A Message from the CEO

I

speak for all of us at Mossberg when I say we greet 2008 with great enthusiasm and optimism. As America's oldest family-owned firearms manufacturer, the Mossberg traditions of innovation, versatility, and value are alive and well, as illustrated by several exciting new product introductions this coming year.

In keeping with our reputation for innovation, we've developed the all-new 464 Lever-Action Rifle — incorporating the looks, balance and mechanics of a traditional lever action, combined with modern design features that put it in a class by itself. Following on the heels of multiple new bolt-action, semiautomatic, pump, and over-and-under shotgun and rifle introductions over the last several years, the 464 is indicative of how we at Mossberg are growing and diversifying our product lines like no other.

The one thing that never changes, however, is our commitment to bring to you, America's hunters and shooters, the best-designed, most reliable firearms at prices that represent 'more gun for the money.' Just as important, Mossberg also plays a significant role in the preservation of the great hunting and shooting heritage many often take for granted. In 2006 alone, excise taxes paid by manufacturers of firearms and ammunition accounted for over \$250 million. Proceeds from these taxes are used to help restore habitat and acquire land for the benefit of wildlife — game and non-game species alike. And you, the American sportsman, generated an economic impact of nearly \$3 billion in hunting related activities. In fact, license fees alone represent the largest portion of the sportsman's contributions to the state fish and game departments, presently furnishing them with more than \$1.1 billion annually.

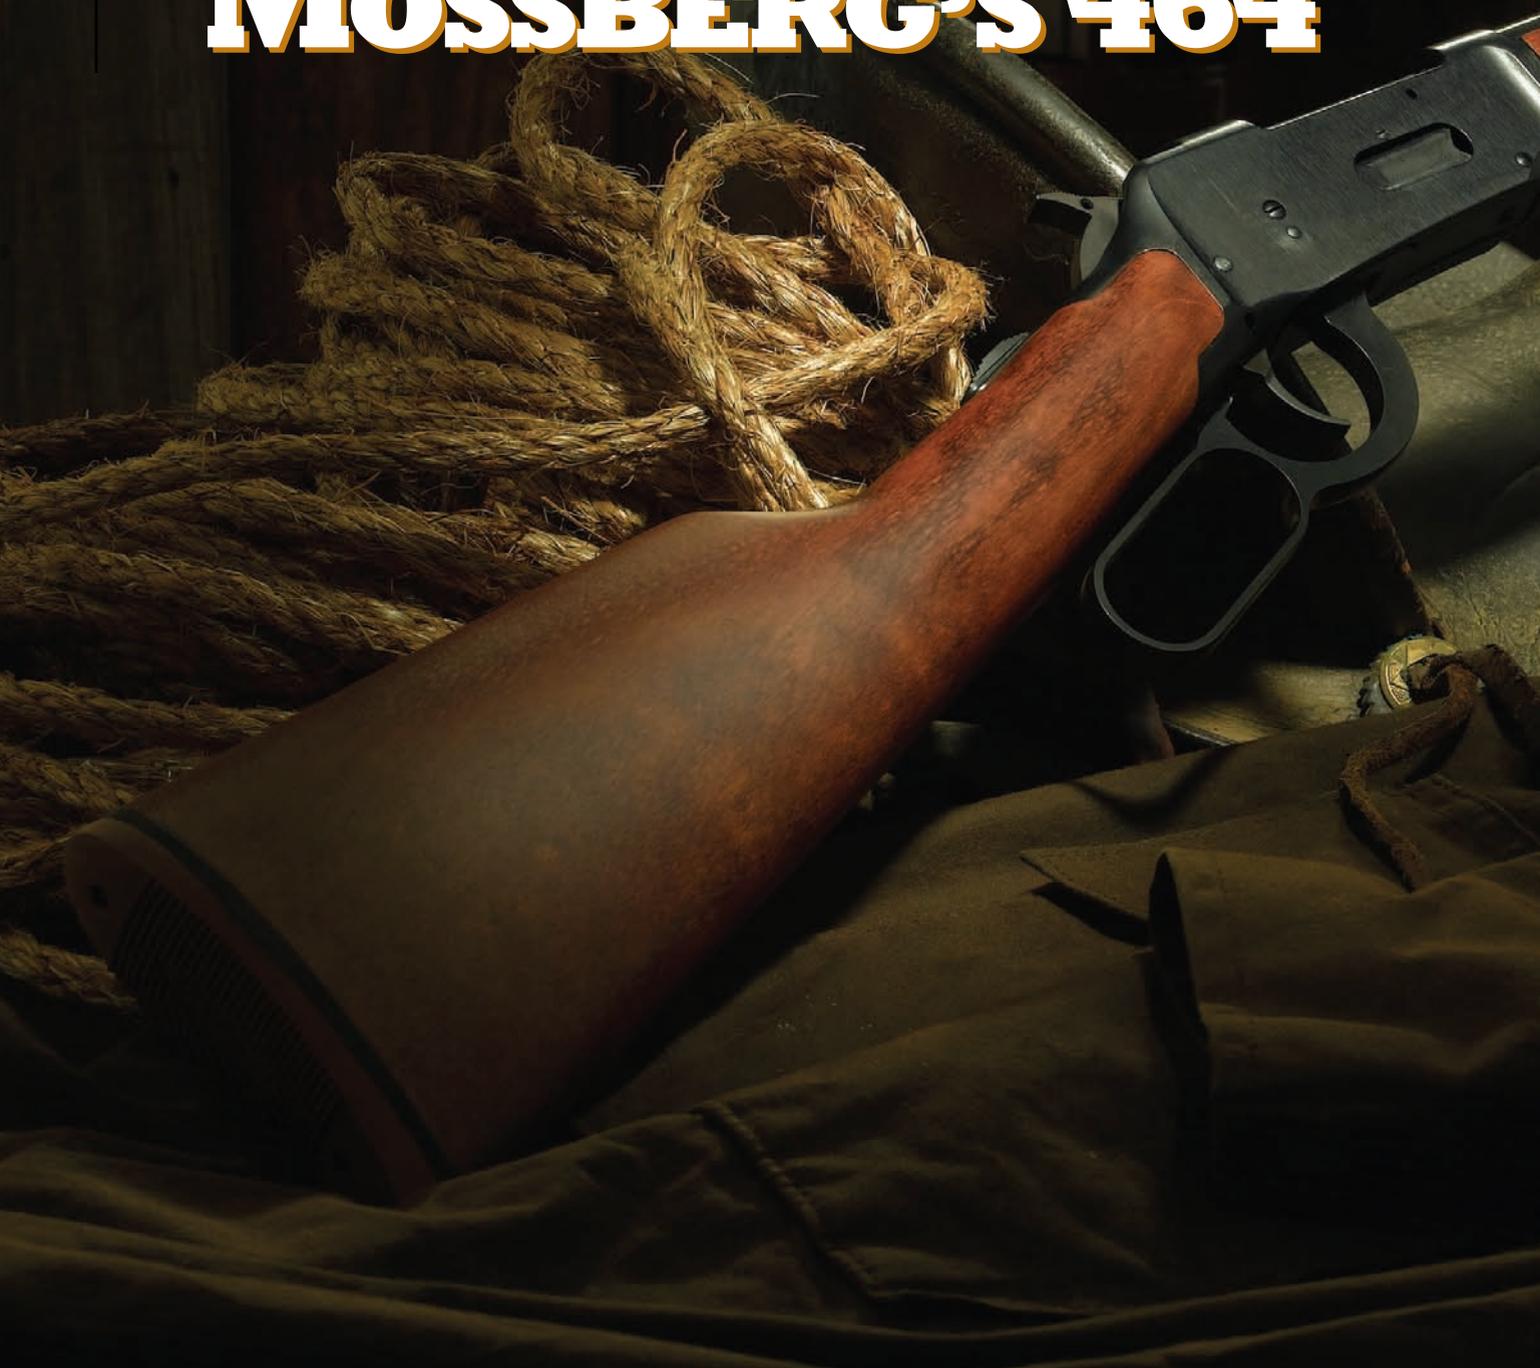

Another reason for overwhelming enthusiasm here at Mossberg is what you hold in your hands right now. In this expanded 2008 edition of the Mossberg Gun Annual, you'll find our most comprehensive catalog in our 89-year history. From feature articles by the best hunting and shooting writers in the business, to a breakdown of our complete line of firearms, barrels, chokes, and accessories — you'll find it here. We truly hope you enjoy it.

