect of the firearms industry. While Foster-style slugs and smoothbore shotguns still represent a major portion of the shotgun deer

hunting scene today, an ever-increasing number of today's hunters demand and expect more out of their equipment than their counterparts did just a couple of decades ago.

The state-of-the-art shooting system of today features a rifled-barreled shotgun loaded with high-tech, high-velocity, controlled-expansion sabot slugs. These slug loads can provide accuracy and ballistics out to 125+ yards that rivals that of some centerfire deer rifles. One hundred-yard groups of 1.5 – 2.5 inches are not uncommon with Mossberg slug guns and high-quality sabot slugs, and the effective range of today's newest loads is approaching 200 yards—thanks in large part to groundwork provided by engineers at O.F. Mossberg & Sons.

Slug It Out

Top: The Mossberg 930® Slugster® with Monte Carlo stock and integral scope base; the 500® Slugster® in Mossy Oak® New Break-Up camouflage with rifle sights.

A rifled-barreled shotgun loaded with high-tech, high-velocity, controlled-expansion sabot slug loads can provide accuracy and ballistics out to 125+ yards, rivaling that of some centerfire deer rifles. One hundred-yard groups of 1.5 – 2.5 inches are not uncommon with Mossberg slug guns and high-quality sabot slugs, and the effective range of the latest ammo/shotgun configurations is approaching 200 yards—thanks in large part to groundwork provided by O.F. Mossberg & Sons.

The Mossberg family recognized the potential of fledgling sabot slug designs as far back as the 1980s, and in 1988 introduced the world's first production rifled-barrel shotgun in the 500[®] Trophy Slugster[®]. The gun featured a 24-inch barrel with 1:34" rifling and an integral, cantilever scope base that allowed a scope to be mounted and removed with the barrel. This unique barrel system (pictured at right) was fitted to the receiver of the 500 pump gun that had been the mainstay of the Mossberg product line since its introduction in 1961.

The 500 was an innovation itself in that it was the first pump with a disconnecting fire control system that forced the release of the trigger with each cycling of the action. The design made it impossible for the gun to fire when the trigger was inadvertently depressed while the action was cycled.

All Mossberg pump and semi-auto Slugster models are offered in 'integral scope base' configurations, a true time and ammo saver that provides the ability to switch barrels without having to go through the entire re-sighting process each and every time.

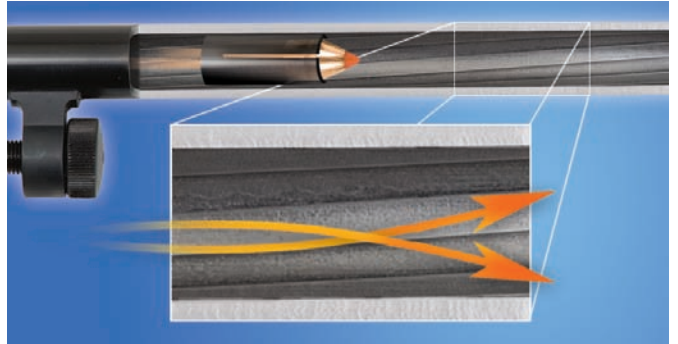

Right: A Monte-Carlo stock can be found on special 930 Slugster models (shown). These stocks are specifically designed to provide shooters with an elevated comb height for optimum eye/scope alignment.

Another noteworthy feature of the 500 was its European-style rear-of-the-receiver sliding thumb safety, which is equally accessible to both right- and left-handed shooters—a feature that has been passed on to all subsequent Mossberg shotgun models.

The rifled barrel innovation grew out of a working arrangement with sabot slug pioneer Bob Sowash of the California-based Ballistic Research Industries (BRI), and has grown exponentially over the years as dozens of other ammunition manufacturers have introduced similar sabot slug designs.

Adapting a concept used in tank and artillery ammunition design, the sabot slug is a less-than-bore-diameter, more aerodynamic projectile encased in a bore-filling fall-away plastic sleeve. This allows the cavernous shotgun barrel to throw a smaller-diameter, more efficient projectile as the rifling grips the plastic sleeves and imparts a stabilizing spin to the whole unit. The combination of the sleek, under-bore-sized slug and the 27,000 rpm spin introduced by Mossberg's 1:34" rifling gives sabot slugs a much further effective range than hulking full-bore slugs fired from smoothbore barrels.

Styles to Fit Every Shooter

One of the best-selling shotguns in the world, there's a Mossberg Slugster for virtually every deer hunter, regardless of experience, age, gender or stature. Following Mossberg's lead, every major shotgun manufacturer today offers at least one model with a rifled barrel. Mossberg offers seven distinct product lines featuring Slugster configurations, including the 935 Magnum™, 930™ Autoloader, 835™ Ulti-Mag®, 535 ATS™, 500®, 500® Bantam™, and 500® Super Bantam™ — with the 935, 835, and 535 being the only rifled-barreled shotguns in existence with 3½-inch chambers.

Within the 500® pump-action line alone there are six 12- and 20-gauge versions of the Slugster, all with 24-inch rifled barrels, featuring either integral scope mount or adjustable rifle sights.

All are available in traditional wood stocks with blued steel, or with synthetic stocks entirely covered in attractive and highly functional Mossy Oak New Break-Up and Realtree AP camouflage patterns.

One Gun Versatility: The 500 Super Bantam Combo simply does it all—it's a multi-season, multi-game-ready gun right out of the box, and features an adjustable spacer and recoil pad system that allows its LOP to be adjusted from 12 to 13 inches for young or smaller-statured hunters, and an EZ-Reach™ forearm for more efficient cycling of the gun. A 24-inch rifled slug barrel with adjustable rifle sights is teamed with a 22-inch bead-sighted field barrel for two times the fun in the field.

With the Slugster family—now Dad, Mom, and the kids can each have an accurate, safe Mossberg deer gun that fits their individual needs. The versatility afforded by 2¾, 3, and 3½ inch slugs; the reduced recoil of a gas-operated system; shorter, thinner stocks and easier-to-reach forearms for young and smaller shooters, are all features that can be found in one or more Mossberg slug guns.

More States Are Sluggin' It Out Over Whitetail Deer

Currently, 23 states mandate the use of shotguns for deer hunting in at least part of their hunting areas, and as the human population continues to encroach on wildlife habitat, more states are expected to soon follow.

Delaware, Massachusetts, New Jersey and Rhode Island allow only buckshot or slugs, while Illinois, Indiana, Iowa and Ohio require the use of slugs only. Pennsylvania, historic home of the American rifle, now restricts more than 100,000 of its hunters to slug guns and muzzleloaders by mandating special regulations areas around Philadelphia and Pittsburgh. New York has nearly 400,000 slug hunters, and even such frontier outposts as Missoula, Montana, and Edmonton, Alberta, have shotgun-only zones in their suburbs.

Combos: Cost-Effective All Season Hardware

A rifled barrel dedicates a shotgun to deer hunting since it isn't designed for patterning conventional shotshells. But these versatile guns are easily and economically adapted to turkey, waterfowl and small game by simply replacing the rifled barrel with a smoothbore and screw-in choke tubes.

The 935 Magnum, 930, 835 Ulti-Mag, 535 ATS, 500, and 500 Super Bantam all come in Field/Deer, Turkey/Deer or Waterfowl/Deer Combos that include a 24-inch rifled barrel, and a suitable smoothbore barrel and choke system. The heavy-duty 935 and 835 models feature overbored (.775 inside diameter compared to normal .729 for 12 gauge) barrels that improve patterning with magnum size loads while reducing felt recoil.

The 930 and 935 models include Mossberg's Stock Drop Spacer System whereby the height of the comb and cast (left or right cant of the stock) can be changed to suit individual shooters; it's a feature found on only a few guns, all of which are far more expensive.

Build Your Own Combo

Want all-season flexibility but already own a tried-and-true Mossberg shotgun you wouldn't hit the field without? No problem. Outfit your favorite gun for another season with one of the many Accessory Barrels available across just about all product lines. The change can be made in just minutes, without tools— and is far cheaper than heading to the counter at the sporting goods store for a separate season-specific model. ■

3 SHOTS IN 3 SECONDS!

NEW I230IR Infrared

with patented **BURST MODE TECHNOLOGY**

Stealth Cam scouting cameras are equipped with Burst Mode™ technology, a patented feature that gives you an advantage in tracking that elusive trophy, capturing more images **three times faster** than other game cameras. And, with new models to choose from, including our I230IR infrared model, Stealth Cam delivers the most extensive line of scouting cameras and diverse accessories anywhere on the market.

2.0 Megapixel crisp black & white digital imagery

SD card slot accepts up to 2 GB card

Illuminates up to 30 ft. using 27 infrared emitters

Shoots 10 second video clips, day or night

No Flash, won't spook game or intruders

Finding Even Greater Value in One of the World's Most Affordable Lines of Shotguns and Rifles

by Mark Kayser

Above: The 100 ATR Scoped Combo comes in four popular calibers. The combo is topped with a 3-9x40 variable scope finished in black or silver to match the barrel. Below: The Silver Reserve 20/28 Gauge Combo Set gives hunters two barrel set options for less than many O/U's cost for a single barrel set.

Combo Up!

If you've priced a new shotgun or deer rifle recently you know it can represent a major investment. Considering the fact that the percentage of the average American workers' discretionary income continues to decrease, getting the most "bang for your buck" on a firearm purchase looms ever more important.

