THE LEADER IN RIMFIRE AMMUNITION®
2008

Tech. Services: 1-866-286-7436 • General Information: 1-800-627-3640 • cci-ammunition.com

Printed in the U.S.A. © 2007 CCI

WELCOME TO CCI® THE LEADER IN RIMFIRE AMMUNITION®

CCI® understands that it takes a lot of hard work, dedication and continued new product innovation to stay at the top of the game. We're proud to bring rimfire shooters the best option available, no matter the shooting style. CCI is known for having outstanding bullets that deliver time after time. We have also developed several target loads that continue to perform at the highest level.

Maintaining a complete line of loads for the rimfire enthusiast means keeping up with what's new and leading the way in new product development. For 2008, CCI brings a few new and exciting loads. Headlining this year's new offerings is TNT Green™, the latest in non-tox bullet technology. This lead-free bullet is a great addition to CCI's extensive rimfire lineup and boasts explosive performance

and unprecedented accuracy. TNT Green's combination of accuracy and explosive performance leads it to out perform many of today's conventional bullets.

CCI has also added two Segmented Hollow-Point offerings. In 2008 there will be a 40-gr 22 Win Mag and a 40-gr 22 LR sub-sonic option. The uniquely designed bullet divides on impact, sending three separate segments of the bullet in different directions, each part creating a devastating wound channel. And as always, we continue to offer a complete lineup of primers. Thanks for making CCI The Leader in Rimfire Ammunition®. We hope you enjoy a safe, successful and happy year of shooting.

The CCI PRIMER Collection	12-13

New!
FOR 2008

CCI® *Varmint*

When you're after varmints, the more explosive the performance, the better. When you put the crosshairs on your target and pull the trigger, it should go down and stay down. CCI's varmint lineup offers several loads in a variety of calibers that utilize unique bullet technologies to deliver what we covet most: devastating performance on varmints, time after time.

Our latest product development is TNT Green™. The initial 22 Mag offering gives varminters explosive performance and unprecedented accuracy. This unique combination is delivered in a completely lead-

free bullet and utilizes the most advanced non-tox bullet technology available. Our bullet design features a pressed-powder core that stores energy—only to be violently released on impact. And as a result, we get unbelievably explosive expansion. There are also other impressive rimfire loads like the 17 HMR V-Max. This black-tipped bullet is driven to super-fast velocities in 17 HMR and 17 Mach 2. These high velocities translate to accurate, flat-shooting loads great for a variety of vermin. And don't forget about our two new Segmented Hollow Point options. If you can't find your ideal rimfire varmint load on these pages, it doesn't exist.

V-MAX®

- Flat-shooting
- Accurate
- Explosive expansion

STINGER®

- Hypervelocity leader
- Loaded within industry standard pressures
- Anchors varmints fast

TNT®

- Explosive on impact
- Minimal mid-range rise
- Nearly identical point of aim to V-Max® in 17 HMR

New! TNT GREEN™

- Lead-free
- Impressive terminal effect
- Match-grade accuracy

MAXI-MAG®

- Clean-burning propellants
- Maximum velocities
- Utilizes sure-fire priming technology

MINI-MAG®

- Original CCI® offering, still the most popular
- Reliable feeding
- Clean-burning powder won't foul barrel

HOLLOW-POINT

- A CCI® original
- Great stopping power
- Reliable expansion

New! SEGMENTED HOLLOW-POINT

- Impressive terminal effect
- Bullet breaks into three-parts on impact
- Each segment creates its own wound channel

CCI® *Small Game*

Small game hunters want a bullet with great terminal effects and impressive stopping power that won't destroy the meat or pelt. CCI® offers these desired qualities in a variety of caliber and bullet options. One such offering is the GamePoint® bullet. Available in both 17 HMR and 22 Win Mag, it gives shooters big game bullet performance. This bullet doesn't fragment and gets deep penetration. Most importantly,

meat and hide damage are minimal. Another unique bullet option from CCI is the Small Game Bullet. The SGB provides more stopping power than round nose bullets, with less meat spoilage than hollow points. Choosing the right ammunition means meat in the pot. And if you use these options from CCI, we hope you have the vegetables ready.

SMALL GAME

CARTRIDGE/PRODUCT	PART NO.	CALIBER	BULLET STYLE	WT. (GRS.)	MUZZLE
17 HMR	0055	17 HMR	FMJ	20	2375

SUB-SONIC HP	0056	22 LONG RIFLE	LHP	40	1050

GAMEPOINT®

- "Dimple-Tip" expands like big game bullet
- Minimal meat and hide damage
- Accurate, powerful

FMJ

- Punches clean holes
- Ideal "open area" bullet
- Very accurate

SGB

- Great stopping power
- Flat nose creates large wound channel
- Less meat spoilage

SUB-SONIC

- Low noise
- Bullet expands without fragmenting
- Great performance on small game

VELOCITOR® HP

- Excellent weight retention
- Impressive downrange energy
- Deep penetration

CCI® *Competition/Target and Plinking*

Competition is our society's way of seeing who has what it takes. When you're competing, "decent groups" just won't do. That's why we offer a full line of ammunition designed for those in competition. Whether you're shooting rifle or pistol, we have a high-performance load for you. We even offer a 22 Short target load especially for International Rapid Fire Pistol Competition.