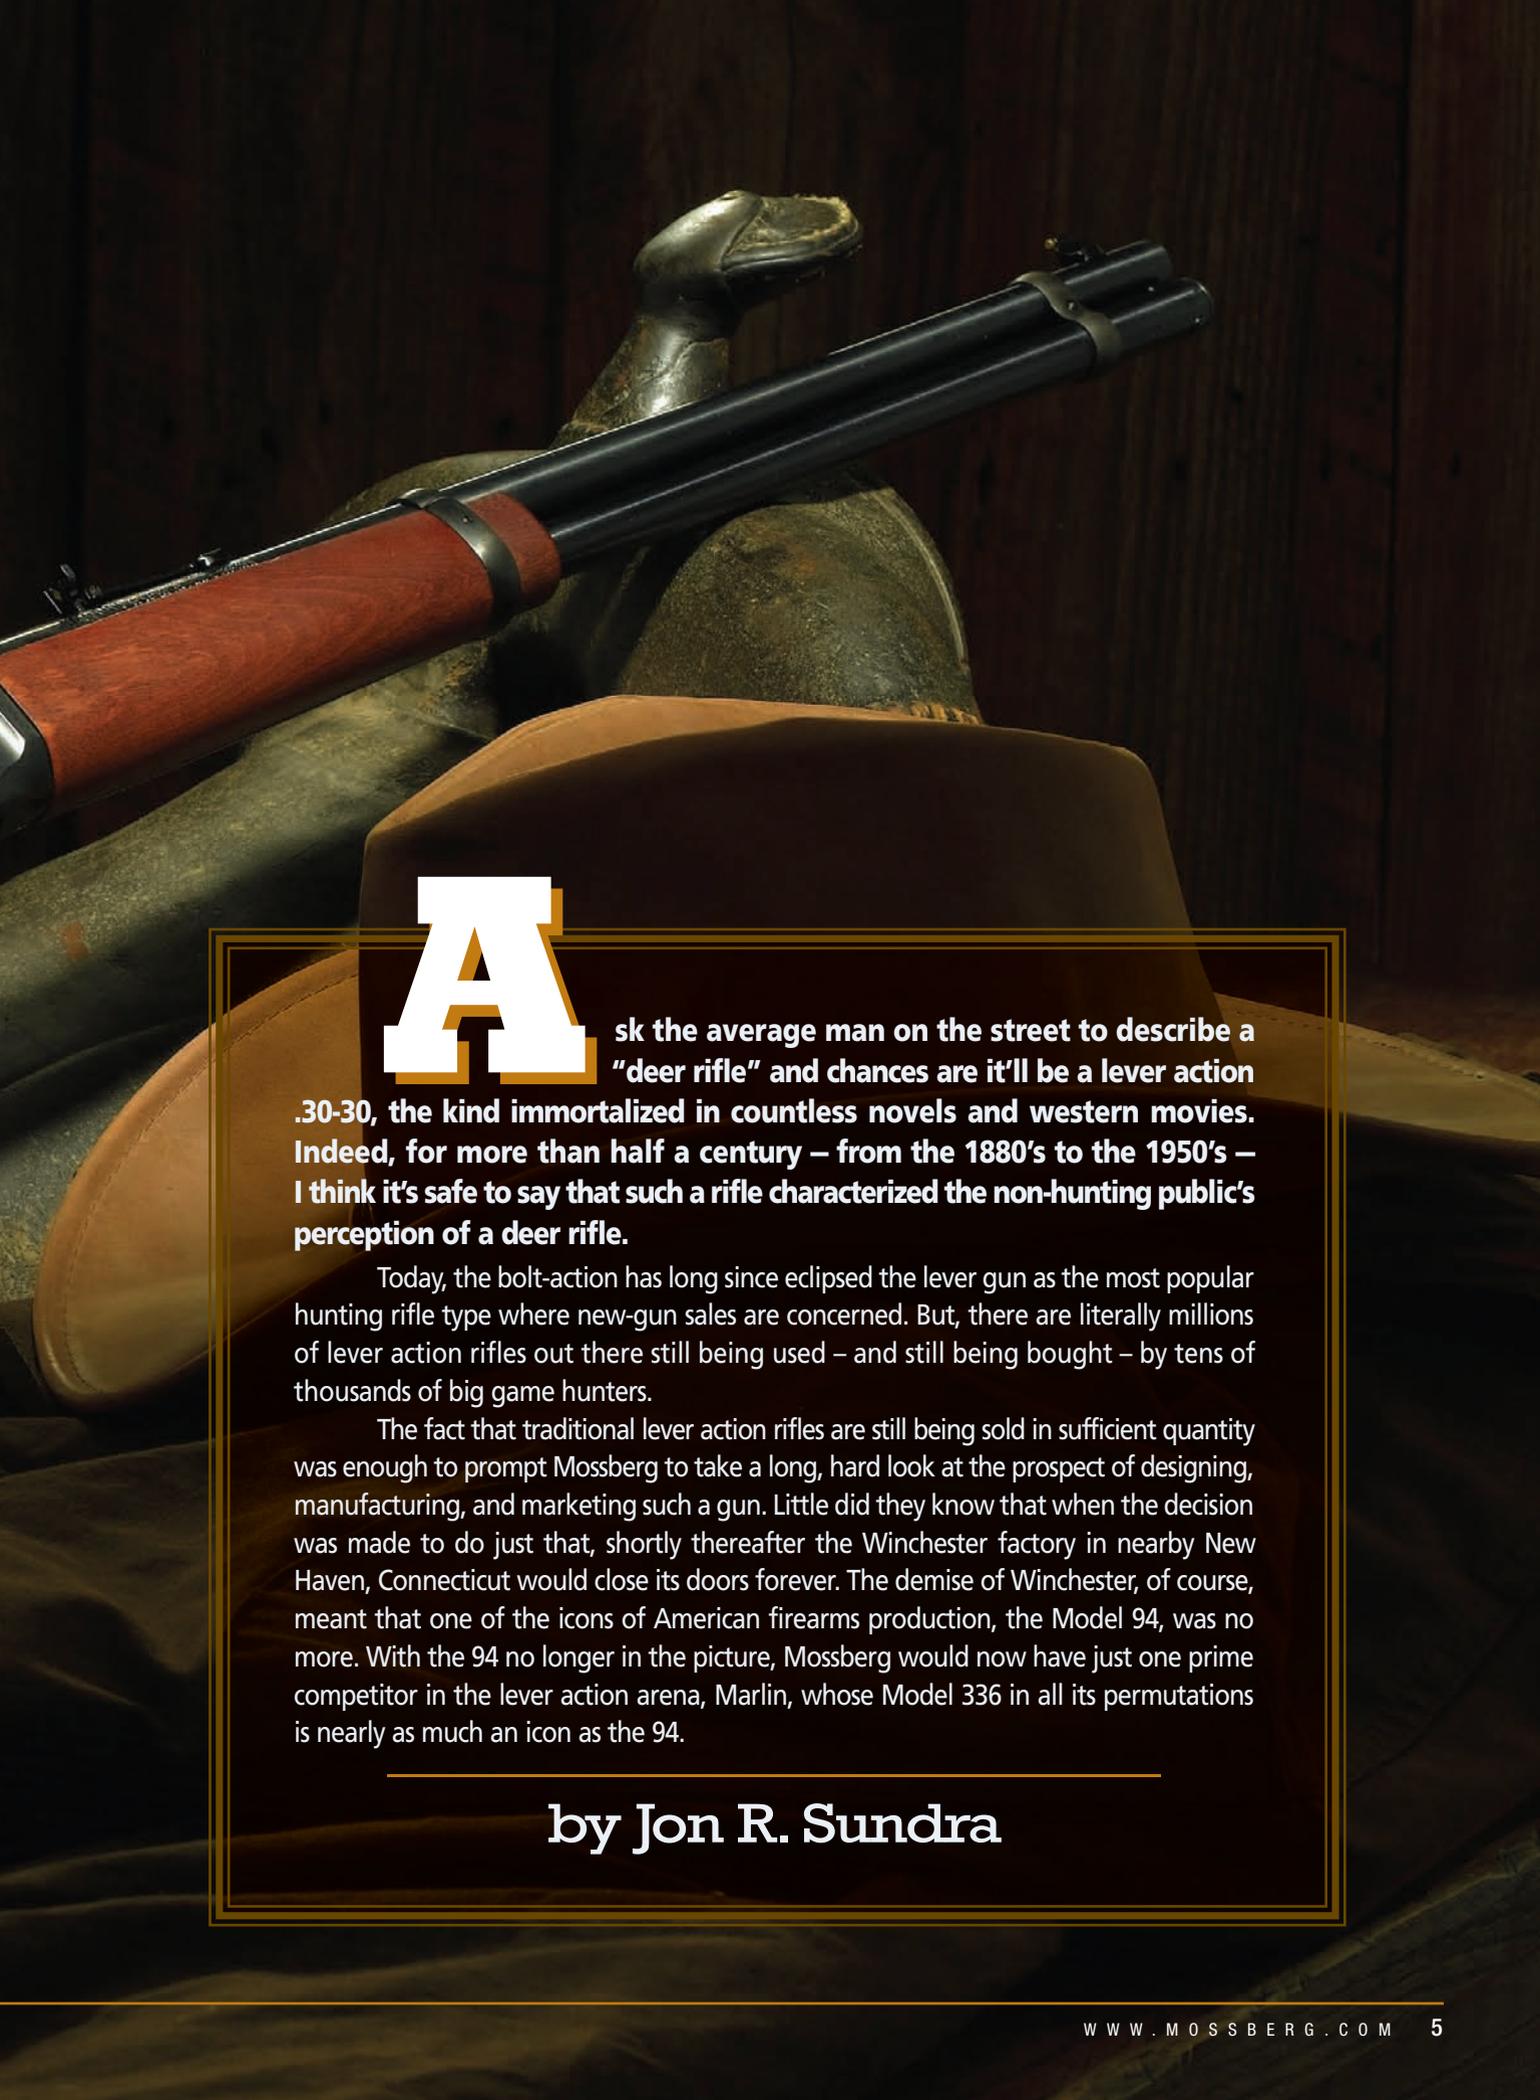

Best wishes on a safe and successful season.

A. Iver Mossberg, Jr.

THERE'S A NEW LEVER ACTION IN TOWN: MOSSBERG'S 464

A

sk the average man on the street to describe a “deer rifle” and chances are it’ll be a lever action .30-30, the kind immortalized in countless novels and western movies. Indeed, for more than half a century – from the 1880’s to the 1950’s – I think it’s safe to say that such a rifle characterized the non-hunting public’s perception of a deer rifle.

Today, the bolt-action has long since eclipsed the lever gun as the most popular hunting rifle type where new-gun sales are concerned. But, there are literally millions of lever action rifles out there still being used – and still being bought – by tens of thousands of big game hunters.

The fact that traditional lever action rifles are still being sold in sufficient quantity was enough to prompt Mossberg to take a long, hard look at the prospect of designing, manufacturing, and marketing such a gun. Little did they know that when the decision was made to do just that, shortly thereafter the Winchester factory in nearby New Haven, Connecticut would close its doors forever. The demise of Winchester, of course, meant that one of the icons of American firearms production, the Model 94, was no more. With the 94 no longer in the picture, Mossberg would now have just one prime competitor in the lever action arena, Marlin, whose Model 336 in all its permutations is nearly as much an icon as the 94.

by Jon R. Sundra

W

hen I use the term “traditional” to describe a lever action rifle, I mean the gun type as typified by the Marlin and Winchester — that they have slender, slab-sided receivers, two-piece stocks, under-barrel tubular magazines, and exposed hammers.

In both instances the actions are cycled by a forward extension of the under-lever in direct contact with the bolt. In other words, there is no cam or link arm between the two, nor is there any sort of rack and pinion arrangement to lend additional mechanical advantage or to shorten the arc of the lever. Until Hornady introduced their LeverEvolution ammunition two years ago, traditional lever guns

The New Mossberg 464 Lever-Action

with their tubular magazines were limited to flat point or round nosed bullets. “Modern” lever actions are characterized by the Browning BLR, a gun that tries its best to look like a traditional lever gun, but is totally different in that it has a rotary bolt and its action is capable of handling the pressures of modern cartridges, including magnums. Also, cartridges are stored in a box rather than a tubular magazine so spitzer (pointy) bullets do not present a problem.

After much due-diligence, the Mossberg marketing and engineering teams opted for the traditional route. No sense trying to re-invent the wheel; after all, both the Marlin and Winchester had been in production for well over a century, so it seemed prudent to not stray too far from those mainstream designs. And that’s just what they’ve done.

The new Mossberg 464 borrows a little from both the Marlin and Winchester designs, as well as incorporating several original features.

The first look I got of the 464 was when I arrived in New Mexico in mid-September for the two-day antelope season. A pre-production but finalized version of the gun had been sent on ahead by the company so I didn’t have to schlep it. Accompanying the gun, which was chambered in .30-30, was a couple of boxes of Hornady’s LeverEvolution 160 grain load incorporating the company’s revolutionary Flex Tip spitzer bullet.

At first glance the 464 looks more like an Angle Eject Model 94 in that there is no solid-top receiver with a separate side ejection port through which a cylindrical bolt is visible like on the Marlin. Instead, the ejection port is at the top of the receiver, but with some of the right sidewall milled away at the top to allow for side ejection. In a way, it resembles a bolt action in that there is what could be described as a receiver ring and bridge in which a cylindrical bolt reciprocates. And the nose of the bolt fits into the receiver ring, which is another bolt-action characteristic. The vertical-moving locking bolt slides up behind the bolt rather than into a notch on the underside of the bolt like on a Marlin. It looks to be a very safe, robust system.

Like the Marlin, the extractor is a forward extension of a collar-type spring, which fits in a groove around the bolt body. Lower on the right side of the receiver is

the familiar spring-loaded gate, through which cartridges are fed into the under-barrel tubular magazine, one behind the other. The 2-position safety is located on the rear tang, the most ergonomic of all placements, where it sits right under the thumb.

The exposed hammer does not have the traditional half-cock position, but does indeed feature an extremely reliable and innovative ‘safety system.’ Unless the safety is disengaged, the hammer cannot contact the firing pin, and unless the lever is fully up and is squeezed against the bottom tang, the trigger cannot be pulled.

Cosmetically, the 464 looks exactly like you’d expect a traditional, western-style lever action carbine to look. The buttstock sports a straight grip and a squarish lever, and the forend is secured with a steel barrel band. A 20” barrel and a full-length under-barrel magazine complete the picture. I’m sure John Wayne would have approved.

All in all, the new Mossberg lever action has the exact same handling, balance and one-hand carrying qualities that so typified the genre.

My outfitter for this hunt was Tim Barraclough of Kiowa Outfitters, whose antelope hunts are conducted around the town of Vaughn. Because the Pronghorn season is so short in New Mexico (two days) outfitters have to cram their entire season into one 48-hour hunt. That being the case, there were over 35 hunters in camp the evening before the opening Saturday, plus about 20 guides. Quite a party!

The new 464 has the looks and feel of a traditional lever action carbine, combined with 21st century features.

A through-bolt secures the 464's butt stock to the receiver. Only the hammer spring is housed within. It makes for convenient transport using short, shotgun-type travel cases.

The 464 is unique among traditional lever action carbines in that it has a cylindrical bolt and a receiver ring and bridge much like a bolt action rifle.

The 464's vertical-moving breech bolt locks up behind the bolt. Only when everything is lined up and the lever fully raised against the lower receiver tang with the safety off will the gun fire.

One comment I'd like to interject here pertains to the sighting-in facilities we had available. I can't tell you how many hunts I've been on where the pre-hunt "sighting-in" consisted of resting your rifle on a rolled-up coat over the hood of a pickup shooting at a crayoned "X" on the side of a cardboard box set out at some unknown distance. And for some strange reason, there always seems to be a 20 mph wind blowing.

Bottom line is that your rest is good for about a 2" dispersion, plus whatever MOA your rifle and load are capable of. Hardly the kind of verification you need if the shooting is going to be long, as it usually is when hunting antelope. There, we had a solid bench at our disposal, along with shooting tripods, sandbags, spotting scopes, and suitable targets set out at a measured 100, 200, and 300 yards. Quite a refreshing change from the norm.

As it turned out, I didn't need a precisely zeroed rifle and benchrest accuracy to bag my buck. The terrain had enough relief to it that stalking fairly close was possible if one could exercise just a little patience. Late on the first morning I got my chance to bag an average buck from a distance of just over 180 yards – far enough that a prudent hunter might question his chances armed with a typical lever action rifle chambered in .30-30. But at the sighting-in range my 464 averaged 2.1" groups with the Hornady Flex Tip spitzer bullets, which when sighted in 3" high at 100 yards, put me dead-on at 200.

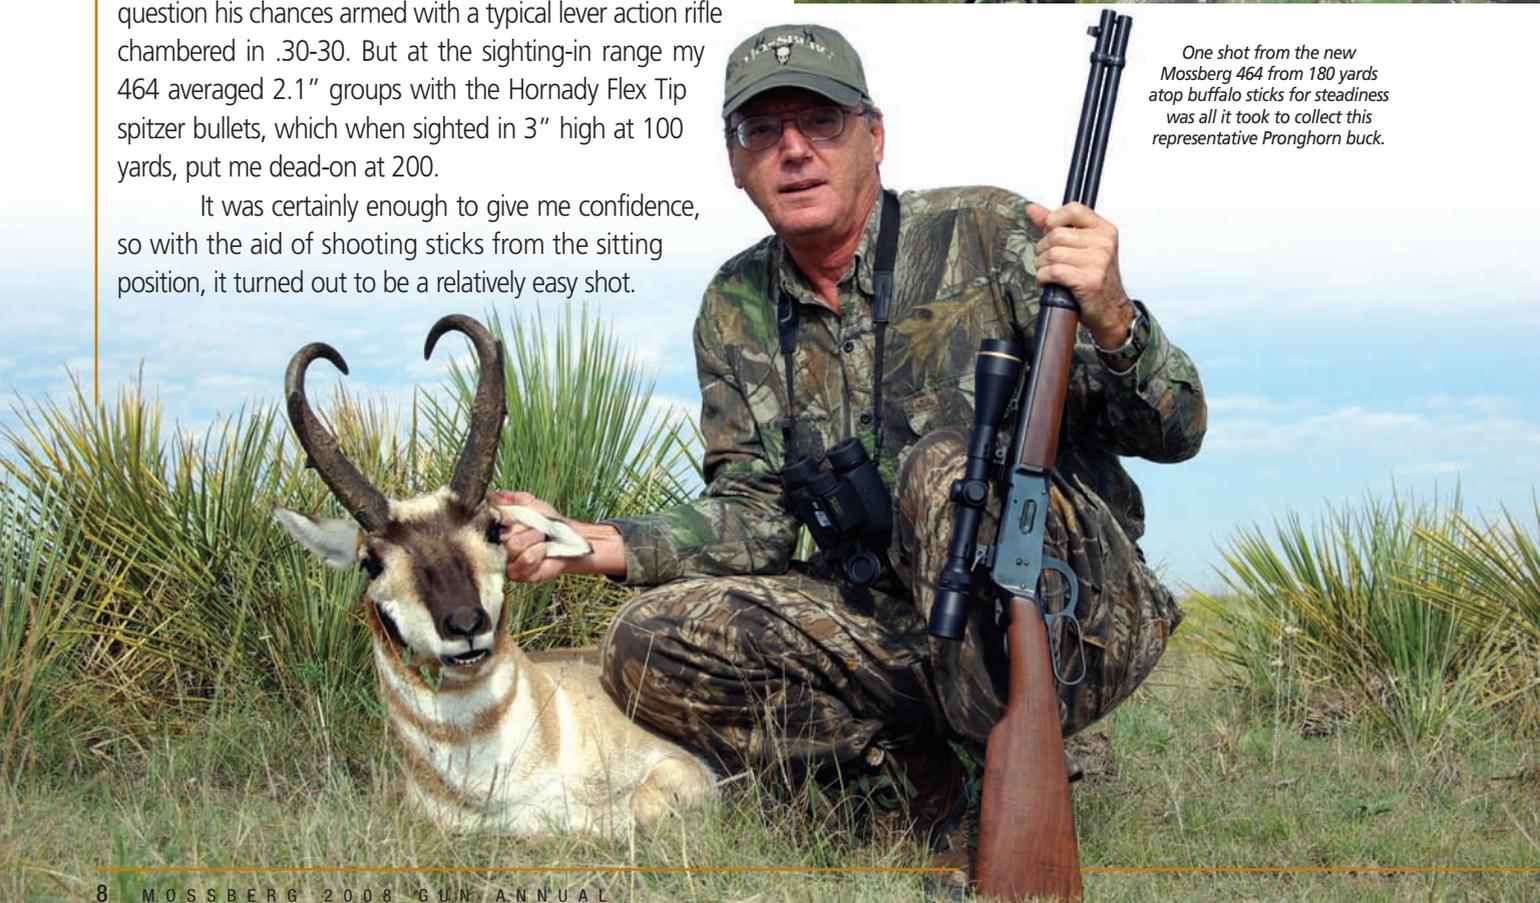

It was certainly enough to give me confidence, so with the aid of shooting sticks from the sitting position, it turned out to be a relatively easy shot.