Instead of purchasing two or three guns to handle the chores of deer, turkey, upland birds and waterfowl, many hunters are leaning toward the versatility offered by combination firearms. These specialized guns accept different chokes, barrels, and stock configurations to meet a variety of hunting situations. Combination packages vary; some offer factory-mounted riflescopes (no more hassling over selecting the right optics!); some offer barrel and choke options, and even kits to modify length of pull for growing youth or smaller-framed hunters. By shopping smart you may be able to purchase one firearm capable of fulfilling all your needs. And it so happens that Mossberg, America's oldest family-owned and operated firearms manufacturer, offers more such guns than anyone else – a fact not lost by the millions of Mossberg owners around the world.

So, if you're looking for that perfect combo package, I've done your homework for you, and put together a list of some of the most popular Mossberg combo offerings around...popular enough to make them the worlds largest shotgun manufacturer in the world!

100 ATR™ Scoped Combo

More than 10 million hunters can't be wrong; that's how many venture afield each year in search of America's most popular game animal, the Whitetail deer. And the most popular gun for such a pursuit is the bolt-action centerfire rifle.

Best known of course for its highly affordable shotguns, Mossberg introduced the 100 ATR™ (All Terrain Rifle), one of the most well-received, affordable centerfire rifles on the market today. Making it an even more outstanding value is the new Scoped Combo configuration, which offers a factory-mounted and bore-sighted 3-9x40 variable scope at a package price that simply astounds. Indeed, 100 ATR Scoped Combo can be found at nearly any gun dealer for less than than most other quality bolt-action centerfire rifles alone!

The 100 ATR Scoped Combo comes standard in .30-06 Springfield, America's most popular deer caliber, as well as .270 Win., .308 Rem., and .243 Win. It's cradled in your choice of American black walnut or synthetic stocks, providing for a free-floating barrel for the greatest accuracy and stable point of impact under fluctuating weather conditions. The button-rifled barrel is 22 inches and of medium sporter weight for a solid, steady hold when afield. A matte blue steel barreled action or Marinecote™ (a propriety stainless-like finish that provides added protection against rust and corrosion) finished models are offered along with several stock finishes to suit your taste.

Value-packed Scoped Combos are also available in Mossberg's new 4x4 Rifle, and in their two .22LR rimfire models—the Mossberg International 802™ and 702 Plinkster.*

Variable Rifle Scopes—To help rifle owners eliminate the often frustrating and expensive task of selecting the correct rings, bases, and scope for their 100 ATR or 4x4 Rifle— Mossberg has taken the guesswork out of it for you. Their bolt-action models are offered in Scoped Combo sets that feature a factory-mounted, bore sighted 3-9x40 variable centerfire rifle scope in two versions, to match the barrel finish. With Scoped Combos, the added value comes straight out of the box!

500® Super Bantam™ Field/Deer Combo

Without question the recruitment of new blood, youngsters in particular, is critical to maintaining our country's rich hunting heritage. Toward that end, Mossberg offers the 500 Super Bantam Combo, a 20 gauge set-up that is equally effective in upland fields, marshes, and forest.

The Super Bantam Field/Deer Combo comes with two interchangeable barrels, both with 3" chambers. One barrel consists of a 22" smoothbore with a dual-bead, ventilated rib and Accu-Set™ chokes in Improved Cylinder, Modified and Full; the other is a 24" fully-rifled slug barrel, ported to reduce recoil, with adjustable open sights, and the receiver is tapped to accept scope mount bases.

The Super Bantam's buttstock and EZ-Reach™ forearm are scaled to the younger shooter and smaller-framed adult, while also equipped to enable one to customize the fit as the shooter grows. As it comes from the factory, the buttstock has a 12-inch length of pull, a full inch shorter than the standard Bantam. Included, however, is a stock spacer and a second rubber recoil pad to increase the length of pull to 13 inches. Also included with each Super Bantam is a certificate from Mossberg for a 50 percent discount on the price of a full-sized stock, so the same gun can see a hunter through his beginning stages to being a seasoned pro.

Weighing just 5-1/4 lbs., the Super Bantam is an easy handling firearm. The entire gun, including the two barrels, carries Mossy Oak's New Break-Up camouflage finish that's extremely durable as well as effective. The Super Bantam Combo is truly a do-everything gun for the growing shooter at a remarkably affordable price.

535 ATS™ Turkey/Waterfowl Combo

Two of the toughest birds you'll ever encounter are turkeys and geese, and the ideal gun for each is quite different. The answer for many hunters who can't justify the purchase of two guns can be something like Mossberg's 535™ Turkey/Waterfowl Combo package. Here's a slide-action 12 gauge that comes with two smoothbore barrels—the Turkey barrel is 22", with a vent rib, an adjustable fiber-optic sight, and is equipped with an XX-Full turkey choke. The Waterfowl barrel, which includes an Accu-Choke tube set (Improved Cylinder, Modified, Full), also sports a vent rib, but is 28" long, and has a fiber optic front bead for quick target acquisition in low light—like early dawn or dusk when ducks and geese are most active. Both barrels are chambered for the potent 3 1/2" 12 gauge magnum, so they also digest 2 3/4" and 3" shells without hassle.

Another value feature that comes standard with the 535 Turkey/Waterfowl Combo includes what Mossberg calls a Uni-Line™ receiver which, in conjunction with a special comb design on the stock, allows easier, faster sight alignment and target acquisition. This, combined with the gun's relatively light, 6 1/2 lb. weight makes for a very fast-handling package. And Mossberg's thumb-operated, receiver-mounted safety is equally fast and convenient for both right- and left-handed shooters.

Silver Reserve™ 20/28Ga. 2 Barrel Set Combo

There's nothing like the feel of a sleek over-and-under shotgun in your hands, especially when the flush of a cackling rooster explodes from cover so close by that you can feel the pulses of air from its powerful wingbeat. Mossberg would like every upland enthusiast to experience shouldering a fine over-and-under—that's why they introduced the Mossberg International Silver Reserve series. For the upland hunter who enjoys pursuing a variety of species, the 20/28 Gauge Combo provides all the answers without the pricey entry fee normally associated with switch-barrel double guns, or any double gun for that matter. At the heart of this elegant shotgun is a sturdy, low-profile box-lock action with dual-locking lugs. Both barrel sets feature chrome-plated chambers and bores, and a wide ventilated rib. Even with the heavier 20 gauge barrel set in place, this gun weighs less than 7 lbs., making it extremely responsive and a pleasure to carry, even on long hunts. Each Silver Reserve barrel set comes with the "Sport Set" choke tube package, which includes two improved cylinder chokes, modified, improved modified and full chokes for each gauge. An ambidextrous thumb-operated, top-tang safety and barrel selector sits ideally on the rear tang for quick and simple field operation. Regardless of the upland application—close-flushing coveys of quail, exploding grouse, or rocketing pheasants, the Silver Reserve 20/28 gauge Combo is up to any challenge.

Over-and-Under Combos—Mossberg offers their Silver Reserve double guns in two Combo sets: the 20/28 Gauge shown above, and a harder-hitting 12/20 Gauge Combo. Both feature walnut stocks and forends, and a silver receiver with gold-engraved game scenes.

responsive and a pleasure to carry, even on long hunts. Each Silver Reserve barrel set comes with the "Sport Set" choke tube package, which includes two improved cylinder chokes, modified, improved modified and full chokes for each gauge. An ambidextrous thumb-operated, top-tang safety and barrel selector sits ideally on the rear tang for quick and simple field operation. Regardless of the upland application—close-flushing coveys of quail, exploding grouse, or rocketing pheasants, the Silver Reserve 20/28 gauge Combo is up to any challenge.

930™ Field/Security Combo

After the Hunt is Done—Not all guns get put away when hunting season ends. The new 930 Field/Security Combo doubles up for home security use with a quick change from the 28" Field barrel to the 18.5" Home Security barrel. Consumers should look for Mossberg's two barrel Combo sets—available for all autoloader and pump-action models—displayed using their innovative Combo Clamp™ (as shown for the 930 and 835 Ulti-Mag below) at local retailers.

Sometimes combination firearms aren't just for hunting. When you finish the hunt, it's comforting to know your shotgun has the potential to provide safety for you and your family. That's exactly the role at which Mossberg's 930 Field/Security Combo excels. Dressed in a no-nonsense black synthetic stock, the 930 autoloader is chambered for the powerful 3-inch 12 gauge, but of course it also takes 2 3/4 inch loads as well, thanks to its self-regulating gas system which greatly reduces felt recoil.

The Uni-Line receiver design provides instant sight alignment with your target, which can be a critical advantage when confronting an intruder in your home or business in semi-darkness. Helping achieve the perfect fit, Mossberg includes a set of custom designed spacers (Stock Drop Spacer System), which allows one to quickly customize the comb height for the fastest possible target acquisition.

Other standout features that come standard on the 930 that are either not offered (or cost far more) on other guns is Mossberg's EZ-Empty™ magazine button that instantly releases the contents of the magazine; an ambidextrous thumb-operated safety ergonomically mounted at the top rear of the receiver; and Mossberg's Accu-Choke System which includes an improved cylinder, modified and full choke to tailor the gun for just about any field and security application.