CCI® also understands there is a time when you just want to do a little plinking. When doing some relaxed shooting on the range, consistency and reliability are a must. Having affordable options that perform with the same ballistics as high-grade competition loads is also a plus. CCI's target/plinking collection provides loads that are great for heading out to the range for a little practice.

22 SHORT

- High Velocity
- Copper-plated for clean bores
- Great accuracy, performance

MAXI-MAG® TMJ®

- Consistent performance for plinking
- Utilizes sure-fire priming technology
- Jacket seamlessly encases lead core for accuracy

22 LONG

- A CCI® exclusive
- Only classic 22 long
- Very reliable

- Same velocity as Green Tag®
- Consistent performance

SELECT™

- Outstanding performance in semi-automatics
- Impressive consistency
- Optimal velocity for accuracy

SHORT TARGET

- Accurate and reliable to meet competition demands
- Specialized for IRF pistol competition
- Positive functioning without big recoil

CCI® Pest Control/Specialty

Pests can be hard-to-hit problems, even at close range. For situations like this, CCI® offers rimfire, as well as centerfire pistol, shotshell options. These rounds provide increased effectiveness over single projectile loads. For rimfire enthusiasts, CCI has optimized 22 LR and 22 WMR options.

CCI also offers a few “specialty” loads for very specific applications. By carrying these loads, CCI demonstrates its ability to cater to a broad range of shooters. For the times when pest control requires a heavier projectile or a longer range than our rimfire shotshells, use our 22 Short CB load. It means less noise and great accuracy for smaller targets.

RIMFIRE SHOTSHELL

- Consistent patterns
- Easier hits on pests
- Only 22 WMR shotshell load on the market

CB

- More effective at longer ranges on pests
- Accurate
- Great plinking loads

CENTERFIRE PISTOL SHOTSHELL

- Great for close-range pest control
- Packed in reusable boxes of ten shotshells
- Available in a variety of calibers

NOISE BLANKS

- Great for training
- Clean-burning propellant
- Work in any firearm chambered for 22 Short, Long or Long Rifle