The gun I used in New Mexico had to be returned to the factory immediately after the hunt, as it was a pre-production example. Several weeks later I was sent one of the first production guns, so I now had the chance to examine it in much more detail and to test it on a suitable shooting range. If there was any difference between the two guns, I couldn't tell, but then I'm working from memory and the photos I had taken previously.

After having a second chance to examine the gun at my leisure, there isn't much I can tell you that I haven't already. Out of the box the gun weighed 6 lbs., 11 oz., which makes it lighter than either a Marlin or a Winchester with equal 20" barrels. Overall length of the gun is a handy 38-1/4". The

One shot from the new Mossberg 464 from 180 yards atop buffalo sticks for steadiness was all it took to collect this representative Pronghorn buck.

balance point is precisely at the juncture of the forend and receiver, and it feels so good carrying it in one hand at your side that you just might feel like, well...John Wayne. Unfortunately, mounting a scope negates some of that marvelous carrying quality and handiness, but then that's the price of technology.

In addition to the 160 grain Hornady LeverEvolution ammo I used in New Mexico, I also had Federal's Classic 170 grain Sierra Pro Hunter, and Winchester's 150 grain Power Point loads. For a scope I mounted a Sightron Big Sky 1.5-5x scope using Weaver low rings. This low range variable is a perfect match in power and size for this handy little carbine. Incidentally, the 464's receiver comes factory drilled and tapped, and accommodates Weaver's #403A base, which is the front base for the Winchester Model 94 Big Bore. As already noted, because the 464's receiver ring and bridge are of identical contour and screw spacing, the same base is used both front and rear.

At 100 yards the accuracy of the Hornady LeverEvolution 160 grain FlexTip bullet wasn't that much different from what I had gotten in New Mexico. My smallest 3-shot group was 1" exactly, and the next best was 1.5"— quite impressive for a lever action, nonetheless one chambered in .30-30. The average for five groups checked in at 1.9", which is very respectable indeed and no doubt good enough to put a deer or antelope down for the count out to 250 yards or more. Close behind accuracy-wise was Winchester's 170 grain Power Point load which averaged 2.2", but it, like the other three loads, was pushing flat-nosed bullets, so the maximum practical range for it and the other three loads was about 150 yards.

All in all I have to say this new Mossberg 464 is a welcomed addition to the traditional lever action carbine scene. It may look a lot like a "Winlin," but that's more than likely a good thing, and truly, it has more than enough original design features, coupled with a highly affordable price, to put it in a class by itself. ■

The 2-position tang safety is the most ergonomic of all. It is positioned just under the thumb and the trigger hand need not be disturbed to disengage it.

The underlever is directly linked to the bolt; there is no cam or rack and pinion arrangement. This is in keeping with traditional time-proven designs that go back well over a century.

The rear sight supplied with the 464 is adjustable for both windage and elevation, and can be folded down to clear a scope's objective bell.

Jon used four different factory loads in four different weights in testing the 464. Accuracy was close to that of a typical bolt action rifle. The two best 100-yard groups fired were these using Hornady's LeverEvolution ammo. The average for five 3-shot groups was 1.9".

WORLD SLAM SHOTGUNS

A

According to the National Wild Turkey Federation's website, there are only two species of turkeys in the world. First is the North American wild turkey (*Meleagris gallopavo*) which is divided into five distinct subspecies; the Osceola, Eastern, Merriam's, Gould's, and the Rio Grande.

The second species of turkey is the Ocellated (*Meleagris ocellata*) which occupies a relatively small 50,000 square mile area comprised of the Yucatan Peninsula, limited areas of the Mexican states of Tabasco and Chiapas, and the Central American countries of Belize and Guatemala.

Collectively, these six turkeys make up the World Slam of turkey hunting, which is (other than a good night's sleep) the ultimate quest for the hard-core turkey hunter. Let's take a closer look...

by Bryce M. Towsley

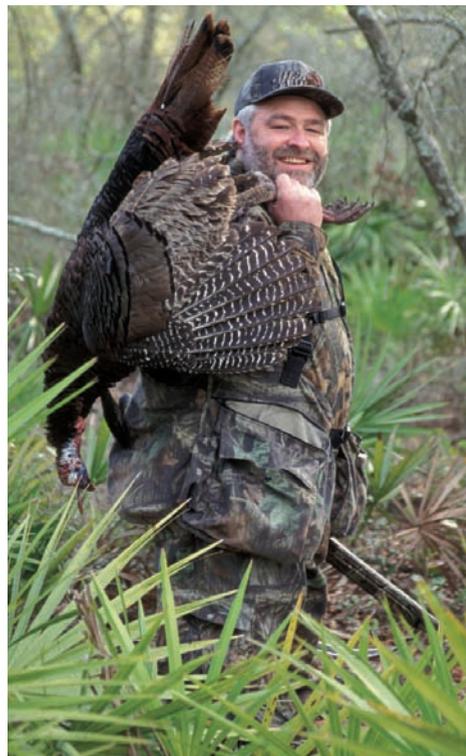

The Osceola

For most hunters seeking a “Slam,” the Osceola Turkey is the first stop. This uniquely Florida turkey enjoys the earliest hunting season and can be maddeningly difficult to hunt. This long-legged, gator dodging, indifferent bird often leaves plans for a single year World Slam in shambles before it ever gets started.

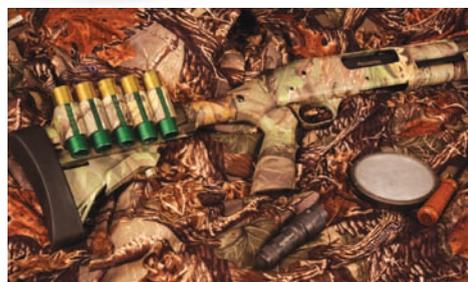

Hunting Osceola turkeys means humid and misty dawns among the cypress trees. It's cow pastures and murky swamps, mosquitoes and alligators. It's fog-filtered sunrises and sweaty, late-morning walks back to the truck. It's palm trees, palmettos and the scent of orange blossoms. It is gator tail and frog legs for lunch and it's a wonderful way to start any new turkey season.

Most Osceola hunters know that you have to wait them out sitting rock still, and holding the gun in position for hours can tax any turkey hunter's resolve. But, it's a lot more comfortable if you have a pistol grip on the shotgun so that your hand is held at a more natural angle as you wait.

The trend to “tactical” style shotguns for turkey hunting, like the Mossberg 535, also allows the option of an adjustable length of pull stock that makes the gun more comfortable when you are sitting bunched up against a cypress tree.

For comfort over long hours spent waiting out Osceola, choose a “tactical” stocked model like the 535 ATS. The pistol grip makes the gun easier to hold in shooting position for those long periods of time. And, the adjustable stock (equipped with an extra 5-shell side-saddle) can be fitted to the shooter's size, posture and needs.

Hunting Osceolas is by no means an easy start to bagging a World Slam. Murky swamps, mosquitoes and the occasional gator will provide even more obstacles to your already elusive prey.

The 835 Thumbhole is the perfect solution for the hunter looking for a lighter weight, run-and-gun choice when staying in one place is not an option.

The Eastern

What's the toughest turkey to hunt? Most of us who have chased them all say it's the Eastern. Why? Hunting pressure, pure and simple.

The dumb ones die and the smart birds live to reproduce. Darwin was right and it's just that simple. The Eastern turkey lives where the people live, so hunting pressure is a fact of life for them.

The Eastern turkey ranges from Canada to Florida. He inhabits the northern hardwood ridges clear to the southern swamps and is hunted under the widest variety of conditions that any turkey can lay claim to.

What you can count on is plenty of walking and very spooky birds. I like a lightweight shotgun, because you carry it a lot more than you shoot it. And

given that turkey guns kick and lightweight turkey guns kick even more, a good recoil pad and a ported choke makes sense. The thumbhole stock Mossberg 835 is just about the perfect turkey gun in my estimation. Add to those features an over-bored 24-inch barrel and light-gathering, fiber optic sights, it's almost as if it was designed specifically for eastern turkey hunting.

The Merriam's

The Merriam's Turkey is found on the edge of the Great Plains and into the foothills of the Rocky Mountains. With tail feathers rimmed in white, they might well be the best-looking of all the sub-species. Merriam's love the wide-open spaces; they flock under big skies and feed along the rim rock. All in all, Merriam habitat is the most spectacular, and for that reason many sportsmen enjoy hunting them more than any other.

Hunting Merriam's turkeys implies windy days on the prairie. It's belly crawling, because the only cover is a tuft or two of grass. It's climbing to the hint of a gobbler while gasping in the thin air of the mountains and it's breathing deep the smell of Ponderosa Pine. It's late season snowstorms and slippery, muddy dirt roads. It's long shots and long walks.

Hunting Merriam's, you'll face long shots under tough conditions like steady winds. To take you best shot, you'll need a shotgun with the magnum punch found in Mossberg's 935 Magnum and 835 Ulti-Mag lines. Shown: the 935 Magnum Grand Slam Series (top) in Hardwoods HD Green, and 835 Ulti-Mag Thumbhole (bottom) in black synthetic.

When hunting Merriam's I know I'll be dealing with wide-open spaces and lots of wind. I want my shotgun to extract all the velocity I can get, so I want it chambered for a 3 1/2 inch 12 gauge load. The Mossberg 835 Ulti-Mag was the first 3 1/2 inch 12 gauge shotgun and it's still the gun that sets the standard. Mine will be charged with #4 shot, probably one of the new heavyweight tungsten loads. That's because I want lots of pellet weight to carry energy out to the longer distances in this open country.

The Gould's

Hunting the Gould's turkey in Northern Mexico is wandering land full of ocotillo, agaves, yucca, catclaw and scattered scrub oaks. The mountains rise high enough that even in the desert the temperatures are comfortable. The sun shines just enough each day, it never rains, and the cold wind never blows. I don't know what turkey hunting heaven is like, but I think I have seen something very close and it's the habitat of the Gould's turkey.

Hunting here means burritos for breakfast and sipping good tequila around the campfire at night. The turkeys don't see a lot of hunting pressure and are a bit unsophisticated. But, you don't hunt here for challenging turkeys; you hunt for an excuse to wander some of the finest ground on earth.

This is open land and the turkeys are sharp eyed and survival oriented. Lots of exotic things will eat them here, including jaguars and ocelots. Be prepared for long shots. Optical sights improve your odds so a turkey gun that is drilled and tapped for scope mounting is a big advantage.

The Rio Grande

The Rio Grande turkey extends his range from south Texas up into Kansas, but is most associated with the Lone Star State. Hunting Rio Grande turkeys is prickly pear cactus; rattlesnakes and biscuits with sausage gravy for breakfast. It's pickup trucks, country music and miles and miles of Texas. On a good ranch there are so many Rio Grande Turkeys running around that the numbers alone become your biggest obstacle to success. When you have what seems like every turkey in North America waking up and greeting the morning, how are you and your mouth call going to stand out from the crowd?

I like a shotgun choked up tighter than Hillary Clinton at an NRA convention. Not necessarily because of the possibility of a long shot, which is a consideration, but more often you will need to pick your gobbler out of a bunch of turkeys. With an ultra-tight pattern the possibility of hitting another turkey with the fringes of the pattern are reduced.

Barrel and choke tube porting reduce felt recoil and muzzle jump for quick second shot recovery.

Hunters took this Rio in Northern Texas. Though its range extends well northward into Kansas, the Rio is most associated with the Lone State State.

The Ocellated

Called *cutz* by the Maya, the ocellated turkey is known by several names: *pavo*, *pavo ocelado*, or the Mayan Indian name, *ucutz il chican*. (Don't ask me how it's pronounced. I don't have a clue!)

Both male and female ocellated turkeys have a blue-colored head and neck with distinctive orange wart-like growths, called nodules, although they are more pronounced on males. The head of the male also has a big blue knob on top that is covered with these nodules and the size of this "crown" is considered part of his trophy quality. Ocellated turkeys also have a bright red ring around the eye. The red ring, blue head, orange warts and blue tail feathers combine to make him if nothing else, colorful (see closeups, opposite page).

And, he sounds just as weird as he looks, which is weird indeed. His gobble sounds more like a wheel bearing seizing up than anything a turkey is supposed to vocalize.