Even "More Gun for the Money"

Generations of hunters and shooters have come to expect feature-packed firearms at a reasonable cost from the folks at Mossberg. Whether it be a two-barrel set that allows hunters a second season of game hunting, a ready-to-hunt centerfire rifle equipped with a bore-sighted scope, or a field shotgun that pulls double duty for home security use, Mossberg's wide range of Combo products should do nothing but help reinforce this reputation for years to come. ■

Less Gun = Easier Run: Equipment can make all the difference to the run-and-gunner. Models like the Mossberg® Thumbhole make for a steadier, more comfortable shot—plus shorter barrel lengths and new adjustable stocks like the Mossberg® Tactical Turkey™ reduce weight for the hunter on the move.

Gobblers (and Guns) On the Run!

In today's hurry-up, NASCAR obsessed world, the run-and-gun turkey hunter should feel right at home. With hunting videos and outdoor TV shows conveniently editing out the inherent dead time involved in chasing gobblers in the real world, it's no wonder so many hunters not really familiar with the game are convinced that calling up a tom is as simple as driving between covers, stepping from a vehicle, and harping on a yelper.

BY SCOTT BESTUL

(Top) 835[®] Ulti-Mag[®] Synthetic Thumbhole and 535 ATS[™] Tactical Turkey[™]

To a diehard run-n-gunner like myself, 'taking it to the bird' is an appealing tactic...

after all, I get enough sitting-time in duck blinds and deer stands each fall, so keeping my legs under me is a refreshing change when it's time to put my tag on a gobbler. But alas, too many people misunderstand the run-n-gun game. They envision a contest played at fast forward speeds; a moving chess match where an adrenaline-propelled hunter races from one wood-lot to the next, maxing out his calls until a bird gobbles bloody murder, struts into the gun, and behaves like some reject from "Stupid Pet Tricks." Reality, of course, paints a far different picture.

The truth is that even the best run-n-gunners know the tactic involves more hurry-up-and-wait than almost any other form of hunting out there. The

reason we run-n-gun is because we run up against a situation where the turkeys aren't acting the way they're supposed to, so we decide to wander until we find a place where they DO know how to behave.

Somewhere, we figure, there will be a lonely tom that knows how to play the game, and we're going to travel until we find him. It's a long-shot move, and one that can max out your gas tank, your legs or your psyche before a suitable turkey is found.

Run-n-gunning is also, in my mind, one of the most demanding tactics on equipment. You'll rip more pants, wear out more boots and lose more calls than if you simply hunkered down in a blind and waited. And then there's that gun you must tote. In many ways, it's the cornerstone of your whole outfit, and it better be up for the complexities of run-n-gunning.

What complexities, you ask? Well, for starters, the gun has to be light, short and easily maneuverable. That long-barreled fencepost is fine when my posterior is plunked in a blind, but start lugging it over ridges and through valleys and I'm wishing I'd invited an arms bearer along.

This puts guns like the Tactical Turkey Series and Thumbhole models at the top of my list; hovering around 7 pounds, they make for an easy tote, especially with a sling attached, keeping my hands free while letting my shoulders—not my arms—carry the weight.

The same holds true when I'm blessed with multiple properties I can visit by simply hopping in a truck and buzzing through a 10-minute drive. When I reach my destination, I want a shotgun I can slip in and out of a case as slickly as my vehicle slides down a Missouri mud road.

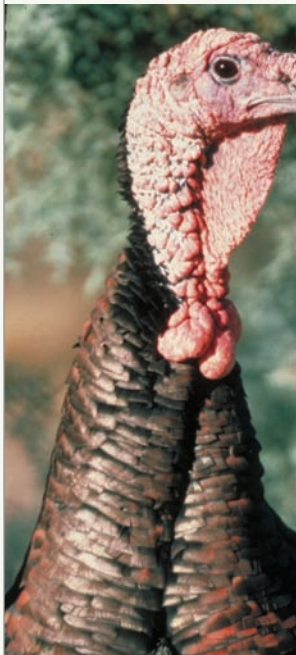

With a 20" barrel, ported choke tube, and slim-profile fiber optic sights, my 835[®] performs like a dream gun, whether I'm scrambling to gear up and go after a hot-talking tom, or loading my gear back into the truck to hit the next spot.

Of course, the part of run-n-gunning that never makes it to the Big Screen comes next: the waiting. My journals remind me that suicidal gobblers are getting increasingly rare, which means that I'm going to have to set up right, call pretty, and bide my time before even the hardest-talking tom will slip into gun range. Hard experience has also taught me that gun fit and comfort are everything in such a situation.

Start fidgeting with a gun that's too long, too heavy, or just too unwieldy and I know that spooking an incoming bird is a certainty. That's where innovations like Mossberg's Tactical Turkey[™] and Thumbhole stock models truly shine. Sure, they "look different" than traditional turkey guns, but when it comes to the maximum comfort demanded when I have to spend long minutes at the ready, I've learned to appreciate the difference such features can make. And when I say "look different," I mean "bad," as in good. These models definitely fit into the hard-core, "I wouldn't want to be a turkey," line of specialty guns.

Occasionally, I'll find a gobbler willing to read my script – a bird that simply makes the commitment to find the hen he's been hearing and make one of those strutting approaches that keep me dreaming of April all year long. No time for screw-ups now; the gun has to point easily, aim like a deer rifle, and deliver a payload guaranteed to keep a tom down for good. For many hunters, getting a gobbler into gun range seems almost anti-climactic, but many years of guiding turkey neophytes has proven an in-your-face turkey is anything but a done deal.

There's a lot of air surrounding a gobbler's head, and if the shotgun I'm toting isn't equipped right and up for the task, chances are good I'm going to find that open space.

Which manufacturer is serious about turkey hunting? Only one gun can pass the run-and-gun turkey test.

“That long-barreled fencepost is fine when my posterior is plunked in a blind, but start lugging it over ridges and through valleys and I’m wishing I’d invited an arms bearer along.”

Here’s where Mossberg really shines.

They start with fiber optic sights designed to keep the shooter’s head on the stock and aiming—rather than pointing—the gun at the target. If you’re a scope or red-dot shooter, the receiver is drilled and tapped to accept your favorite setup. No fumbling for the safety, either; the thumb-operated mechanism rests at the top of the receiver, easily accessed and operated with minimal movement.

Even better, total concealment is nearly guaranteed, thanks to the line-up of weather-beating camo finishes, offered in many popular and effective flavors, including Realtree Hardwoods HD Green, Mossy Oak Obsession and Mossy Oak New Break-Up.

Making the shot lethal is the next step, and the Mossberg line-up can deliver a payload that insures your tag goes on the bird. With a 3½” chamber (935™, 835®, 535™ models), they’re capable of handling these Howitzer-style loads that have been developed for modern turkey guns.

At the other end of the barrel, X-FACTOR™ ported chokes (see inset at right) feature a .695 constriction that keeps shot patterns dense enough to kill gobblers that simply teased us only a few years back. And while many hunters shop for expensive after-market choke tubes, Mossberg buyers get a choke perfectly matched to the gun they purchase right out of the box.

After all, Mossberg knows a thing or two about putting turkeys on the ground.

Over two decades of turkey hunting has made me a pretty humble man, but I can say this for certainty: One of the toughest questions for any turkey hunter to answer is always “Should I move or should I stay put?”

That is the question every run-n-gunner must answer at some point during a hunt. There are gobblers, naturally, that demand every scrap of patience one can muster, birds that require us to sit and wait, then sit and wait some more.

But other turkeys require a more mobile approach;

Mossberg’s X-FACTOR™ ported choke features a .695 constriction that keeps shot patterns dense enough to kill gobblers that simply teased us only a few years back. And while many hunters shop for expensive after-market choke tubes, Mossberg buyers get a choke perfectly matched to the gun they purchase, right out of the box.

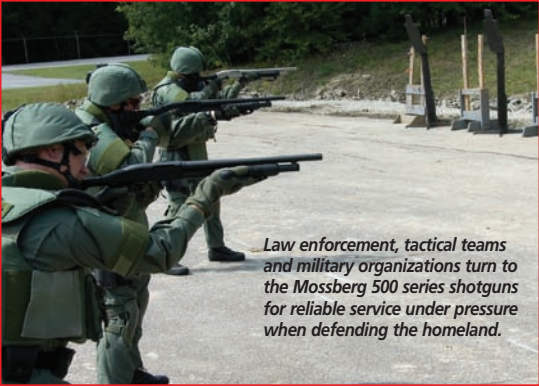

a willingness to be sometimes bold, sometimes daring, and always willing to take the game to a bird with cement on his feet. Tote a Mossberg turkey gun, and you’ll have a turkey slayer that’s up for any tactic you choose. ■

Should I Stay or Should I Go?

	JUST OUT OF RANGE	FAR AND RELUCTANT	LEAVING THE SCENE
	60 YARDS	70-80 YARDS	80+ YARDS
	If a gobbler is hot and reasonably close, don’t even consider a move until you’ve exhausted your calling options. If all you’ve offered are yelps and clucks, toss in some cutting, cackling, fighting purrs, or even gobbling (if it’s safe to do so) to light a fire under him. Switch your call types, too, from a box to a slate to a mouth call, for example. Often, the absolute best move is to give the bird a healthy dose of silence. Cats aren’t the only thing killed by curiosity.	If your bird is gobbling and pacing back and forth, there could be an obstacle—such as a fence, ditch, or creek—that’s blocking his approach. On the other hand, he could just be biding his time. If you can actually see that there’s an obstruction, let the bird drift away, then plan your move. Otherwise, your safest bet is to wait awhile. An extra half hour or so may be all that’s needed to bring this bird into range. If not, it will only strengthen the case for moving.	If the tom is talking but walking away, chances are he has company—and you’ve got little to lose by moving on him. But that’s only practical if you can do it without bumping the bird. Study the situation. Look for a ditch, swale, line of trees, or bushy fenceline to hide you. If in doubt, stay put. If you do move, be conservative. Closing the distance or repositioning even slightly on a tom will often jar a gobbler into action, putting him right in your lap.