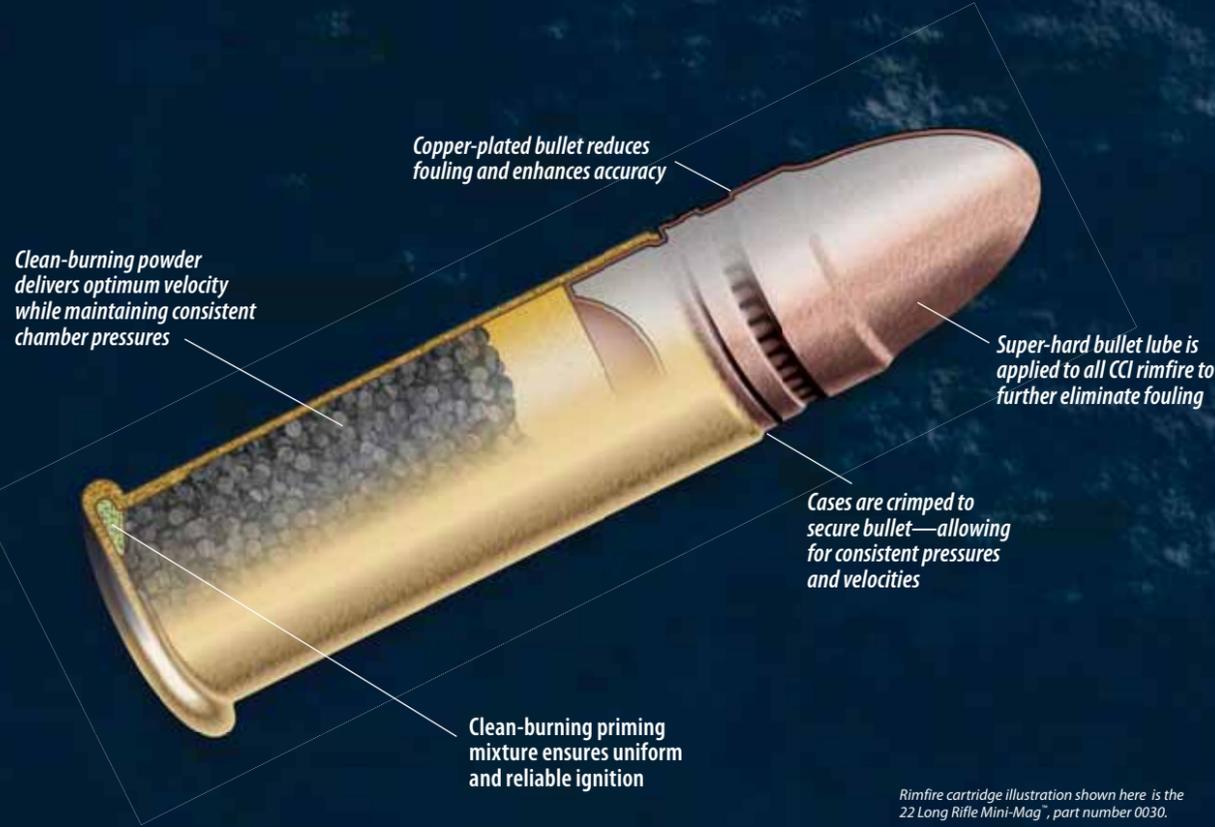

WRF HOLLOW POINT

- 19th Century favorite with 21st Century technology
- Only 22 WRF in the industry
- Copper composition and special base make it ideal for old barrels

CCI® Rimfire Construction

Rimfire cartridge illustration shown here is the 22 Long Rifle Mini-Mag™, part number 0030.

CCI RIMFIRE TIPS FOR SUCCESS

- **Safety first when shooting!** Always wear eye and ear protection. Rimfire bullets can travel up to two miles. Treat every rimfire firearm with the same respect you afford your most powerful rifle or handgun.
- **Match your ammunition to the sport.** Choose solid lead or TMJ® bullets for edible game, hollow points for varmints and lead round nose for competition shoots. See the rimfire reference table for usage recommendations.
- **Sight in most hunting rifles for 50 yards.** The bullet rise between the muzzle and 50 yards is very small, so you can use the same sight picture over that range. For open-country varmint shooting, consider a 75 yard sight-in for 22 Long Rifle, and a 100 yard sight-in for the Magnum rimfires.
- **Clean that gun!** Most rimfire malfunctions can be traced to poor gun maintenance. When you clean the bore, also clean the action. Excess residue or lubricant in the action can cause misfires and feeding problems.
- **Gun condition is everything!** There are many poor quality or badly worn 22 rimfire firearms in circulation that should have been rebuilt or retired years ago. Shooting them with ANY ammunition could be hazardous. When in doubt, consult the firearm's manufacturer or a competent gunsmith.
- **Revolvers have barrel/cylinder gaps.** The industry MAXIMUM permissible gap is a mere 0.012 inch—that's just three sheets of standard copier paper. A gap larger than this can mean a bullet fails to leave the barrel, resulting in a hazardous barrel obstruction. Revolvers with oversized gaps must not be fired with ANY ammunition until repaired.
- **Try different types of ammunition when looking for accuracy.** There are many makes of rimfire firearms with a wide variety of rifling patterns. That makes them very sensitive to the ammunition type. CCI® has plenty of choices to help you in that quest.
- **Take care of your ammunition.** Store away from moisture, heat, and oils. Keep ammunition in the original boxes. CCI's innovative plastic box protects ammunition better than the cardboard boxes other companies use.

CCI® Primers

Reloaders don't have to look any further than CCI® for their primer needs. With a complete line, we've really got something for everyone. The mainstays of reloading, our Standard Rifle and Pistol Primers are remarkably reliable and clean-burning. This means primer pockets stay cleaner and there's no question of performance. If you're trying to wring the last bit of accuracy from your target loads, be sure to use

our Bench Rest Rifle Primers. They are assembled with extra care so each primer fires exactly like the one before. CCI also offers in-line muzzleloading and shotshell primers, as well as primers in APS® strips. CCI even carries percussion caps featuring modern, non-corrosive, non-mercuric priming.

CCI® PRIMERS

PRIMERS

209 IN-LINE MUZZLELOADING PRIMERS

- Optimized for muzzleloading
- Reduce fouling
- Formulated to ignite in humid conditions

BENCH REST RIFLE PRIMERS

- Precision ignition for tough competition
- Assembled with extra-care for consistency
- Ultimate in accuracy

PRIMERS IN APS STRIPS

- Available for most popular primers
- Speeds up reloading process
- Offers protection for primers

STANDARD RIFLE AND PISTOL PRIMERS

- Clean-burning
- Meet majority of reloading needs
- Unprecedented reliability

MAGNUM RIFLE/PISTOL PRIMERS

- Provide extra heat and ignition power
- 20% hotter flame to light propellants in toughest hunting conditions
- No loss in sensitivity

PERCUSSION CAPS

- Non-corrosive, non-mercuric priming compounds
- Choice of styles
- Assembled with soft, ribbed copper cups

SHOTSHELL PRIMERS

- 209 is designed for standard field and target loads
- Reliable, clean-burning
- Fit all modern shotshell cases with 209 primer pocket