A steady, reliable partner for generations, the Mossberg 500 offers a full-range of standard and specialty turkey models to choose from.

The jungle is his domain and it's full of exotic wildlife. The traditional way to hunt ocellated turkeys is to find a male that is singing on the roost in the morning and sneak in to shoot him out of the tree.

Shooting a turkey from his roost is considered sacrilege for an American turkey hunter, but the ethics of one place are not necessarily those of another. Shooting ocellated turkeys off the roost is the traditional, accepted and perhaps the only successful way to hunt these birds. It is how it's been done for generations here and because it is traditional, it's how I hunted my bird.

What also is apparently a tradition is harassment by the government. They thought it great sport to shake down the gringos and to confiscate our guns and ammo. We borrowed guns from the outfitter to complete the hunt, but the lesson stuck. My advice: bring a reliable, strong performing shotgun, but one that's not too expensive and one that you won't mourn too much for if you lose it to some petty bureaucrat. On the other hand, if you do bring it home you want it to be a shotgun that will, in spite of its low price, provide years of reliable service. The gun that best fits that description? The reliable Mossberg 500, the workhorse of shotguns. ■

The Anatomy of a Turkey Pattern

The ultimate pattern from a turkey-hunting shotgun is much different from what we expect from traditional shotguns. Most shotguns are designed for shooting at things that scurry and fly fast, and the lion-share of shotgun-choke-ammo configurations are optimized for that.

The goal here is to place as many pellets as possible on the turkey's head, which is about the size of a small adult's fist. Unless you have blown your stalk, or can't sit still, he will not be flying or running, and you will be aiming your turkey gun rather than pointing it. In fact, how we shoot a turkey gun has much more in common with a rifle than a traditional shotgun.

The goal is to have as tight a pattern as possible with a very dense and small diameter core. This core is almost a "bullet" that we aim at the turkey's head and any pellet that is not contained in it is wasted. The goal is to deliver the center of the pattern with precision, not to distribute the shot in a wide pattern to compensate for poor aim or a moving target.

Choke Tubes Patterns should be as wide as specified by the choke and distance, but with the pellets evenly dispersed throughout. While the pattern may feature a large "core" (traditionally 20-inches when measuring) with a slightly denser pellet distribution, the true focus is an extremely even pellet distribution throughout the entire pattern so that there are no "holes" that the bird or target might fly through.

All Mossberg turkey shotguns feature a specialized turkey tube — ranging from the X-Factor ported choke, with a .695 constriction to Ulti-Full and XX-Full variations for standard bore models. Keeping patterns dense and uniform, tubes are matched perfectly to the gun, right out of the box.

Each Mossberg 935 and 835 shotgun is overbored to 10 gauge dimensions.

Overboring A standard feature on Mossberg's 835 and 935 turkey models is barrel overboring. This means that the entire bore, from chamber to choke, is several thousandths of an inch larger than the nominal .728" of a 12 gauge.

Besides the added benefit of reduce felt recoil, overboring results in less pellet deformation and tighter, more uniform patterns as the overboring provides a "gas cushion" between the pellets and barrel wall.

New & Noteworthy

The New 100 ATR Night Train Tactical Rifle

100 ATR Night Train: Black is Beautiful

The newest addition to Mossberg's growing line-up of special purpose firearms is the 100 ATR Night Train, a tricked out, blacked out centerfire bolt-action tactical-style rifle in .308 Win. caliber. Built on the basic 100 ATR short-action, the Night Train comes standard with a Picatinny rail for the ultimate in scope-mounting versatility, and a factory-mounted and bore sighted 4-16x50mm variable scope with sunshade.

Other features further adding to the Night Train's incredible value are a folding bi-pod, flip-open lens protectors, and a heavy-duty nylon sling.

With features and accuracy matching tactical rifles costing two and three times more, the new 100 ATR Night Train is the one to beat.

NYPD Selects Mossberg

When the NYPD decides to equip its 36,000-man police force with a new duty shotgun, it is a monumental task and one that is not to be taken lightly. After all, officers' lives are at stake. So when the city decided recently to adopt Mossberg's 590A1 as its new police duty shotgun, it is a testament to its ruggedness and reliability.

Though modified for police use, it's comforting to know that the 590, which is now in use not only by the NYPD, but by hundreds of law enforcement agencies here and abroad and by the U. S. Military, is the same pump action on which every sporting version of the 500 is based. Now that's peace of mind. See Page 28 for more details.

The 464 Lever-Action: Redefining an American Icon

You just can't keep a good idea down. Recent improvements in ammunition and ballistics have breathed new life into that

perennial American favorite, the traditional lever action rifle. Recognizing those advancements, Mossberg turned its design engineers loose with the directive to improve the iconic "deer rifle," but not change the basic characteristics that made it a favorite with over six generations of hunters.

The result is the 464, a traditional lever-action carbine that redefines accuracy, safety, and of course, value, yet retains all the cosmetic and mechanical attributes one expects in a western style rifle. Truly, the new Mossberg 464 sets new standards for what has proven to be a timeless design.

Mossberg International's 817 Varmint

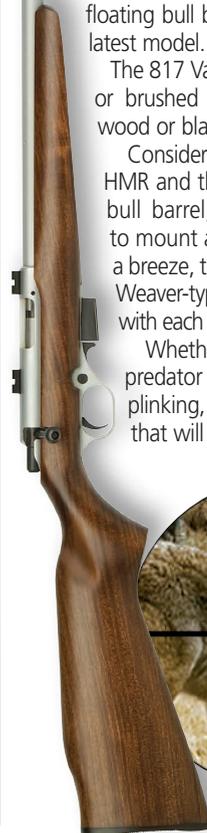

Imagine combining the sleek style and handling of the 817 bolt-action rimfire rifle with a tack-driving bull barrel. That's exactly what Mossberg International has done for 2008.

To extract every last bit of accuracy the .17 HMR is capable of, a 21" free-floating bull barrel is standard on this latest model.

The 817 Varmint is offered in blued or brushed chrome, set into hardwood or black synthetic stocks.

Considering the range of the .17 HMR and the accuracy of the 817's bull barrel, you'll definitely want to mount a scope, and doing so is a breeze, thanks to factory-installed Weaver-type bases included free with each gun.

Whether it's serious pest and predator hunting or just plain plinking, this is one combination that will not disappoint.

Mossberg puts an innovative spin on the classic western-style deer rifle with the new 464 Lever-Action. See full story, starting on Page 4.

930 SPX: Man's Real Best Friend

Borrowing from Mossberg's extensive experience building special purpose shotguns for military and law enforcement agencies worldwide, the all-new SPX emerges as yet another version of its popular 930 autoloading shotgun.

Similar to the existing 930 Home Security model, the SPX is distinguished by its 18.5" cylinder bore barrel with 3" chamber; an LPA ghost ring rear sight and a winged fiber optic front sight; an extended 7 round magazine, and a Picatinny rail for the ultimate in optical sight mounting versatility.

Other features that make the 930 SPX the perfect home defense shotgun is its reliable, easy-to-maintain gas system, ambidextrous thumb-operated safety, and a quick-empty magazine feature for easy loading and unloading. See Page 22 to learn more.

500 Tactical 20 Gauge

500 Rolling Thunder 12 Gauge

Make Way for Rolling Thunder!

The venerable Mossberg 500 pump action 12 gauge, which serves as the basic platform for more sporting, home defense, tactical and military shotguns than any other, is now available in yet another variant.

Called "Rolling Thunder," this newest home defense/tactical model features a 23" Cylinder Bore barrel with 3" chamber. Other standard features include a barrel heat-shield and recoil-reducing stabilizer, drilled & tapped

receiver, and a 5+1 capacity.

The Rolling Thunder's short overall length and light 6-3/4 lb. weight combine to make for the kind of easy handling, fast-swinging gun needed for defense situations in tight places.

500 Tactical 20 Ga. Pump-Action

It may be "just" the little brother to the 12 gauge 500 Tactical Cruiser, but this 20

gauge packs considerable punch. Built on the durable, dependable 500 pump-action platform, this special purpose model is fitted with a 20" cylinder bore "stand-off" barrel with a bead brass front sight and a 3" chamber.

A practical matte blue finish and 6 round magazine capacity round out the set-up. Adding to the ruggedness of this unique model is a black synthetic butt stock and forend fitted with sling swivel studs for sling attachment.

The next species of scouting cameras has evolved with

PROWLER^{dvs} Digital Video Stamping

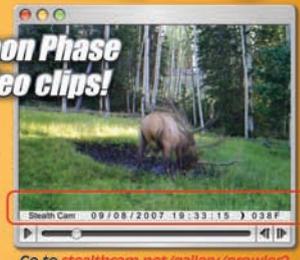

Time, Date, Temperature & Moon Phase stamping on ALL captured video clips!

Adjustable video records from 5 to 90 seconds per triggering

2.0 Megapixel crisp infrared digital pictures

Burst Mode captures between 1 and 9 images per triggering

5.0 Megapixel color digital pictures

New & Noteworthy

The New Silver Reserve (top) and Onyx Reserve Side-by-side shotguns.

Reserve Series SxS's Debut

In the Mossberg International tradition of providing rugged, dependable sporting arms packed with features — yet affordably priced — comes the Reserve Series of side-by-side shotguns.

Like the Reserve over-and-under shotguns, these new classic doubles are offered in both Silver Reserve and Onyx Reserve configurations, each in 12, 20, and 28 gauge. The former features blued barrels with satin-finished silver-colored receivers; the Onyx models are in traditional all-blue. Chrome-lined barrels with 3" chambers are standard, as is the Sport Set of five interchangeable choke tubes.

Stocks are of Select Turkish Black Walnut with a satin finish, and the action is robust, with twin underlugs securely locking up the barrel sets. With the 28 gauge model weighing in at a feathery 6.4 lbs. and the 20 and 12 gauge guns at 6.5 and 7.1 lbs. respectively, you'll find these Reserve Series side-by-s have the weight and balance that makes them a joy to carry, even after hours in the field.

702/802 Plinksters: Pretty in Pink!

In response to the growing youth and female segments of the shooting sports, Mossberg International has developed a .22 LR rimfire duo for those shooters wanting to make a fashion statement.

The most obvious distinction is their color — either model can be had with a solid pink or pink marble finish.

The 802 is a bolt action, the 702 a semi-auto, but they share many common features. Each features grooved receivers to accept 3/8" scope mounts; ergonomically placed magazine release and safety buttons; 10 round detachable magazines, and free-floating barrels. Both guns combine accuracy, dependable performance, and incomparable value.

Thinking about presenting your daughter, wife or girlfriend with a new .22 rifle?

Think pink... Pink Plinksters that is.

The 702 (left) and 802 Plinksters address the youth and female markets with a colorful pair of new models.

Mossberg and Blackwater Join Forces

In its search for a world-class facility to expand its armorer training courses, O. F. Mossberg & Sons has chosen Blackwater Worldwide for its shotgun armorer training needs.

Established in 1997, Blackwater provides innovative solutions to U. S. Government and non-government clients alike. Remarkably, Blackwater conducts operations in nine countries, delivering critical assistance to clients focused on post-conflict and post-

Headquartered in Myock, North Carolina, Blackwater is situated on 7000 acres, making it the largest private firearms training center in the United States.

disaster stabilization efforts.

In light of its extensive experience in the field of armorer training, it is fitting that Mossberg has chose Blackwater to provide the ultimate training experience. *For more on the Blackwater experience, see Page 26.*

The New 801 Half-Pint .22LR Rifle

One Shot Wonder: 801 Half-Pint .22

Far too many youngsters are introduced to the shooting sports by well-meaning parents who hand their sons or daughters a rifle that is too heavy and out of proportion for them to handle comfortably. Not so with the 801 Half Pint. Here's a bolt-action single shot .22 LR rifle designed specifically for young shooters as an ideal starter gun.

The Half Pint's 12-1/4" length of pull, 16" barrel, and 4 pound weight make for a rifle

that mounts and swings easily, even for the smallest statured shooter.

All the necessary features are there — a grooved receiver for the easy mounting of a scope when the time comes; a blued metal finish with a durable hardwood stock; a free-floating barrel and fully adjustable iron sights.

As your young shooter becomes more familiar with the gun and more experienced, an optional 10-shot magazine can be used to convert the Half Pint into a repeater.

Offered at an astoundingly affordable price, this little .22 is the perfect starter gun for taking on all kinds of assorted targets — without breaking the bank.

The new Thumbhole Tip-Down stock is available on 702 and 802 Plinkster, and 817 rifles.

What's a Thumbhole Tip-Down?

For the first time, Mossberg International has combined the ergonomics of the highly functional thumbhole stock with a unique tip-down forend.

Available on 702, 802 and 817 rimfire models, these innovative rifle packages are perfect for any form of small game hunting, informal target shooting or just plain plinking.

The stock provides a vertical, pistol-like grip for both hands, which both anatomically and

ergonomically are the most natural positions for the human hand to assume when holding a rifle to the shoulder. This results in more natural positioning of the hands and a comfort level more conducive to accurate shooting, be it from the prone, kneeling, sitting or off-hand positions. These Thumbhole Tip-Down models share many common features, but differ from model to model. Consult the Buyers Guide, Pages 86-88 and 98-99 for detailed specifications. [n](#)

“A shotgun will beat a pistol every time.”

So stated a Detective from the Florida Department of Law Enforcement at the conclusion of a justifiable homicide investigation of an attempted robbery of two Florida homeowners.

During the incident, a violent criminal on the run from police had smashed through a sliding glass door and entered the home with a gun in hand. The homeowner heard the noise and his wife's screams for help.

The man entered his kitchen with a pump-action shotgun in hand and confronted the felon. The drug-crazed robber pointed a handgun at the homeowner who in turn responded like any rational man in fear for his life.

Final score: Good Guys: 1 — Bad Guys: 0.