Owning the right shotgun is important, and the Mossberg 500 Tacticals are a great place to start—but getting the training you need to properly respond in a crisis is essential. Ranges staffed with trained professionals can help you in basic defensive techniques.

Law enforcement, tactical teams and military organizations turn to the Mossberg 500 series shotguns for reliable service under pressure when defending the homeland.

DEFEND YOURSELF WITH THE GUNS THAT PROTECT THE HOMELAND

BY PAUL MARKEL

DEFENDING YOURSELF AND THOSE YOU LOVE DOES NOT HAVE TO BE A COMPLICATED AFFAIR.

You should, however, be armed with both the proper hardware (guns and ammunition) and software (training and information) to deal with a potentially life threatening experience. Material from both of these categories is readily available for those with the forethought to seek them out.

When I say "forethought" I am talking about having what you need before you actually need it. Running to the gun shop an hour after the riots have started is not the ideal way to deal with the crisis. In this circumstance, you will likely find the gun shop locked up, most often by government decree.

This applies double for training. You can't simply will yourself to be physically and mentally prepared to fight. The materialization of a crisis does not instill supernatural skills from within. If adequate training has not already taken place you will be acting on instinct alone, and mere instinct is no way to protect yourself or others.

While there are many reasons to keep a high quality defensive handgun available, there are as just as many for including a long gun on your list. Three come to mind immediately: 1) sheer power, 2) ease of operation/target engagement, and 3) the intimidation factor.

Ballistic power is pretty simple to understand. No matter what type of duty/self-defense handgun you have, a long gun has greater potential ballistic power. Yes, "birdshot" is not as powerful as a bullet from a .45 ACP, but the prospect of being on the receiving end of a load of 00 buck is more frightening than a handgun bullet.

As for ease of operation and target engagement, it's just plain easier to aim and hit your target with a long gun than a handgun, especially under the stress of attack. You have a longer sight radius (reduced margin for error) and three contact points (both arms and shoulder) to stabilize the gun versus two.

Lastly, the psychological or intimidation factor cannot be ignored in a defensive firearm. When it comes to dealing with those who would prey upon us, these creatures understand one thing; force or the threat of force. The simple truth is that the presence of a clearly visible long gun, in this case a shotgun, is a considerable deterrent to society's predators. No, holding a shotgun is not a guarantee that you will be unharmed, but rare is the bad guy willing to take on someone so armed. There are too many easy marks out there to chance a run-in with a big gun. So, just what kind of gun are we talking?

Mossberg's 12 gauge defenders; The 500 Tactical (top) features a Marinecote finish and an adjustable stock. The Tactical Cruiser sports a pistol grip and unique "image enhancer" muzzle.

The six-position retractable stock holds five extra shotshells.

500® TACTICAL™

The Mossberg 500 is one of the most universally known and user-friendly pump-action shotguns in the world, the newest iteration of which is the 500 Tactical. Based on the 500 action, the Tactical shares the common features of the line, but has a number of unique attributes. The first thing you will note is the availability of the contrasting Marinecote™ metal finish configuration, and the synthetic black forearm and adjustable pistol grip stock.

The stock is a six-position retractable version with a rubber recoil pad (photo at left). A side-saddle shotshell holder (that can be mounted on either side of the stock) holds five additional shells.

Another new feature found on several Mossberg shotguns is a hand strap located under the forearm (see next page), which aids the shooter with a more positive hold while rapidly cycling the action. The manual safety is Mossberg's ambidextrous design found at the rear top of the receiver.

As for the barrel, the Tactical uses a standard 18½ inch tube with a cylinder bore choke. The chamber will accept standard 2¾ and 3-inch shells. A five-round tubular magazine feeds the gun.

500® TACTICAL CRUISER™

Then there's the Tactical Cruiser, another specially modified version of the 500 pump. This gun is unique because of the mission-specific features Mossberg has added. Most prominently displayed is the toothy "image enhancer" located at the end of the barrel. This item is also known in the SWAT community as a stand off. The Cruiser has a pistol grip in place of a standard stock, which makes the gun a bit lighter and more compact, and better suited for use in confined spaces.

Both models sport a forearm strap to assist in control of the gun.

Like the 500 Tactical, the 500 Tactical Cruiser has the new hand strap (inset at left) to help keep the action hand from slipping forward on the forend during rapid-fire situations. A large white dot front sight comes standard for quick indexing on a target.

As far as specifics are concerned, the Tactical Cruiser has an 18½" barrel so it is not a Class III firearm. The barrel is cylinder bored and the chamber will again accept 2¾ and 3-inch 12 gauge ammunition. The tubular magazine holds five rounds.

RANGE TIME

I worked with both the Mossberg Tactical and Tactical Cruiser using 12 gauge loads from Federal, Hornady, and PMC. The Federal load was their Tactical 00 Buck. The PMC rounds were their reduced recoil 00 Buck.

Hornady currently has two special defensive rounds for the 12 gauge, both are 00 Buck. The "Reduced Recoil" load has a blue hull and is made for manual, pump guns. The Hornady red hull ammunition has a bit more "juice" and is designed to work not only in manual guns, but semi-autos as well.

Loading up the 500 Tactical, I performed some shooting drills, first firing rounds at a single target, then engaging multiple targets left to right and back again. I was not surprised to find that the pump gun cycled without flaw. The rubber recoil pad on the retractable stock proved comfortable enough and felt recoil was more than manageable.

The Federal load was standard velocity and provided the most "kick". The reduced-recoil Hornady and PMC rounds were akin to field loads as far as felt recoil was concerned. The "semi-auto" Hornady red shell, while a bit more stout than its reduced brother, was nonetheless easily controllable.

Shot patterns from the Tactical were what I would have expected from a cylinder bore. The Federal and PMC loads gave 5.5 and 6 inch wide pattern spreads at seven yards. The Hornady ammunition, which is deliberately manufactured for tight and consistent patterns, provided excellent results. From seven yards the blue shell put every pellet into a pattern so tight that the wad and shot struck together leaving one large, ragged hole. The pattern was about 2½ inches...awesome!

Regarding the Tactical Cruiser with its pistol grip, I feel a few words regarding proper shooting technique are warranted. Pistol grip shotguns certainly look menacing—like a giant handgun, and Hollywood loves to stick them in their "action" movies. However, I cannot think of one instance where the hero actually used the gun correctly. More

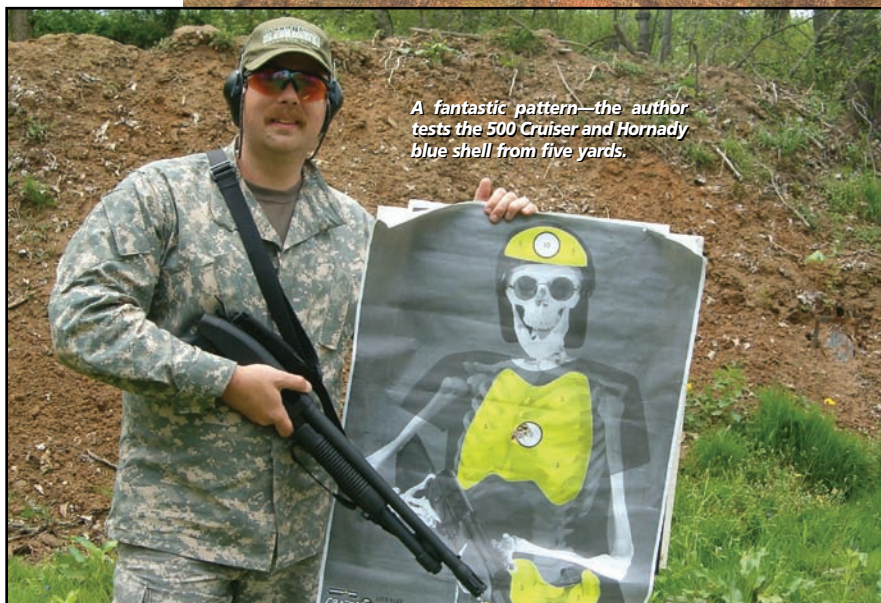

Ease of loading and unloading is a hallmark of the 500 series.

**"We're doing fine."

500 Tactical Cruiser and the ammunition tested.

A fantastic pattern—the author tests the 500 Cruiser and Hornady blue shell from five yards.

500 Tactical Cruiser's pistol grip stock for maximum ease of motion in tight quarters.

The 500 Tactical is available in a blued finished version in addition to the Marinecote model tested.

often than not, they hold the guns at waist level, blasting away bad guys at great distances without missing a shot.

To truly get the most from your pistol grip shotgun and be assured of solid hits, there are two preferred ways to hold the gun. First, you can bring the gun up to the centerline of your torso, holding your shooting arm tightly against your chest.

This puts the pistol grip in the middle of your body. The muzzle will be below your line of sight but still securely in your peripheral vision.

The second hold is more like shooting a pistol. Your non-firing hand, the one that works the pump action is thrust out toward the target. This pushes the shotgun forward and brings the barrel and the bead or dot sight up into clear view. The firing hand is now positioned out away from the body.

CLOSING THOUGHTS

For home defense, particularly during times of crisis; natural disasters, civil unrest, etc. the shotgun is a formidable choice. The gun is simple to operate, powerful enough to get the job done, and to potential predators an indicator of a serious defender.

After the disaster of Hurricane Katrina I was one of thousands of law enforcement officers who traveled to New Orleans to help restore order. While on patrol one afternoon, we were greeted by some homeowners. The folks flagged us down and thanked us for coming to help.

We inquired as to their situation and safety. "We're doing fine." One gentleman told us. "I have a generator, a gas grill, and this here to keep away the looters." He patted the blued steel pump shotgun hanging on his shoulder by a sling. I recognized the scattergun as a Mossberg 500. ■

Where The Professionals Train.

With its rock-solid reputation and decades of proven reliability, Mossberg has become the choice for the modern combat shotgun. Both in the United States and overseas, in hard-use environments such as Afghanistan and Iraq, front-line U.S. Army and U.S. Marine Corps units are relying on the 500 and 590 shotguns.

BY PAUL MARKEL & BRUCE CANFIELD

THE 500® & 590® PUMP-ACTIONS

MILITARY TESTED, COMBAT PROVEN.

“CRAP.” The roving sentry commented as he inadvertently chambered a round in the Remington shotgun he was attempting to clear. It was 0415 and the young Marine had just come off his second watch of the day. “Hold it, hand me the gun.” I said. I took the pump action shotgun from the young man, cycled the action and cleared it. I was the Corporal of the Guard and it was my responsibility to ensure the safe loading and unloading of firearms before and after guard shifts.

During my time with the United States Marine Corps I witnessed two major transitions in weaponry; the M1911A1 .45ACP pistol to the M9

9mm pistol, and the Remington 870 shotgun to the Mossberg 590® shotgun. While most regular infantry troops have only limited access and experience with either the pistol or shotgun, I was a member of the Security Forces Battalion and carried both firearms almost daily for more than two years.

My principle duty with the Security Forces was as a member of the Marine Detachment aboard the aircraft carrier U.S.S. Forrester. While every man had an assigned M16A2 rifle, our primary duty weapons were the pistol and pump action shotgun. All roving sentries and post standers were equipped with both the handgun and long gun.

The interior of a ship is naturally a rather confined space and the loading and unloading of firearms had to be carefully monitored. Anyone familiar with military service will remember the clearing barrel at the armory entrance. Our clearing barrel was essentially an eight-inch diameter pipe filled with sand.

My biggest beef with the old Remington guns was with the unloading procedure. On more than one occasion a weary sentry would pull back too far on the slide and drop a shell into the chamber. When we received our new Mossberg 590 shotguns I was pleased to see how simple it was to load and unload the magazine tube. With the shell elevator flush against the action there was no superfluous fumbling or

extraneous movement. While this might not seem like a big deal to the average user, when you are talking about a military weapon, the less complex the better.

The 590 and 500 model pump-action shotguns from Mossberg have a straightforward, uncomplicated design that makes them both affordable and easy to maintain. An old military saying goes something like this, "If you want to test the strength of a gun, give it to a Private. If it can be broken the Private will find a way to do it."

Mossberg's role as a supplier of firearms to the U.S. military is in fact nothing new. Prior to the early 1980s, Mossberg manufactured .22 rimfire bolt-action training rifles during the Second World War. In 1979, Mossberg was granted the first of a series of contracts for combat shotguns for the American military, with deliveries beginning in April, 1981. Since 1979, tens of thousands of Mossberg shotguns have been purchased by the U.S. Armed forces.

From 1981 to the present day, Mossberg has manufactured two basic models of its pump-action shotguns under government contract—the 500 and 590.

The 500

Introduced in 1961, the 500 pump-action shotgun utilizes an aluminum alloy receiver. The gun has a number of desirable features, including barrels that are fully interchangeable, an easily manipulated top-of-receiver-mounted safety, an anti-jam elevator, dual extractors, and twin action bars for smooth and reliable operation. Mossberg has produced the 500 in scores of different configurations for the civilian sporting market.

The 500 was introduced with wooden stocks and forends but these were eventually replaced by the more durable synthetic parts for the military and law enforcement versions. The reliability and relatively low cost made the 500 shotguns immediately popular with civilian buyers.

In the late 1970s, in order to replace aging Vietnam-era pump guns still in inventory—the government "MIL SPEC 3443" established the qualifications for a new combat shotgun.

"On May 30, 1979, (Mossberg) was awarded its first military contract for the Model 500 shotgun, adapting their 500ATP6 to the United States military Specification MIL-S-3443D. Milspecs require sample shotguns to pass an endurance test requiring 3,000 rounds to be fired with malfunctions not to exceed 0.1%, among other criteria.

Standard physical strength tests were measured, as well as performance under extreme temperature variance and response to chemicals and common liquids. The 500 MILS shotgun is used by the Departments of the Army, Navy, Marine Corps, Air Force and Coast Guard. Serial numbers begin at US-0001."

(excerpt from "Mossberg – More Gun for the Money")

The 590

Mossberg developed the 590 primarily for the law enforcement and potential military markets. Very similar to the 500, the 590 shares the same receiver and virtually all other features. The primary difference from the 500 is the configuration of the 590's magazine tube. This part can be easily opened for cleaning and is readily adaptable for the addition of an extended magazine tube. The Parkerized metal finish mates perfectly with other military small arms.

Mossberg offers the 590 with an optional bayonet lug and ventilated metal hand-guard, features that are obviously intended to appeal to potential military users. The bayonet lug for the 590 is compatible with the M7 and M9 bayonets used with the M16 rifle.

Reliability and relatively low cost are features that made Mossberg popular with the civilian market as well as attracting the attention of the U.S. military in the late 1970s. It was during this time that new combat shotguns were needed to replace the aging Vietnam-era pump guns still in inventory (see inset above for more on MIL SPEC 3443D).

For those who recognize the astronomical pressures and pounding a 12 gauge load inflicts on the components of a shotgun, as well as the other brutal testing criteria, this was a downright torture test. When all was said and done, the Mossberg 500 and 590 were the only shotguns that met or exceeded all the requirements—a testament to American-made reliability.

TECHNOLOGY
Get the Advantage

This fact, of course, goes back to our discussion of straightforward design and the guns' uncomplicated nature. The fewer moving parts, the fewer problems you will have in the long run. That, combined with quality workmanship and first-rate components translates to a tough, reliable, pump-action shotgun.

Despite the "military" features available on the 590 (extended magazine tube, bayonet lug and ventilated metal handguard), the initial government contracts, and most subsequent government contracts for Mossberg shotguns were for the 500 with 18" or 20" barrels and a 6-round total capacity (five in the magazine and one in the chamber).

There have been several variations over the years; however, the heart of the venerable Mossberg 500 system has remained unchanged. Most, but not all of the military contract Mossberg shotguns have aluminum trigger guards and safety buttons, while the civilian production (and some military) guns generally possess the same components made of a tough polymer compound.

Due to ship-board use, many of the Navy contract versions also have heavy-walled barrels and are fitted with sling swivels. The early military contract 500 shotguns were made with wood stocks and forends but by 1987, these were almost entirely replaced by synthetic stocks and forends, as was found on the 590's.

All four branches of the United States armed forces have purchased Mossberg shotguns since the early 1980s. Military procurement of the 590 variant was limited primarily to the U.S. Marine Corps and the weapon became popular soon after being introduced into USMC service.

As related in an article in *The Gun Digest Book of Assault Weapons*: "... In recent years, Marines have come to appreciate the value of a reliable shotgun for security purposes. Military and naval bases are seldom in isolated areas as once was true, and populations have grown up around them...This has made the shotgun the preferred security defense firearm at home and overseas. It is effective as a counter-threat weapon and less threatening beyond short ranges.

Most training officers are aware of the intimidation effect, which a man or woman in uniform and armed with a shotgun can command. The mere appearance of the gun or the sound of a round being racked into the chamber usually will give pause to those disturbing the peace or committing a crime. Good training and discipline go far toward effectively utilizing this deterrent value... At the Virginia training base, the new Mossberg has been found nearly 'Marine-proof.' Many of the guns have had more than 10,000 rounds fired through them, far exceeding the current military specifications for shotguns. The Model 590s have held up to the punishment."

The War on Terror

While the rifle has been the primary weapon of the soldier for the better part of two centuries, there have been several instances in the history of warfare where the shotgun has shined. Many years ago a Marine Vietnam veteran related his experience with the pump shotgun to me. The man stated that with all the noise of combat, rifles and machine-guns, grenades and rocket launchers, the shotgun had its own distinct sound. "When you heard a shotgun fire," he said, "you knew someone just got screwed up."

Today, our armed forces are once again in a situation where the merits of the shotgun have brought it back to the limelight. Rather than being assigned merely to guard duty or sentry work, the Mossberg 500 and 590 are going into the "hot zones."