During the official investigation, the members of the FDLE found the homeowner to be justified and well within his rights to protect his wife and himself with any force up to and including deadly force. The homeowner was completely exonerated of any wrongdoing.

FACE-OFF

SHOTGUNS FOR PERSONAL DEFENSE

By Paul Markel

Mossberg's defense guns: the 500 Tactical (top) with Marinecote finish, and the 500 Tactical Cruiser featuring a muzzle break/standoff and pistol grip stock.

The previous real-life account is an excellent example of law-abiding citizens justifiably protecting themselves from felonious attacks by the criminal element. For decades, Mossberg has been manufacturing reliable and affordable firearms for gun owners worldwide. This year, Mossberg's catalog includes more Special Purpose shotguns than at any time in recent memory. You'll find pump-action and semi-automatic shotguns chambered for 12, 20, and .410 shotgun shells, and a seemingly endless array of barrel lengths, finishes, stock configurations, and accessories.

500 Persuader and 500 Tactical

For the last 45 years, the 500 pump-action has served as the unwavering hallmark of the Mossberg line. And as previously noted, there's seemingly an endless sea of options to choose from.

Shooters can select from a straight/fixed stock (with or without the Speedfeed option) or pistol grip only as well as a retractable pistol grip stock. Metal finishes include blue, Marinecote™, or Parkerized, each serving a specific purpose. Tubular magazine capacities vary from five shots up to eight depending on the model and gauge.

One of the greatest attractions of the pump-action shotgun in general, and the 500 line specifically, is the ease of operation. With its elevator resting in the 'up' position when the action is closed, loading and unloading the 500's magazine tube couldn't be simpler or more convenient, and the top-of-the-receiver, thumb operated safety is truly ambidextrous and is always just a glance away.

500 Tactical models feature a retractable six-position stock which holds five extra shotshells.

500 Tactical Cruiser models are equipped with a pistol grip stock for maximum range of motion.

930 Autoloader

The introduction of the Mossberg 930 series opened another chapter for the company. Not only is the semi-automatic, gas-operated shotgun a good choice for hunters and sportsmen, it offers a solid platform for the Special Purpose segment as well.

Shortly after the 930 was put into production, Mossberg offered a "Home Security" version of the gun. This model had a fixed polymer stock and forend, a blued steel finish and an 18.5 inch cylinder bore barrel. A combo package is available with an 18.5 inch barrel and a 28 inch vent rib wing shooting tube. These shotguns are fed from a spring-loaded tubular magazine.

930 Tactical and 930 SPX Autoloaders

The newest 930 Special Purpose shotguns include the 930 Tactical and the 930 SPX. Regarding the Tactical model, it features the all-new stand-off barrel. This component is a unique 18.5 inch barrel, with a unique 'stand-off' permanently affixed to the muzzle-end. The only sight on the gun is a large white dot front sight. While the primary purpose of the stand-off is tactical breaching, it does not hamper the use of normal 00 buck or slugs. My experience with this barrel both on the 930 and 500 models is that shot patterns tend to run tighter and more consistently than normal cylinder bore guns.

In looking at the SPX model, it has the most special purpose features of any of the guns. The SPX utilizes the basic 930 semi-automatic action with the black polymer stock and forend. Atop the receiver you will find a handy, factory-installed Picatinny rail. On the rail Mossberg has mounted a robust, fully adjustable LPA brand Ghost Ring peep sight, featuring click adjustments for windage and elevation.

Out in front, mounted atop the 18.5 inch smooth bore barrel is a raised front sight. The front sight unit has a red fiber optic center post, which is flanked on both sides by steel "wings" for added durability in the field. To put the "X" in SPX, Mossberg has installed a Choate magazine tube extension to the shotgun. This component takes the capacity to seven plus one in the chamber.

Note the LPA adjustable rear sight and multi-functional Picatinny rail found on the 930 SPX.

The Choate magazine tube extension increases the SPX's capacity to 7+1.

The SPX features a fiber optic front sight with a red center post flanked by steel protective "wings".

New Autoloading Special Purpose shotguns: the high-cap 930 SPX (top) and the breaching-barreled 930 Tactical.

Time On The Range

Over the last fifteen months I have had the opportunity to work with a number of guns from Mossberg's Special Purpose line. I have literally put over a thousand rounds of 12 gauge ammunition combined through two 500's and two 930's. These shells included birdshot, buckshot, slugs, and specially designed frangible rounds for door-busting.

Each gun has its own attributes and unique characteristics. The 500 shotgun series is naturally less expensive from the consumer's standpoint and is a simple, straight-forward design.

The 930's are only a bit more complex but offer the shooter a self-loading capability that, from my experience, is extremely well-made and reliable. How reliable? I can tell you that during one evaluation I fired somewhere in the neighborhood of 450 to 500 rounds of 12 gauge ammunition through a Model 930 over a period of two days. *(continued)*

The gun started out clean and lubricated, but I did not perform any other maintenance on it until the end of the week. It cycled every round without a hitch — a testament to their robust design and durability under real-world conditions.

A friend of mine took a long-barreled Model 930 to Argentina to hunt doves and ducks. During the wing-shooting safari he put over a thousand rounds of ammunition through his gun, and again, it ran without a hitch.

As you may know in parts of Argentina doves are nearly as thick as locust. He reported that they were shooting so fast and so often that they had to pour water down the barrels to cool their guns.

Closing Thoughts

When it comes to choosing a firearm for self-defense we carry handguns because they are compact and easy to tote all day long. When concealment is not an issue the long gun, specifically a shotgun, is the better choice. The power factor of a shotgun versus handgun is not really open for debate.

The long gun gives us four anchor points on the gun rather than only two and a handgun. The longer radius offers a reduced margin of error when engaging a lethal threat. While many of us may have thought it, that detective in Florida hit the nail on the head when he stated, "A shotgun will beat a pistol every time." ■

Birdshot vs. Buck vs. Bullets

When it comes to choosing a firearm to defend yourself, picking the gun is only part of the equation, because when it comes to stopping the predatory human animal, the load you choose does make a big difference.

How about the handgun versus shotgun question? Which one will best stop a predator is really a simple matter of physics. Even the largest caliber handgun can only generate so much force. The 230 grain .45 ACP bullet, for example, traveling at 850 feet per second is generating about 370 foot pounds of energy at the muzzle. Comparatively, a one ounce slug is generating over 1600 foot pounds at the muzzle, and the combined weight of eight 00 buck pellets gives over 1500 FPE. Also, a 12 gauge slug creates a wound channel nearly an inch in diameter and a single round of tactical buckshot will give you either 8 or 9 .33 caliber wound channels.

Some may offer that a load of birdshot with hundreds of pellets is a good load for "close quarters shooting." One ounce of #8 lead shot contains roughly 410 pellets, the equivalent load of #7 1/2 shot has slightly less. Yes, a load of birdshot is very loud and a contact shot would be devastating with the burning propellant gas doing a good amount of damage. However, loud noise doesn't stop deadly felons and a contact shot is not something we can count on.

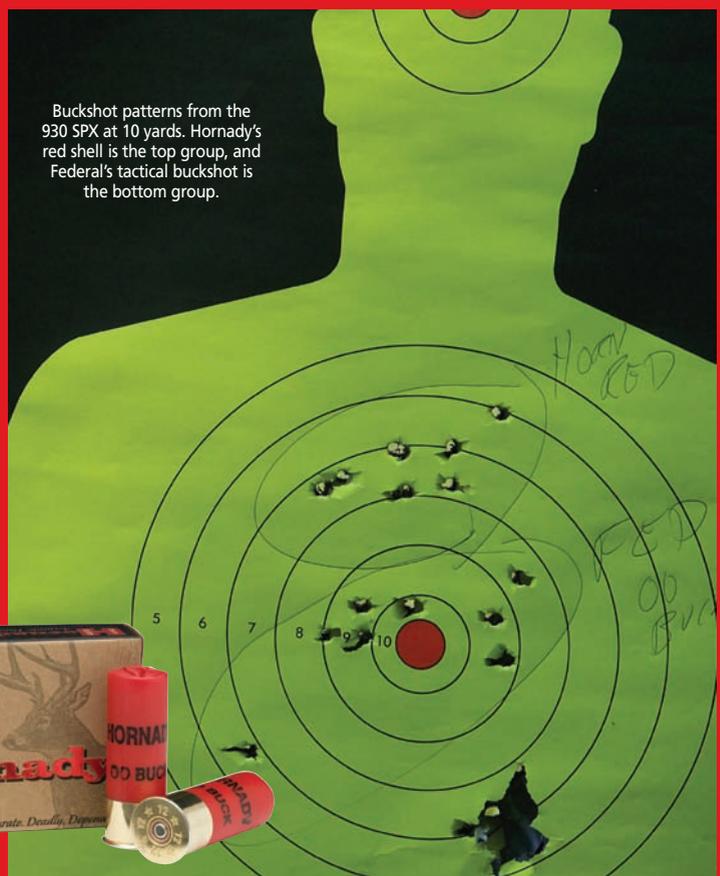

To test and see just how much penetration I could get from a birdshot load I went to my local grocery and purchased some meat. Fortunately, the butcher had packages of pork neck with bones and meat for a good price. (I couldn't bring myself to shoot up a nice piece of steak).

The meat target I created was secured in place with cellophane wrap on a cardboard backing. The density of the meat varied from 1.5 to 2 inches with bone mixed in. From a distance of 5 feet I fired a single round of #7 1/2 birdshot. The force split the cardboard and knocked the target over. Upon closer inspection I discovered that the meat had completely absorbed the majority of the shot. A few tiny pellets punched through the cardboard around the meat but none passed through.

What does this translate to?

At near contact range, a mere 5 feet, the #7 1/2 lead shot did not have the power to penetrate two inches of flesh. There is no way the shot would have reached deep inside an animal or human to shut down the heart, lungs, or central nervous system. Surely the wound would be horrible, but self-defense is not about inflicting horrible wounds, it is about stopping the bad guy from killing us.

The moral of the story is quite simple actually. When it comes to saving your life from a deadly predator, buckshot and slugs are where lethal power lies. Save the bird shot for the doves and squirrels.

Buckshot patterns from the 930 SPX at 10 yards. Hornady's red shell is the top group, and Federal's tactical buckshot is the bottom group.

TRAINING COURSES

BLACKWATER
worldwide

Develop skills that will enhance your chances of survival during hostile encounters.

Blackwater offers the most comprehensive private tactical training facility in the United States. At 7000 acres, our Moyock, NC headquarters offers a 3 acre urban training area, 4 ballistic live fire shoot houses, 3 tactical driving tracks, 22 state of the art flat ranges, 2 known distance sniper ranges and a 10 acre private training center. In addition to our core offerings that range from basic firearms training to advanced tactical training, we design custom courses specifically tailored to meet the needs of the customer.

Along with our satellite training site at Mount Carroll, IL, both centers not only provide safe and realistic training environments, but are complemented by a staff of professional instructors with military and/or law enforcement expertise, which allows for the most comprehensive training available for government, military, law enforcement and competition oriented customers.

At Blackwater, you can train, eat and sleep at one facility.

Make plans to bring your team, unit or just yourself in 2008.

Team Mossberg Takes On Blackwater

Brutal. Simply brutal. Stepping out into the parking area of the Norfolk International Airport, I was greeted by stifling heat and humidity you might expect during mid-June in Virginia. Despite the temperature, I was in an upbeat mood as the airlines had not lost my bag, and I was soon to be among friends. But the word “brutal” would still set the tone for the next week.

Along for the trip were fellow gun scribes Greg Rodriguez, Patrick Sweeney, and Pete Angle. Including myself, we would be “Team Mossberg,” at least for the week. We were all brought together to work with the various Mossberg Special Purpose shotguns, including the brand new 930 SPX and 930 Tactical. These particular autoloading 12 gauge shotguns were being unveiled for the first time. Pete Angle, of NRA’s American Rifleman Television show, brought a crew to help us record the event.

Those in the audience who know their shooting school geography will have already figured out that Blackwater USA is only a short drive from the Norfolk-Virginia Beach area. Jim Sierawski, V.P. of Blackwater Training, would be our host at what is the world’s largest privately owned training facility.

Blackwater covers some 7,000 acres in rural North Carolina. The corporate headquarters is in Moyock as are Blackwater’s Aviation, K-9, Construction, and Driving Schools. And, of course, there are elaborate first-class ranges from 50 yards out to 1200 yards to hone your craft.

Blackwater has a fine corps of instructors and they put us through numerous training drills. They worked us hard. We shot during the day and night, from around barricades and cover, at multiple targets, on the move, and even in the rain at one point. Using specialized Mossberg breaching guns we blew locks and hinges off doors. We even formed our own Team Mossberg entry team, practicing over and over (with live ammunition, mind you!) just like a professional team would do. There’s simply nothing that compares to that.

During our time at Blackwater we consumed thousands of rounds of 12 gauge ammunition. The 930’s all ran like champs cycling buckshot, birdshot, slugs, and breaching loads, as did the Model 500 Special Purpose guns. We left the range each night tired, sweaty and dirty but it was a good sweat and the weariness was well-earned. The toll on our bodies was brutal — but in the best way. For while we have all since returned to our own parts of the country, for that moment in time we were “Team Mossberg” and together shared an experience that I, for one, will carry with me for the rest of my life. — Paul Markel

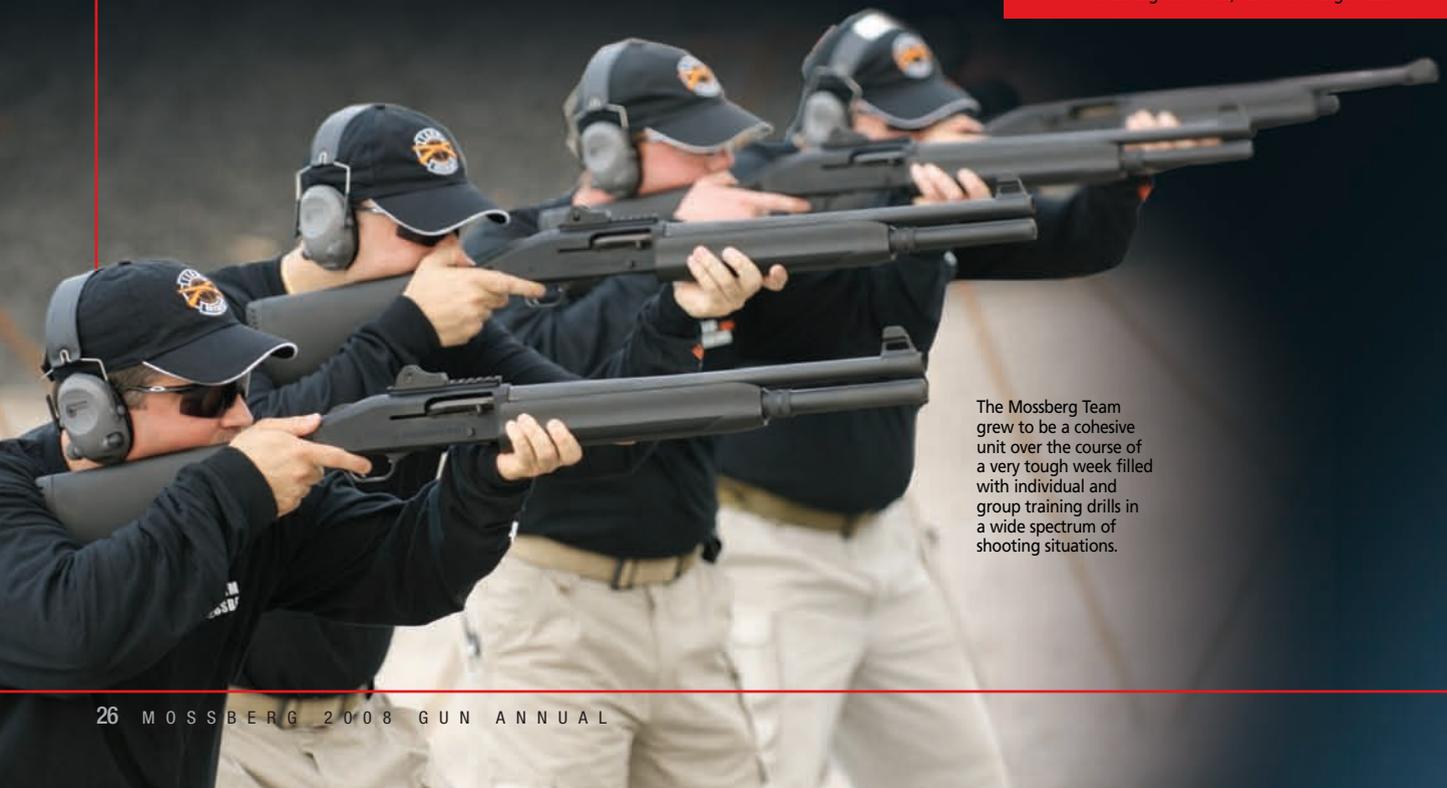

The Mossberg Team was prepared with a variety of Special Purpose models to work with.

Blackwater instructors review procedures excessively during the entire week’s action.

Thousands of rounds were shot through the 930s during the week, without a single failure.

The Mossberg Team grew to be a cohesive unit over the course of a very tough week filled with individual and group training drills in a wide spectrum of shooting situations.

The full fury of the 930 SPX is on display at the indoor shooting range.

Besides first-class shooting facilities, part of the Blackwater experience is access to real-life "toys."

Automotive course exercises include hostage avoidance and rescue, and border/checkpoint security.

The Mossberg (Entry) Team prepares to breach a doorway with a little help from a 930 Tactical.

Drills covered dozens of shooting situations, to fine tune individual skills.

Team members from left: Paul Markel, Greg Rodriguez, Patrick Sweeney and Pete Angle.

Team Mossberg poses with some of Blackwater's excellent instructor corps upon arrival to the complex.

NYPD & MOSSBERG THE BIG APPLE PICKS THE 590

Law enforcement trends in guns and gear have always trickled down from the largest to the smallest agencies. As for metropolitan police organizations, the New York City Police Department, of simply the NYPD, is one of the most influential in the nation.

With more than 36,000 officers, the NYPD has more men and women in blue than the total population of the city I reside in. With an employee pool that large, equipping them is truly a monumental task that the NYPD has always taken very seriously.

When this enormous agency transitioned from the double-action revolver to the semi-automatic pistol, it did so only after extensive and laborious testing.

The Department now authorizes only a few select auto-pistols, with the GLOCK 19 being the most prevalent model in service.

TESTING AND EVALUATION

The largest police agency in the nation is not going to write a check for thousands of new shotguns without an extensive and torturous testing period. Taking models from the top shotgun manufacturers, members of NYPD's Firearms & Tactics Section began a series of extensive tests nearly two years ago.

Recently, I was able to speak with Detective DeRespiris, the NYPD

detective in charge of research and development, and he was kind enough to take time out of his busy schedule to answer some questions and elaborate on the testing procedures.

The evaluation process basically consisted of two phases. During Phase One the Firearms & Tactics Section instructors mimicked the original military specification test. They fired 1,500 slugs and 1,500 00 Buck for a total of 3,000 2-3/4 inch shotshells. The Mossberg 590A1 passed this first test with no problems.

With the initial testing completed, the process entered Phase Two, which consisted of daily use by actual street officers from the NYPD. As a part of their regular firearms training, the patrolmen were issued Mossberg 590's and duty ammunition, which they then ran through various exercises.

During that test period, approximately 12,000 rounds of ammunition had been fired. Again, no functional problems whatsoever.

As for ammunition, the NYPD uses Federal duty ammo in both slug and 00 Buck. I inquired as to whether any "torture" testing was done. Rather than institute artificial conditions, they instead subjected to the guns to one of the toughest tests possible: everyday police use. No doubt, that's the toughest test of all.

B Y P A U L M A R K E L

The 590 model shown here incorporates many of the specifications found on the version selected by the NYPD.

THE NEW NYPD 590A1

During the trial period, members of NYPD's firearms unit came up with a specific list of characteristics and accessories that they wanted on their duty guns. The result of that input is the new NYPD version of the Mossberg 590A1, which of course is built around the basic 500 pump — tens of thousands of which are in service with law enforcement agencies both here and abroad, and of course by the U.S. Military.

The first major item the NYPD specified for its pump-action 12 gauge shotgun was a 14-inch barrel. Rather than a plain bead, they selected an extremely robust, windage adjustable 3-dot sighting system. The trigger guard and ambidextrous safety are aluminum, and all metal parts are to be coated with a Parkerized metal finish.

As for gun furniture, the NYPD pump gun will have a black synthetic SpeedFeed stock at the rear with a specified 13-7/8 inch length of pull. Up front the guns will have a matching synthetic forearm with Mossberg's new hand strap. The hand strap option is a good one, particularly for shorter barreled guns. Also required are front and rear sling swivels. The aluminum receiver will be drilled and tapped to accept a mounting rail, which of course gives them the option to add specialized optics to the guns at a later date.

From mechanical standpoint, the guns must have dual-action bars (standard on all 590's), an anti-jam shell elevator, dual extractors, and a six-shot capacity when using 2-3/4" inch shells, but all 590's have chambers capable of accepting 3" shells.

As for dimensions, the gun will have an overall length of 33.75 inches with an approximate weight of 6.5 pounds. This is nearly 8 inches shorter than the original 590A1, and is .75 lb. lighter. The choice of a 14" barrel was a no-brainer, given the tight space of a police car and the fact that NYPD officers constantly operate in close-quarter environments.

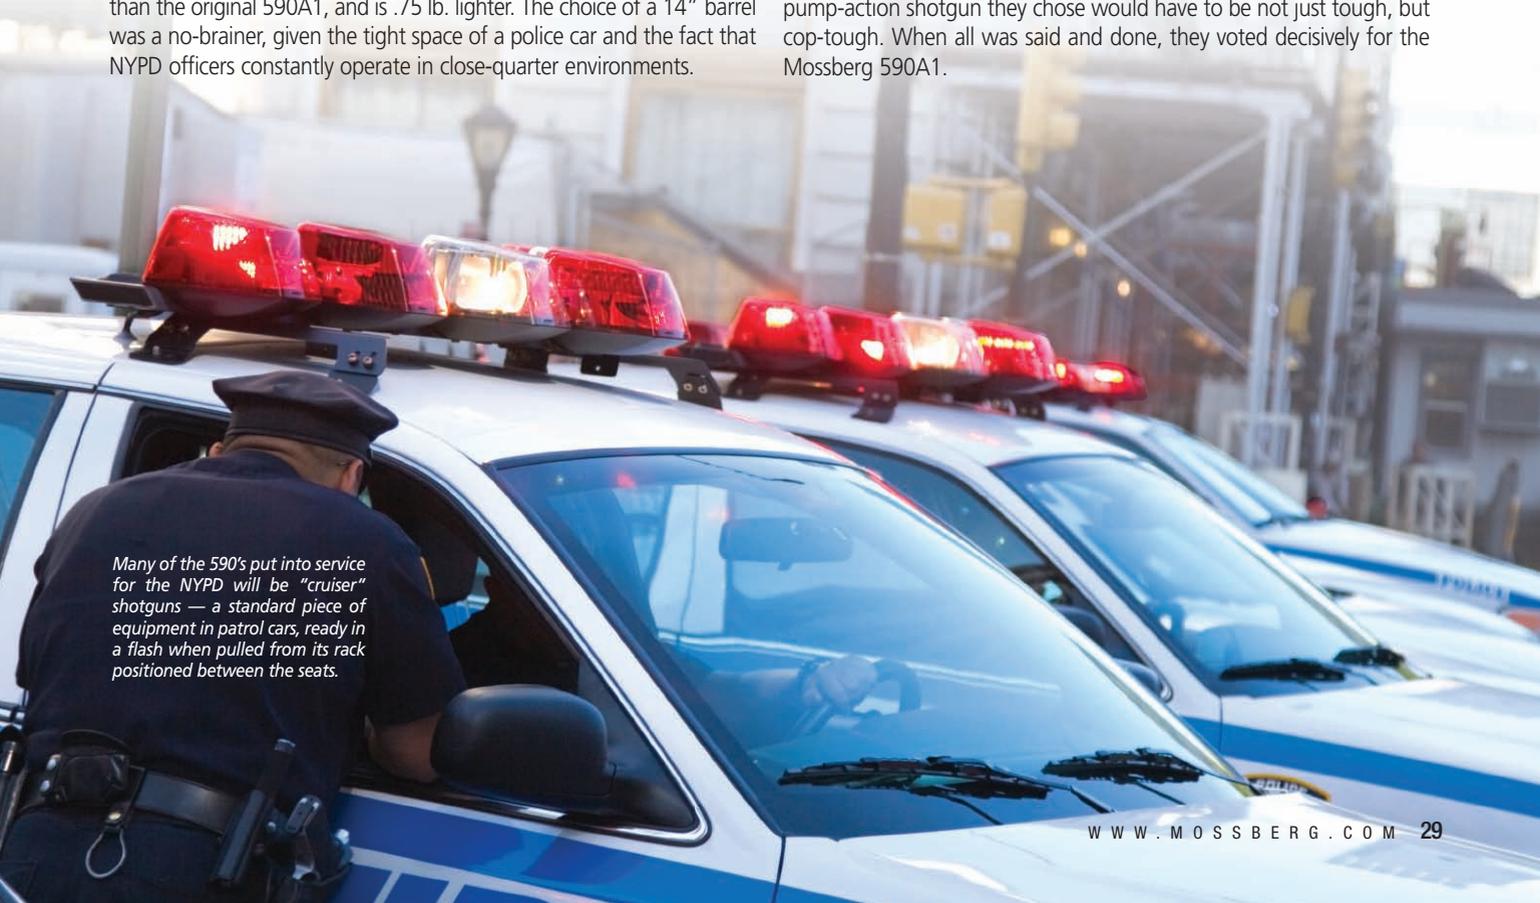

THE MISSION: POSSIBLE

The lion's share of these new shotguns will be cruiser guns; that is, they will spend the majority of their lives locked in a rack between the seats of police cars. These pump guns are going to see some rough service fighting crime on the streets of the Big Apple, and based upon their intense two-year test, the 590A1 will be up to the challenge.

Incidentally, police shotguns are "shift gear," that is, they generally don't belong to any one person, but are shared by the members of that patrol, unit, or precinct. What this literally translates to is that instead of a single person maintaining the gun, you will have numerous people neglecting it. That's just the way it is.

At Mossberg there is a great deal of pride associated with that fact that the NYPD has chosen their 590 as their official duty shotgun, for they do not attach their reputation to a product lightly.

The NYPD Firearms & Tactics Section understood all too well that any pump-action shotgun they chose would have to be not just tough, but cop-tough. When all was said and done, they voted decisively for the Mossberg 590A1.

Many of the 590's put into service for the NYPD will be "cruiser" shotguns — a standard piece of equipment in patrol cars, ready in a flash when pulled from its rack positioned between the seats.

MOSSBERG WORLDWIDE MILITARY CONTRACTS

THE 590: A HISTORY OF SERVICE

Mossberg developed the 590 primarily for the law enforcement and potential military markets. Very similar to the 500, the 590 shares the same receiver and virtually all other features. The primary difference from the 500 is the configuration of the 590's magazine tube. This part can be easily opened for cleaning and is readily adaptable for the addition of an extended magazine tube. The Parkerized metal finish mates perfectly with other military small arms.

Reliability and relatively low cost are features that made Mossberg popular with the civilian market as well as attracting the attention of the U.S. military in the late 1970s. In order to replace the aging Vietnam-era pump guns still in inventory, the government MIL SPEC 3443 was established as qualifications for the selection of a new combat shotgun. Beyond standard criteria such as physical strength tests, performance under temperature variance, and response to chemical agents — the military specifications required sample shotguns to pass an endurance test requiring 3,000 rounds to be fired with malfunctions not to exceed 0.1%.