An illustrative passage in the book, *Mossberg – More Gun for the Money*, reveals the durability of the M590 during Operation Desert Storm in the early 1990s: "...**Operation Desert Storm veterans have...practical tests to report—including firing the 590 without fear of malfunction after it had spent the night buried under sand. The 590s proved their worth after just shaking the sand out and very little cleaning. Definitely not the recommended maintenance for any mechanical equipment, and the kind of tribute that brings a wince to any armorer.**"

In addition to their obvious anti-personnel role, and as less-than-lethal platforms, pump guns are widely used as breaching tools. The U.S. Army and Marines recognized this benefit in the early days of the Middle Eastern conflict, and began retrofitting their guns with pistol grip stocks or pistol grips only.

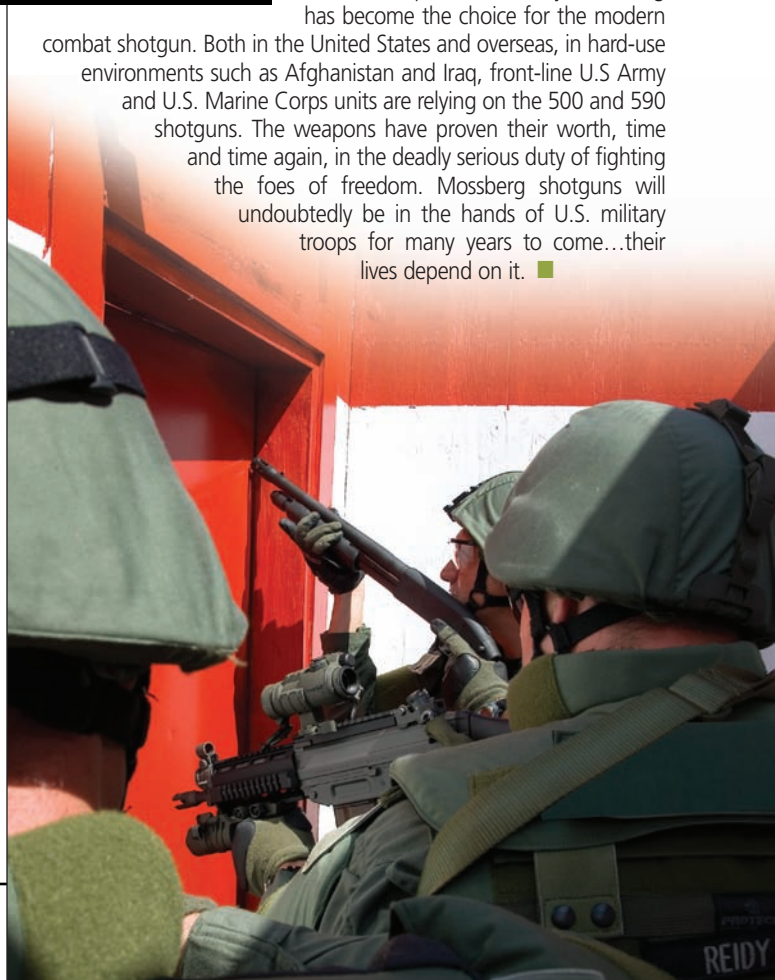

Seeing the need, Mossberg has stepped in with specially designed compact breaching guns. These pump guns include the most important feature a breaching gun needs—a stand off. The stand off is essentially an extra large muzzle brake with generous ports to safely vent off the gas from a breaching shell. Mossberg also offers the more compact 500 with either a pistol grip only or six-position retractable stock with spare shell holder.

With its rock-solid reputation and decades of proven reliability, Mossberg has become the choice for the modern combat shotgun. Both in the United States and overseas, in hard-use environments such as Afghanistan and Iraq, front-line U.S. Army and U.S. Marine Corps units are relying on the 500 and 590 shotguns. The weapons have proven their worth, time and time again, in the deadly serious duty of fighting the foes of freedom. Mossberg shotguns will undoubtedly be in the hands of U.S. military troops for many years to come...their lives depend on it. ■

Left, Founder Oscar F. Mossberg field tests the Model 35 Target Rifle (1932); below, Chairman of the Board Alan I. Mossberg and CEO A. Iver Mossberg discuss engineering specifications on the company's new 4x4 Rifle.

O N A RECENT TRIP TO

Mossberg's headquarters in North Haven, Connecticut, we stopped at security to get our visitor badges. It was early, but the parking lot had maybe a dozen cars in place. "What time does Mr. Mossberg usually get in?" we inquired. The guard smiled and nodded, "They're both here already."

By "both," he was referring to current Chief Executive Officer A. "Iver" Mossberg, Jr., and his father, Alan I. Mossberg, retired CEO and now Chairman of the Board. That the current leadership would be in the office and at the controls this early was not surprising, considering the company's almost century-long tradition of having a Mossberg at the corporate helm. And while the company's production processes and technology are ever-advancing at 21st century pace, America's oldest family-owned firearms company continues to make good its pledge to deliver to the consumer "More Gun for the Money."

A LOOK AT THE STORIED HISTORY OF MOSSBERG FROM THE EDITORS OF 'MORE GUN FOR THE MONEY'

By Victor and Cheryl Hawlin

From humble beginnings...

O.F. Mossberg & Sons began in March of 1919 in a rented loft on State Street in New Haven, Connecticut. Founder Oscar Mossberg and his sons Iver and Harold, demonstrated a proven talent for innovative design and mechanical expertise that would spawn four generations of manufacturing quality sporting firearms at affordable prices.

The BROWNIE pistol was the new firm's first firearm. A .22 caliber, four-shot "pocket pistol," the Brownie's appealing lines and popular price of just \$6 led to a production of over 32,000 pistols in its 13-year run.

Growing quickly, the tiny firm brought to market a succession of over two dozen firearms, developing and improving a generation of bolt action rifles and shotguns in the \$5-\$15 range. By the late 1930s, when other firms were struggling with the economic realities of the Great Depression, Mossberg boasted sales of more than one million firearms and scopes, and employed more than 300 workers.

Yet OFM never lost the kind of family environment normally associated with smaller companies; they hosted annual Christmas parties for the workers and family members, theatre and shopping trips to NYC, and even company-sponsored softball and rifle teams. As it remains

The Old and the New: (above) the .22cal. Brownie, Mossberg's first firearm; and (below) the 4x4 Rifle—the company's newest sensation.

today, this was a firm where top management knew everyone on a first-name basis.

Mossberg began its relationship with the US military in 1940 with government contracts for close tolerance tooling gauges, .50 caliber machine gun parts, and sub-contracts for the British Lee-Enfield rifles.

Mossberg also produced the 42MB training rifle, destined for British troops under the Lend-Lease agreement, and the 44US target trainer, produced for U.S. Army and Navy forces.

Post-war models sought to build on the success of the "GI" rifles, and a series of industry "firsts" such as grooved receivers, hinged peep sights, and thumb-operated safeties brought the Mossberg name into millions of American households whose members can fondly say, "My first gun was a Mossberg."

...to modern times...

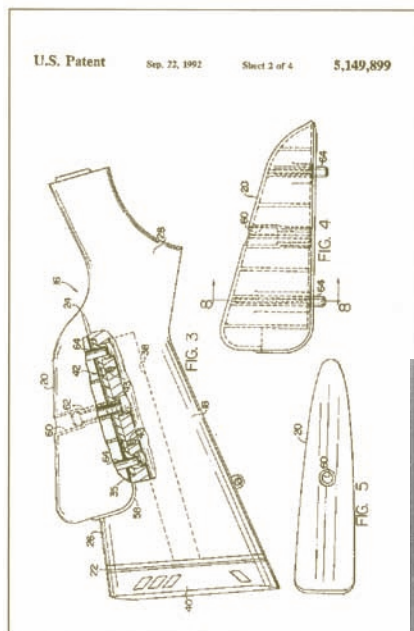

The year 1962 was a benchmark for Mossberg. The 500® model pump shotgun was introduced, and in the last 40 years grew to be the most successful firearm in the company's history.

Mossberg's dominance of the world of pump-action shotguns began with the 500®. Over the years, Mossberg added a dazzling array of barrel and stock configurations, developed the first-ever shotgun chambered for the then-new 3½" 12 gauge magnum shot shell, and secured and expanded a growing line of US military and law enforcement contracts.

Since 1979 Mossberg's military 500® and 590® models have been the only pump-action shotguns ever to pass all US Military Mil-Spec 3443 requirements — the heart of which is full interchangeability of parts in the field, and a 3000-round endurance test using buck shot loads.

Mossberg sales reps and jobbers meet at the factory to discuss the 1939 line.

(Left) "Patent drawings for Mossberg's Dual-Comb stock. In the first 88 years the company has accumulated over 100 patents for various products. (Below) A pamphlet for the 200 pump-action shotgun circa 1964.

Mossberg's Senior Vice President and General Counsel, Joseph Bartozzi, adds, "As it was in WWII, we have a good relationship with the military. Back in the early 90's, US Navy engineers came to us with a request to modify some of our features on the 590. They wanted a 6-shot model with a clean-out tube, heavy-walled barrel, and an aluminum trigger group and safety. The result was the 590A1, representing the largest-ever military contract for a Mossberg firearm in modern history."

What that means for military and law enforcement is a reliable and rugged performer in the field, shaped by feedback from soldiers and officers whose lives depend on it. What that means for the consumer is the credibility of rock solid design and a new array of features that serve both home security and sporting arms. Bartozzi adds, "Our adjustable tactical stock in black finish fits the shorter-statured police officer and those outfitted in protective body armor. Now give it a sporting camo finish, and the turkey hunter wearing heavy clothing under adverse weather conditions will find it the perfect solution for fit and comfort control — and that translates to hitting your target."

...and beyond.

In just the last few years, Mossberg has launched the most extensive new product line in history — including two new autoloaders, a line of long- and short-action centerfire rifles, a new all-terrain pump shotgun and two shotgun models designed for the smaller-framed shooter. They added two new rimfires and an impressive over-and-under from their international division.

Mossberg's newfound diversity covers the world of sporting clays, big game, upland game, waterfowl, and turkey hunting, plus competition shotgunning for both the beginning and experienced shooter alike. This comes at a time when many established firearms makers have either

closed their doors, been bought out by corporate mergers, or have been forced to drop long-standing signature models from their lines.

Just as it did in the Great Depression, Mossberg is thriving and prospering against a backdrop of volatility that is seeing radical changes in the industry.

Iver Mossberg explains, "Being family owned, we have the flexibility to move on a dime to react and take advantage of opportunities in the market. We don't have the red tape that could bog down other companies. We get direct feedback from our consumers, sales reps and core management team, and information does not get lost as it travels through the system."

Alan Mossberg adds, "We have the same challenges that my grandfather, father and uncle faced over the years. It's a question of balance, really. On the one hand, reducing risks so that we can stay competitive and maintain profitability. On the other hand, you have to take risks so that you can grow, develop new products and serve new markets. "The key," he nods, "is knowing which risks to take and which to eliminate."

How does Mossberg achieve greater dominance with the new line? "By doing what we always have done," Bartozzi says, "and by listening to the customer. New options. New features. But the ultimate reason that your product will sell — is quality." Bartozzi concludes, "Good lines that are robust, rugged and reliable at an excellent price is now and has always been Mossberg's recipe for success."

The Mossberg story is an American story of how the past shapes the present and the future. The Mossberg family name is on the door handles at the factory. The Mossbergs are in the plant everyday, surrounded by a core management team with a "hands-on" feel and experience as designers, engineers, hunters and avid sportsmen. This is Mossberg's "extended family," and they never forget that the aesthetics of a good product are as much art as they are science. Iver Mossberg reflects upon four generations of his family's legacy: "At Mossberg, it's about gaining and keeping customers for life. We succeed when our customer says, "My first gun was a Mossberg, my current gun is a Mossberg, and my next gun will be a Mossberg." ■

THE IMPORTANCE OF

SAFE FIREARMS STORAGE

BY JOSEPH BARTOZZI, ESQ.
AND THE NSSF STAFF

Firearms ownership offers the wonderful opportunity to enjoy hunting and recreational shooting. The purchase of a firearm also brings the all-important responsibility of safe storage and handling.

The National Shooting Sports Foundation (NSSF), the trade association for the hunting, shooting sports and firearms industry, is dedicated to reaffirming and strengthening its members' commitment to the safe and responsible use of their products. To fulfill that mission, NSSF, of which O.F. Mossberg & Sons, is a member, has reached out not only to the industry, but also to you, the consumer, to help assure responsible firearms ownership.

The contributions to safe firearm storage and safety made by both Mossberg and the NSSF have been considerable. The use and distribution of a cablelock, for example, was conceived in the mid-1980's by Alan Mossberg, not just to lock shotguns, but to lock a wide variety of makes, models, and action types.

Proper engagement of a cablelock onto a firearm renders it inoperable because it creates a physical block between the breech face and the chamber.

Since October of 1989, all firearms shipped by O. F. Mossberg & Sons have included a free cablelock or trigger lock. Most other firearm manufacturers have since followed Mossberg's lead and are furnishing similar devices with their firearms. Not only has Mossberg been furnishing free cablelocks with every one of its guns, but over the past 17 years the company has worked with many organizations and municipalities to distribute hundreds of thousands of cablelocks to individuals, whether they were Mossberg customers or not.

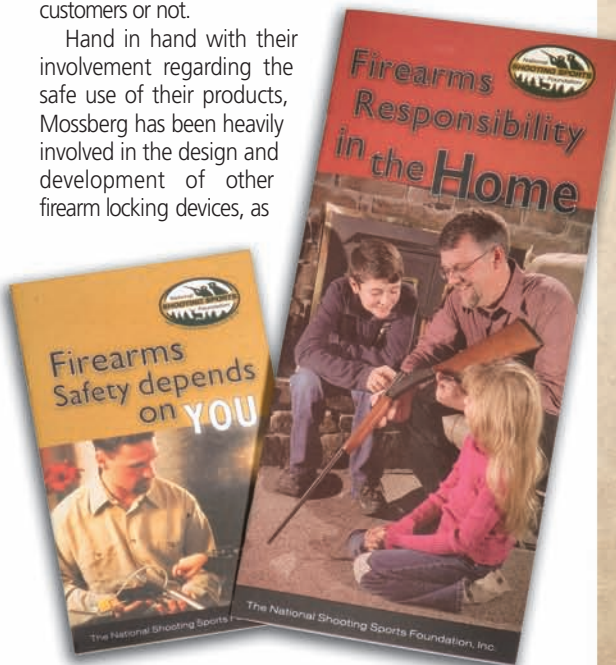

Hand in hand with their involvement regarding the safe use of their products, Mossberg has been heavily involved in the design and development of other firearm locking devices, as

(Top) The Mossberg Loc-Box: This unique, two-piece firearm locking device helps prevent unwanted access to firearms by children and other unauthorized users. (Above and left) Each and every firearm that leaves the Mossberg factory includes a Cable or Trigger lock, an Owner's Manual, and the NSSF pocket-sized pamphlets "Resource Guide" and "Firearm Safety Depends on You."

well as the sophisticated test fixtures used to assess their effectiveness. The company has been directly involved with the California Department of Justice, as well as the American Society for Testing and Materials (ASTM), to assist in the development of test and performance criteria and leading to the publication of an international standard for firearm locking devices. Moreover, Mossberg has offered its facilities and their own considerable expertise to other manufacturers.

In 2000, Mossberg launched its patented Loc-Box™ gun storage system (see photo above). Its unique design prevents a firearm from being stored with a round in the chamber—while at the same time allowing for robust security and ready access. This is just another example of how Mossberg has been working hand in hand with the shooting public and the NSSF to promote firearms safety.

Summing up his company's involvement with these important safety issues, Mossberg's Joseph Bartozzi states: "We are committed to providing a means to assist our customers and others with safe firearms storage. We firmly believe that our locking devices, along with the safety information found in our owner's manuals, catalogs, advertisements and on our website—along with our continuing financial support of hunter and shooter education and NSSF programs—contribute in a positive way to reducing firearms-related accidents."

The NSSF itself has initiated many safety-related programs. In 2003, for example, it launched a partnership with the Department of Justice and "Project Safe Neighborhoods" to implement the Nation's largest firearm safety program. Called "Project ChildSafe," the program features the nationwide distribution of safety kits that include a cable-style gun locking device, and safety education materials to instruct gun owners how to properly store firearms. By the end of 2006 more than 35 million *Project ChildSafe* safety kits will have been distributed to gun owners in all fifty states.

In 2005 the NSSF joined with the Department of Justice, Project Safe Neighborhoods, and the Bureau of Alcohol, Tobacco, Firearms & Explosives (BATFE) to help keep firearms out of the hands of criminals by preventing straw purchases. The "Don't Lie For the Other Guy" program seeks to help retailers identify straw purchases before they occur, and also warns consumers about the stiff penalties for involvement in a straw purchase. "Purchase a firearm for someone who can't, and buy yourself 10 years in jail," is the slogan.

The NSSF "Resource Guide" includes the Foundation's long list of

educational materials, as well as its programs and web sites. Among those materials are brochures, booklets, DVDs, videotapes, and more. They deliver many messages, but none as important as the 10 commandments of gun safety described in the shirt-pocket-size guide, "Firearm Safety Depends on You." "Firearms Responsibility in the Home," another NSSF booklet, offers rules for safe storage of sporting firearms, as well as important information on firearms kept for home security. Both booklets can be found in each and every firearm box shipped from the Mossberg factory, along with a firearm locking device and owner's manual. Yes, owning a firearm is a serious responsibility, but the recreational options available through responsible ownership offer incredible pastime, sport, and the opportunity to experience America's shooting and hunting heritage.

Whether you choose to shoot at stationery targets with a rifle or handgun at a range, break clay targets in trap, skeet, sporting clays or other shotgunning pursuits, or attempt to hunt the wide variety of the nation's thriving game, Mossberg and the NSSF encourage the same responsible approach to firearm safety.

To help you find convenient ranges, no matter where you live, or hunting preserves, where exciting wingshooting opportunities abound, visit both the Mossberg and NSSF web sites, including:

- Mossberg.com offers an array of safety and safe firearms handling information as well as information on firearm locking devices, planning a hunt, and other hunting and shooting related insight.
- Wheretoshoot.org will lead you to a range.
- Wingshootingusa.org will help you find a convenient preserve.
- Huntandshoot.org opens up an entire world of hunting and shooting opportunities.
- NSSF.org will take you to all of NSSF's many offerings.