For those who recognize the astronomical pressures and pounding a 12 gauge load inflicts on the components of a shotgun, as well as the other brutal testing criteria, this was a downright torture test. When all was said and done, the Mossberg 500 and 590 were the only shotguns that met or exceeded all the requirements — a testament to American-made reliability.

This is also attributable to Mossberg's straightforward design and the guns' uncomplicated nature. The fewer moving parts, the fewer problems you will have in the long run. That, combined with quality workmanship and first-rate components translates to a tough, reliable, pump-action shotgun.

Despite the "military" features available on the 590 (extended magazine tube, bayonet lug and ventilated metal handguard), the initial government contracts, and most subsequent government contracts for Mossberg shotguns were for the 500 with 18" or 20" barrels and a 6-round total capacity (five in the magazine and one in the chamber).

There have been several variations over the years; however, the heart of the venerable Mossberg 500 system has remained unchanged.

Most, but not all of the military contract Mossberg shotguns have aluminum trigger guards and safety buttons, while the civilian production (and some military) guns generally possess the same components made of a tough polymer compound.

Many of the military contract versions also have heavy-walled barrels and are fitted with sling swivels. The early military contract 500 shotguns were made with wood stocks and forends but by 1987, these were almost entirely replaced by synthetic stocks and forends, as was found on the 590's.

A FIXTURE FOR THE U.S. MILITARY AND ARSENALS WORLDWIDE

All four branches of the United States armed forces have purchased Mossberg shotguns since the early 1980s. Military procurement of the 590 variant was limited primarily to the U.S. Marine Corps and the weapon became popular soon after being introduced into USMC service.

As related in an article in *The Gun Digest Book of Assault Weapons*: "... In recent years, Marines have come to appreciate the value of a reliable shotgun for security purposes. Military and naval bases are seldom in isolated areas as once was true, and populations have grown up around them... This has made the shotgun the preferred security defense firearm at home and overseas. It is effective as a counter-threat weapon and less threatening beyond short ranges.

Most training officers are aware of the intimidation effect, which a man or woman in uniform and armed with a shotgun can command. The mere appearance of the gun or the sound of a round being racked into the chamber usually will give pause to those disturbing the peace or committing a crime. Good training and discipline go far toward effectively utilizing this deterrent value... At the Virginia training base, the new Mossberg has been found nearly 'Marine-proof.' Many of the guns have had more than 10,000 rounds fired through them, far exceeding the current military specifications for shotguns. The Model 590s have held up to the punishment."

THE WAR ON TERROR

While the rifle has been the primary weapon of the soldier for the better part of two centuries, there have been several instances in the history of warfare where the shotgun has shined. Many years ago a Marine Vietnam veteran related his experience with the pump shotgun to me. The man stated that with all the noise of combat, rifles and machine-guns, grenades and rocket launchers, the shotgun had its own distinct sound. "When you heard a shotgun fire," he said, "you knew someone just got screwed up."

Today, our armed forces are once again in a situation where the merits of the shotgun have brought it back to the limelight. Rather than being assigned merely to guard duty or sentry work, the Mossberg 500 and 590 are going into the "hot zones."

An illustrative passage in the book, *Mossberg – More Gun for the Money*, reveals the durability of the 590 during Operation Desert Storm in the early 1990s: **"...Operation Desert Storm veterans have...practical tests to report — including firing the 590 without fear of malfunction after it had spent the night buried under sand. The 590s proved their worth after just shaking the sand out and very little cleaning. Definitely not the recommended maintenance for any mechanical equipment, and the kind of tribute that brings a wince to any armorer."**

In addition to their obvious anti-personnel role, pump guns are widely used as breaching tools. The U.S. Army and Marines recognized this benefit in the early days of the Middle Eastern conflict, and began retrofitting their guns with pistol grip stocks or pistol grips only.

Seeing the need, Mossberg has stepped in with specially designed compact breaching guns. These pump guns include the most important feature a breaching gun needs — a stand off. The stand off is essentially an extra large muzzle brake with generous ports to safely vent off the gas from a breaching shell. Mossberg also offers the

An important feature on many of the current generation of Mossberg Special Purpose shotguns is the stand-off style barrel used for door breaching.

more compact 500 with either a pistol grip only or six-position retractable stock with spare shell holder.

With its rock-solid reputation and decades of proven reliability, Mossberg has become the choice for the modern combat shotgun. Both in the United States and overseas, in hard-use environments such as Afghanistan and Iraq, front-line U.S. Army and U.S. Marine Corps units are relying on the 500 and 590 shotguns. The weapons have proven their worth, time and time again, in the deadly serious duty of fighting the foes of freedom. Mossberg shotguns will undoubtedly be in the hands of U.S. military troops for many years to come...their lives depend on it. ■

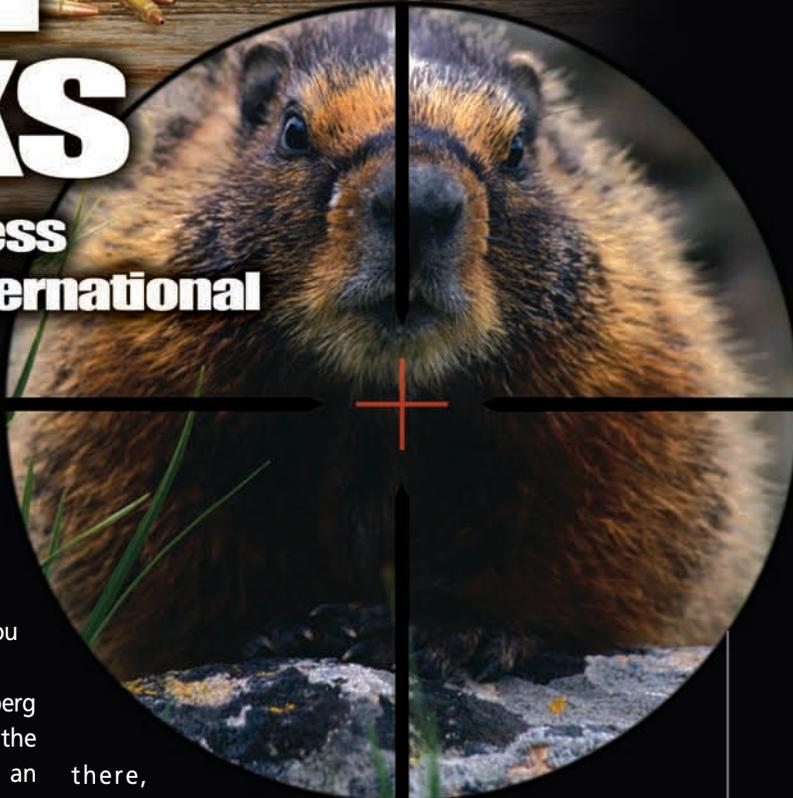

Huntin' Chucks

Varmint Hunting Success With The Mossberg International 817 Bolt-Action

Chances are that if you are just getting into the shooting sports, you'll find big game hunting to be quite expensive. Even if you stick to regional hunting outside your state, the cost of gas, oil, motels and an outfitter or guide can run up a tab faster than a bullet heading downrange. One option for anyone on a budget is the year-round sport of varmint hunting, especially if you start out with a reasonably priced rimfire bolt-action rifle.

Such a rifle came to the forefront recently from Mossberg International; it's called the 817, and it's chambered in the exciting .17 HMR (Hornady Magnum Rimfire). With an MSRP of around \$160 for the blued version and \$175 for the brushed chrome finished gun, it is truly a bargain in today's firearms market.

As a young whisker, chasing chucks with a rimfire single shot rifle was as normal as rain on the family farm. My boyhood buddy Jimmy and I patrolled the fields like two Huckleberry's with nothing more to do than fish in the brook, stalk chucks and lay around wondering what working for a living was going to be like! We'd leave in the morning with a box of .22 Short's and stalk the barn for those cat-sized barn rats. From

there, we'd move down the lane road to the brook and look for chucks coming in for a morning drink.

Later in the day, we'd move up the hill from the lower pasture taking aim on unsuspecting woodchucks with .22 long rifle ammunition when they came out for their evening meal. Those days taught me the right and wrong way to stalk, how to dope the wind, and the limits that were imposed on both ammunition and my shooting ability.

Today, things have certainly changed. In the northeast where

B Y S T A N T R Z O N I E C

(Left) Right out of the box, this new addition to the Mossberg line is meant for business. Out of the stock, the Mossberg Model 817 is a well engineered unit with the trigger assembly, magazine and safety all in one package. (Center) From the left side, the receiver is streamlined for the times with the Mossberg name proudly attached. (Right) To protect the shooter from eye damage, a vent has been machined into the front part of the receiver. Notice the attention to the details and the fine overall finish for a gun with this low price point.

I live, coyotes have decimated the chuck population, making the pasture poodles more wary and attuned to his surroundings. Instead of woodchucks building dens in the middle of the field, they now reside in thick hedgerows, roadside ditches, and in the woods where there's more protection. Because farmers don't cut hay in these areas, the grass grows tall and provides concealment for the chuck. What this means for the eastern hunter is that these varmints are harder to find, and when you do, shots are often offhand and at close range.

Enter the 817 Bolt-Action Rimfire. Chambered for the .17 Hornady Magnum Rimfire (HMR), the 817 is designed and built to be a working-man's rifle. The barreled action is set into a rugged synthetic stock. There are no iron sights provided, but Weaver-style bases come factory-installed with the gun and thus facilitates convenient scope installation.

The general lines and proportions of the 817's stock did impress me. First, it is seemingly perfectly fitted for just about any adult shooter, so I had no trouble holding or aiming the gun from the off-hand position. There is no Monte Carlo comb or cheek-piece on the stock, which I don't miss at all, as my eye lined up perfectly with the scope. There's an ample amount of diamond-point checkering to provide a good grip.

To add somewhat of a European flavor, the 817's forearm ends in a schnabel tip, lending a distinctive look that separates this rifle from the rest of the pack. Behind the schnabel the forearm widens out, offering more purchase for the weak (left) hand. Again, molded-in checkering offers a non-slip surface

regardless of weather conditions.

Moving on to the receiver, you'll find a large ejection port, so clean ejection of spent cartridges should never be a problem. Under the front receiver bridge is a safety vent hole in the unlikely event of a case failure. Should that happen, harmful gases are vented away and to the side of the shooter. The complete receiver is satin polished and deeply blued with the identification "Mossberg Int'l. 817" emblazoned in silver on the left flank. The rear of the receiver is uniquely cut and reminds me of the profile found on past Mossberg Model 810 centerfire rifles.

The bolt is of common rimfire design and similar to many others on the market today. However, you will find on the bolt face a novel set of spring-like extractors combined into a C-spring that slips neatly around the bolt. The one on the right is claw-like in appearance and hooks the rim of the case. The one on the left looks like another extractor, but is actually a tensioner that aids in the spirited ejection of spent shells.

The "floorplate" is a combination of a magazine well, safety and trigger guard. The magazine fits neatly into this unit and holds five rounds of .17 HMR ammunition. The magazine itself was designed to extend past the floorplate, which then makes it easy to grab when you want to reload or change magazines.

Yet another interesting feature is the way this magazine is tapered towards the front. This not only gives it a stylized appearance, but the taper makes it less likely to get hung up in thick brush. For teaching up-and-coming young hunters,

(Left) When the 817 is ready to fire, you'll see a red flag on the cross-bolt safety noting the gun is ready to go. (Center) The Mossberg 817 magazine holds five rounds of the hot .17 HMR rimfire round. At 2,500 feet per second, this round is a varmint's worst nightmare. (Right) Directly behind the magazine is the magazine release. Pushing it forward with the right hand drops it conveniently into the left hand. The magazine snaps cleanly into the "floorplate" and is tapered as not to snag on the underbrush while hunting.

The 817 is available with brushed chrome or blued barrel finishes.

you can load the gun with a single round for educational purposes and it works just fine. Behind the magazine is the release, and pushing it forward drops the magazine into your hand. I'm especially fond of this system, as even with an empty magazine it drops smartly into your palm. The safety is cross-bolt in design and is traditional in operation. Push it to the right blocks the sear, yet you can still work the bolt to remove a live or spent round from the chamber. Moving it to the left allows the gun to be fired. The trigger was surprisingly good, especially when comparing to competitive models out there, breaking at 3.25 pounds.

For testing I mounted a Bausch and Lomb 1.5X6mm scope with Talley rings. Since the Weaver bases are already included in the package, it was a simple matter to bore sight the scope at home and head out to the range. Chambered for the high stepping .17 HMR, this cartridge certainly has a lot going for it. If you compare it to the best "hyper" .22 Long Rifle cartridge like the Stinger or Yellow Jacket, the .17 HMR walks away with an impressive 46% gain in velocity, and 28% more muzzle energy.

While those specs may sound impressive, my personal slant on this round is that I would not try and take woodchucks much beyond 75 yards. Keep in mind that this case is loaded with a tiny .17 caliber bullet and too many variables like wind, body mass, trigger jerk or a bad estimation of distance on your part can wound the animal. No creature deserves that.

SPECIFICATIONS

Rifle Model:	817
Action:	Bolt-Action
Stock:	Black Synthetic
Caliber:	.17 HMR
Magazine Capacity:	5 rounds
Barrel Length:	21 inches
Overall Length:	39.75 inches
Sights:	None furnished, Weaver bases come factory installed
Weight:	4.25 pounds
Barrel Finish:	Blue or Brushed Chrome

For a first look at the newest 817s — including wood stock and varmint bull barrel configurations — see Page 88.

Using ammo from Hornady and CCI, five shot groups averaged just over an inch at 50 yards, with the Hornady load coming in dead-on at an inch.