So, congratulations again on owning a firearm. Responsibly exercise that ownership—and you'll be rewarded with an remarkable array of shooting opportunities. ■

930™ Waterfowl

12 Gauge, American Black Walnut Stock, 28" Ported Barrel, Item #85115

930™ Waterfowl

12 Gauge, Advantage® Max-4™, 28" Ported Barrel, Item #85228

- **Versatile**— Developed for use with 12 gauge 2³/₄" and 3" factory loaded shotshells... from low-brass 1oz. target loads to non-toxic magnum rounds;
- **Gas system**— Dual gas-vent system vents excess gases to aid in recoil reduction and eliminate stress on operating components;
- **Drilled & Tapped**— All 930™ models feature a drilled and tapped receiver, factory-ready for scope base and optics installation;
- **Sighting options**— Select models are offered in a range of standard front bead, fiber optic, traditional rifle-type and integral scope base models;
- **Choke tubes**— Interchangeable Accu-Choke™ tube set and wrench (Improved Cylinder, Modified, Full) are included with all waterfowl and field models;
- **Uni-Line stock and receiver**— Soft, angled edge of receiver marries with the stock perfectly, providing instinctive eye/rib alignment for instant target acquisition;
- **Quick-Empty Magazine Button**— Easy-to-operate quick-empty magazine button releases contents of the magazine for quick, convenient unloading;
- **Turkey features**— XX-Full extended choke and fully adjustable front and rear fiber optic sights offered on select turkey models;
- **Every 930™ Autoloader** comes factory assembled and includes a free gun lock and 2-year limited warranty.

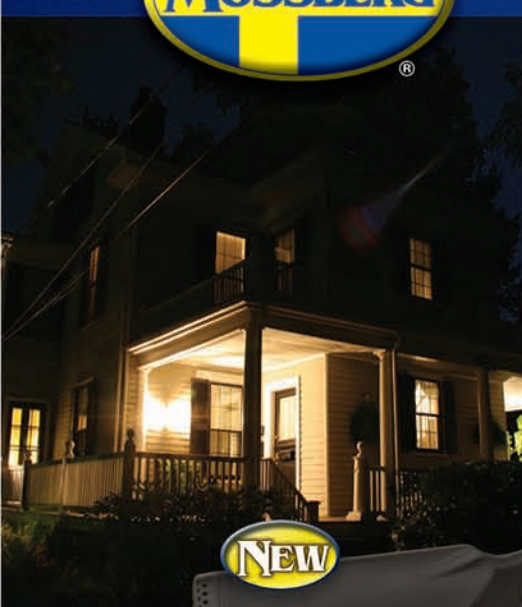

NEVER USE ALCOHOL OR DRUGS BEFORE OR WHILE SHOOTING.

- **Scoped combos**— 802 Plinkster™ bolt-action models are offered in factory-mounted 4X scoped combo sets;
- **Accuracy**— 18" & 21" barrels are free-floating for superior accuracy in changing weather conditions;
- **Synthetic Stocks**— rugged, all-weather synthetic stocks are standard on all 802 and 817 models;
- **Barrel Finishes**— Models are available in both blue and brushed chrome finishes;
- **Scope Ready**— All 802 Plinkster™ models feature a grooved receiver, compatible with 3/8" scope mounts; 817 models come with factory mounted, Weaver-style scope bases for quick ring and optics attachment;
- **Easy operation**— conveniently located cross bolt safety and magazine release button;
- **Detachable magazine**— a 5-round capacity (817 models) and 10-round capacity (802 models) magazine is included with each rifle;
- **Trouble-free cleaning**— assembly/disassembly is easy for trouble-free cleaning and maintenance;
- **Every 802 Plinkster and 817** includes a free gun lock and 1-year limited warranty.

Reserve Series™

9 OVER-AND-UNDER SHOTGUN CONFIGURATIONS TO MEET YOUR HUNTING AND SHOOTING NEEDS

NEW

NEW COMBO

- **New Bantam model**— 20 ga. Silver Reserve Bantam model features a shortened walnut buttstock and recoil reducing buttpad;
- **Field models**— offered in 12, 20, 28 gauge and .410 bore models, featuring rich scroll work and gold engraved game scenes;
- **Sporting models**— Silver Reserve™ and Onyx Reserve™ Sporting models feature rich scroll work, a special extra-wide 10mm rib, ported barrels, and a 1/4" longer LOP for enhanced fit on the range;
- **Turkish walnut**— elegant yet functional, every model features a hand-checked Turkish black walnut stock and forearm, cut with classic lines for optimum handling performance;
- **Dual locking lugs**— robust lugs provide strong, secure lock-up of barrels to the receiver for maximum reliability and longevity;
- **Selective trigger**— single selective trigger features a crisp trigger pull and is protected via a spacious trigger guard with sweeping edges for use with gloved fingers;
- **Safety and barrel selector**— Each model is equipped with an ambidextrous thumb-operated safety and integrated barrel selector, located on the top tang for convenient, easy-to-see operation;
- **Chrome-plated chambers and bores**— all models feature chrome-plated chambers and bores, maximizing corrosion resistance, and at the same time minimizing shot/wad friction while traveling the length of the bore;
- **Every Reserve Series™** Over-and-Under includes a free gun lock and 1-year limited warranty.

Silver Reserve™ Field

.410 Bore, 26" Barrels, Black Walnut Stock, Game Scene Engraving, Item #75416

Silver Reserve™ Field

28 Gauge, 26" Barrels, Black Walnut Stock, Game Scene Engraving, Item #75413

Silver Reserve™ Bantam™ Field

20 Gauge, 26" Barrels, Black Walnut Stock, Game Scene Engraving, Item #75433

Silver Reserve™ Field—20/28 Combo

20 and 28 Gauge, 26" Barrels, Black Walnut Stock, Game Scene Engraving, Item #75254

NEW COMBO

Silver Reserve™ Field—12/20 Combo

12 and 20 Gauge, 28" and 26" Barrels, Black Walnut Stock, Game Scene Engraving, Item #75253

Silver Reserve™ Sporting

12 Gauge, 28" Ported Barrels, Black Walnut Stock, Scroll Engraving, Item #75418

Onyx Reserve™ Sporting

12 Gauge, 28" Ported Barrels, Black Walnut Stock, Scroll Engraving, Item #75431

ALWAYS USE THE PROPER AMMUNITION FOR YOUR FIREARM.

Maverick® Pump-Actions

6 PUMP-ACTION SHOTGUN CONFIGURATIONS TO MEET YOUR SHOOTING AND HUNTING NEEDS

Maverick® 88™ Security – 6 Shot

12 Gauge, 18.5" Barrel, Blued Finish, Black Synthetic Stock, Cylinder Bore, Item #31023

Maverick® 88™ Security – 8 Shot

12 Gauge, 20" Barrel, Blued Finish, Black Synthetic Stock, Cylinder Bore, Item #31046

Maverick® 88™ All-Purpose

20 Gauge, 26" Barrel, Blued Finish, Black Synthetic Stock, Item #32200

Maverick® 88™ All-Purpose

12 Gauge, 28" Barrel, Blued Finish, Black Synthetic Stock, Item #31010

Maverick® 88™ Slug

12 Gauge, 24" Barrel, Cylinder Bore, Blued Finish, Black Synthetic Stock, Item #31017

Maverick® 88™ Slugster®

12 Gauge, 24" Slugster® Barrel, Fully Rifled Bore, Blued Finish, Black Synthetic Stock, Item #31044

- **Versatility**—Maverick shotguns are developed for use with 12 and 20 Gauge 2¾" and 3" factory-loaded ammunition;
- **Quality queues**—a combination of dual extractors, twin action bars, positive steel-to-steel lock-up, and an anti-jam elevator combine for reliable, smooth operation;
- **Trouble-free maintenance**—easy to maintain design requires only the removal of one pin to field strip, with no special tools required;

2007 BUYER'S GUIDE

Official Mossberg® Licensed Products

For nearly a century, the Mossberg brand has been synonymous with providing first-time and experienced shooters alike with safe and reliable firearms—at a price few others have been able to match. Now, we've expanded the Mossberg tradition of "more gun for the money" by offering the latest in high-quality, outdoor products. Under license from Mossberg, you'll find a growing number of hunting, shooting and outdoor products—scrutinized by us, endorsed with the Mossberg brand, and offered by sporting goods dealers across the country. Check them out at your local retailer or visit our website for a current list of licensed products. A few examples of what you'll find...

CUTLERY & FLASHLIGHTS

Based on designs by Meyerco, you'll find quality cutlery for hunting and personal use along with a selection of tactical-style flashlights. For more information on retail locations, call **214.467.8949**

OUTDOOR SEASONING

A unique selection of special spices and seasonings. Developed by Game Chef, with the outdoorsman and wild game grilling in mind. For more information on retail locations, call **361.883.0222**

EYE PROTECTON

Stylish, protective safety glasses developed by Pyramex, for hunting and shooting applications. Available in a wide variety of styles and colors. For more information on retail locations, call **800.736.8673**

MOSSY OAK
BRAND CAMO

**WHEN THEY TALK ABOUT MIGHTY OAKS GROWING
FROM ACORNS,** *we have a pretty good idea what they mean.*

Growing a business from little more than dirt and leaves can teach you a lot of lessons about nurturing things. Not to mention give you a good excuse for going around with a little dirt under your fingernails. So it's not surprising you'll find us gathering acorns from around the world and caring for them here in the Mississippi woods. At Mossy Oak we've always tried to be aware of the tremendous debt we owe nature. We also, quite frankly, view clean fingernails as a character flaw.