I packed the little 817 along with a couple of other guns I wanted to field test and headed into what has always been pretty good woodchuck country in upper New York State. My friend Ed came along and we put in a good day in the hay fields, but it was one of the hottest days of the year and we only saw a few critters. We did manage to get all but one of those, and the 817 did its share. It earned a well-deserved thumbs up from both of us. It's a great gun for both veteran and novice alike and a helluva value — you can take that to the bank. ■

(Left) While the extractors may look simple, they are rugged enough to last for years. Built on spring steel the author had no trouble with the gun feeding or ejecting any round. (Center) At 50 yards, the Mossberg 817 with Hornady ammunition shot one-inch groups. Considering the gun is not even broken in yet, groups should get smaller as more rounds are put through this new rifle. (Right) Author Trzoniec is shown here with one of several chucks bagged with the 817 in the hills of upstate New York.

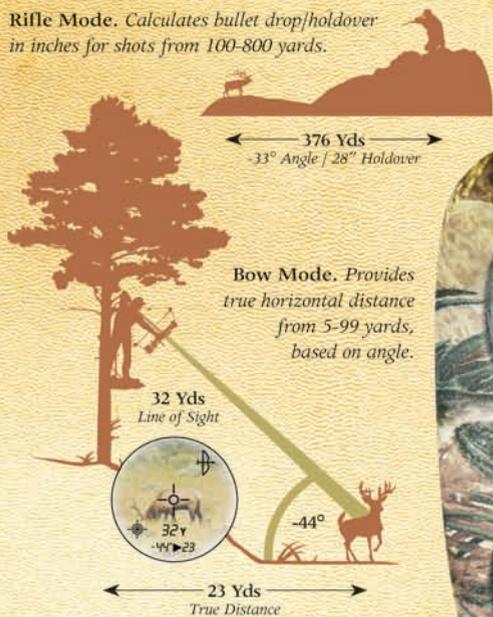

SCOUT™ 1000 WITH ARC

Levels more than just the playing field.

It does the math. Just squeeze the shot and I remember your knife. Amazingly compact and simple to use, our new Scout™ 1000 with ARC figures distance based on terrain angle, to give you an accurate "shoots-like" distance to 1,000 yards. In Rifle Mode, it even tells you where to hold. All with the tap of a button – in a unit small enough to fit in your shirt pocket.

Rifle Mode. Calculates bullet drop/holdover in inches for shots from 100-800 yards.

INTO THE GREAT WHI

THE QUEST FOR BIG GRIZZ

BY GREG RODRIGUEZ

Several days of bad luck, horrendous weather and the torture of sub-zero temperatures made those 12-hour days snowmobiling in search of the elusive prey seem like hell on earth. The abuse of body and mind would all be worth it—for a chance to fulfill that childhood dream—and face down the most dangerous and feared land dweller in North America.

TEN NORTH

Like many hunters, I've dreamt of taking a massive, blond-tipped grizzly bear since I was a kid. I've hunted them before, but never successfully. Once, in British Columbia, I carried a tag on a moose hunt but never spotted the distinctive claw-dragging tracks of a brutish bruin. A year later, I spent 17 days in those same mountains and took two fine Black bears, but once again saw nothing *ursus arctos horribilis*.

A few months later, outfitter Virgil Umphenour of Hunt Alaska called to tell me about a very special spring grizzly hunt he conducts each year in the Arctic. Virgil and his crew of Athabaskan Indian guides use snowmobiles and snow shoes to cover his huge area where they climb ridges and glass for bruins feeding or basking in the sun as the spring thaw draws them out of hibernation.

It sounded like a fun and exciting hunt and Virgil boasted the high success rate I was looking for, so I booked a trip for the coming spring.

PREPARING TO TAKE ON THE ARCTIC

With its synthetic stock and all-weather Marinecote finish, the Mossberg 4x4 was the perfect choice for the unique and daunting conditions encountered for an Arctic grizzly hunt.

In the arctic, where frost bite and frozen firing pins are regular occurrences, inferior gear can get you in a lot of trouble... even killed. Cheap gear can lead to frostbite, with the result being anything from mild discomfort to lost limbs. And a frozen rifle isn't much good at stopping an angry grizzly bear hell-bent on making you his first Spring meal.

In preparation for my hunt I spent a great deal of time researching the right gear to withstand the rugged arctic conditions. I bought a lengthy list of gear, including UnderArmour long johns, a heavy down sleeping bag from Cabela's, and an arctic weather suit from the folks at Northern Outfitters. Truthfully, selecting the right clothing was a breeze with a little help from trusted friends and Mr. Google.

But choosing the right rifle was even easier. I knew the wet conditions required a synthetic-stocked rifle with a weather-resistant finish. I also knew my rifle needed to be chambered for a cartridge that was

flat-shooting enough to reach out to 300 yards with precision and still have enough energy to get the job done. It so happened that I'd just finished testing Mossberg's new 4x4 bolt action and was impressed enough with it that I decided that would be the rifle I'd use. The 4x4's rugged synthetic stock and weather-resistant Marinecote finish were perfectly suited to the harsh Arctic clime. Its .338 Winchester Magnum chambering was also perfect, offering enough reach and power to get the job done to 300 yards and beyond.

As an added bonus, it proved to be the most accurate .338 Winchester Magnum I've ever tested, producing groups as small as .39" with my chosen load – Federal's 210-grain Partition. In fact, I was so impressed with its accuracy that I bought the test rifle.

Over the next few months I caught a bit of flack from some of my snobbier friends over my choice of rifles. "Why," they asked, "would you trust your once-in-a-lifetime hunt to such an inexpensive rifle?"

Truth be told, their questions did give me pause, but I didn't let that change my mind. After all, that rifle was a tackdriver, and its all-weather features were exactly what my Arctic hunt demanded. What else did I need?

SUCCESS AT LONG LAST

My hunt started in the Alaska Range where I covered hundreds of miles in the course of a week without seeing a thing, so Virgil's son, Eric, suggested I catch a plane and move to Virgil's other bear camp.

The handy detachable box magazine provides reliable feeding and simple loading and unloading in the field.

The next day I flew into the little village of Kaltag, where spring had come early. The snow that was supposed to provide the necessary cushion for easy traveling on our snow machines was largely melted. What was left was a mushy mix of mud and slush. My guide expressed relief at the sideways snow that began pouring down on us as we began the 36-mile ride towards camp.

It was a rough ride so on arrival at the new camp I fired my rifle over the snowmobile seat to check my zero. The long journey had knocked it off a bit, but a few clicks to the left brought me right where I needed to be – an inch-and-a-half high at 100 yards. My last two shots went into one hole, so I re-cased my Mossberg and started sorting the rest of my gear.

The next morning didn't bring the weather we had hoped for; heavy cloud cover would keep the bears snuggled in their dens. The other hunters in camp weren't too optimistic about our chances either, but since you can't shoot anything from your sleeping bag, we saddled up and roared out of camp on our snow machines. That day

was a bust, but the next morning broke bright, clear, and promising. The change in everyone's mood was marked. The guides were laughing and joking, and soon their optimism wore off on the rest of us. Tommy, one of our helpers, confidently predicted that we would score that day. "It's a beautiful day, boys. We'll get a bear today," the stocky little guide assured us.

We raced across the virgin powder carving fresh trails as we went. It didn't take long before we arrived at a promontory that offered a good view of several valleys. We glassed each one methodically for tracks or the sign of a recently-excavated den.

Before long one of the guides saw a nice set of tracks leaving a freshly-abandoned den. As my luck would have it, though, my friend Mark Scheurer and his guides spotted them before we had and had already begun a stalk.

We were long gone by the time Mark and his crew caught and eventually shot that bear. We rode over a hundred miles that day and glassed until our eyes burned, but we didn't see a thing besides Mark's guides skinning out a beautiful blond bear on the side of a mountain in the distance. Tomorrow, I thought, yep, tomorrow will be my day.

Swivel loops attach to the holes that are molded into the stock, negating the need for threaded studs. It also eliminates "swivel squeak."

Weaver-style two-piece scope bases are factory installed on all non-rifle sight models for quick and easy optics installation.

The 4x4's fire control system is contained within a very sturdy, thick-walled aluminum housing.

The Mossberg 4x4 family has models featuring scoped combos; walnut, laminate and synthetic stocks; matte blue and Marinecote metal finishes; and calibers ranging from .25-06 Rem. to .338 Win. Mag.

The author with the magnificent inland grizzly he took with his Mossberg 4x4 rifle—so magnificent in fact, that it qualified for the prestigious Boone & Crockett record book.

We got a late start that next morning, but my guides weren't too concerned about it. In fact, Earl Esmailka, Virgil's chief guide, put his arm around me and told me not to worry. "We're going back to town tonight, my friend. We'll have your bear before lunch."

Once again, we left camp in a fine mood, leaving wild tracks in the pristine powder as we raced towards another vantage point. From there we spotted a set of tracks in each of two adjoining valleys. Tommy, one of the guides, analyzed the tracks for a while before deciding we should go after the bear on the left. He went even farther out on a limb when he promised not only that the bear was still in the little valley, but that it

was sleeping in the shade of a tree!

We rode to the bottom of the valley and dismounted so we could walk in the rest of the way. We hadn't covered 50 yards when Earl hit me on the back and hissed "Bear!"

I dropped to one knee, rested my Mossberg 4x4 on a fallen log, and found the massive bear in my scope. It was ambling straight up the spine of the mountain with that distinctive rolling gait that marks a true monster. I estimated the distance at 350 yards, held accordingly and squeezed.

The first shot rocked the bear, but the heavy slug didn't slow it down. I found it again, swung ahead and touched off another shot, sending it rolling down the mountain in a cloud of white powder. Once I was sure it was down for good, I hurried up the mountain for a closer look.

Walking up on that bear was the most emotional moment I've ever experienced as a hunter. The realization of a childhood

dream was a bit much for me and, truth be told, I was overwhelmed. I asked for some time alone to admire the magnificent bruin.

I was in awe of the bear's size; its head and hump were massive, and its claws were as long as my fingers. Its long, thick, chocolate-colored cape was as deep as the shaggiest carpet, with just enough blond highlights in all the right places. That bear was everything I ever dreamed it would be, even before I learned it qualified for the prestigious Boone & Crockett record book.

Record book or not, taking that grizzly is one of the highlights of my hunting career. It was a physically and mentally demanding hunt that challenged me and my equipment. I was proud that my Mossberg rifle and I

ARCTIC GUN CARE

Rifles require a bit of extra care for Arctic conditions. Wood stocks require extra attention, but synthetic-stocked rifles with good, corrosion-resistant coatings like the Marinecote finish on my Mossberg 4x4 are fairly easy to prepare.

To get my rifle ready for the hunt, I disassembled the bolt, and using Brownell's Cleaner/Degreaser, removed every last bit of oil and grease from the striker assembly, mainspring and cocking piece. Once it was completely dry and free of lubricant, I applied some graphite lube. Graphite helps the parts move freely, but won't freeze up like oil or grease. This simple step will prevent a frozen firing pin from ruining your hunt. I also applied some graphite to the bolt and lug raceways to ensure smoother cycling of the action.

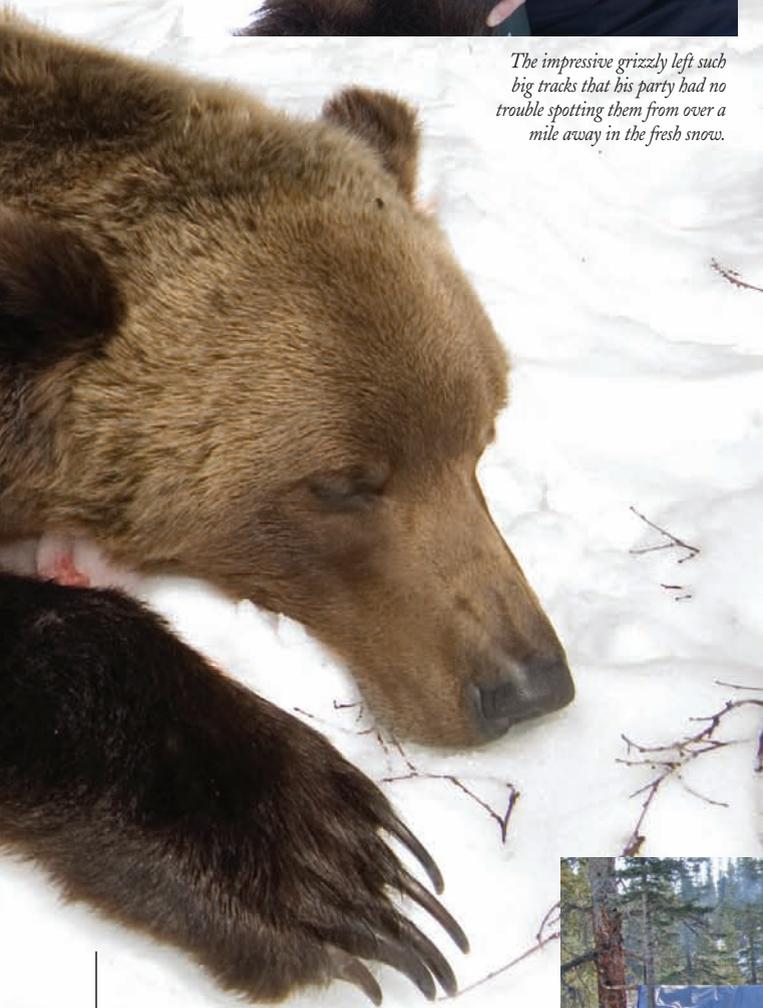

When I got to camp, I sighted in my rifle, then left the gun outside of the tent for the remainder of the hunt. Although I was a bit concerned about a bear coming into camp, allowing my rifle to warm up and then taking it outside would only result in condensation forming on the gun and on my scope. To avoid that, I put my faith in my gun case and Mossberg's Marinecote finish. Neither let me down.

Despite the horrendous weather and the constant soaking by rain and wet snow, my rifle showed no signs of rust or corrosion of any kind.

While you do your best to avoid the elements inside, let your rifle stay outside to maintain a constant temperature. This will avoid condensation buildup on the rifle and scope when switching from warmer to colder temperatures.

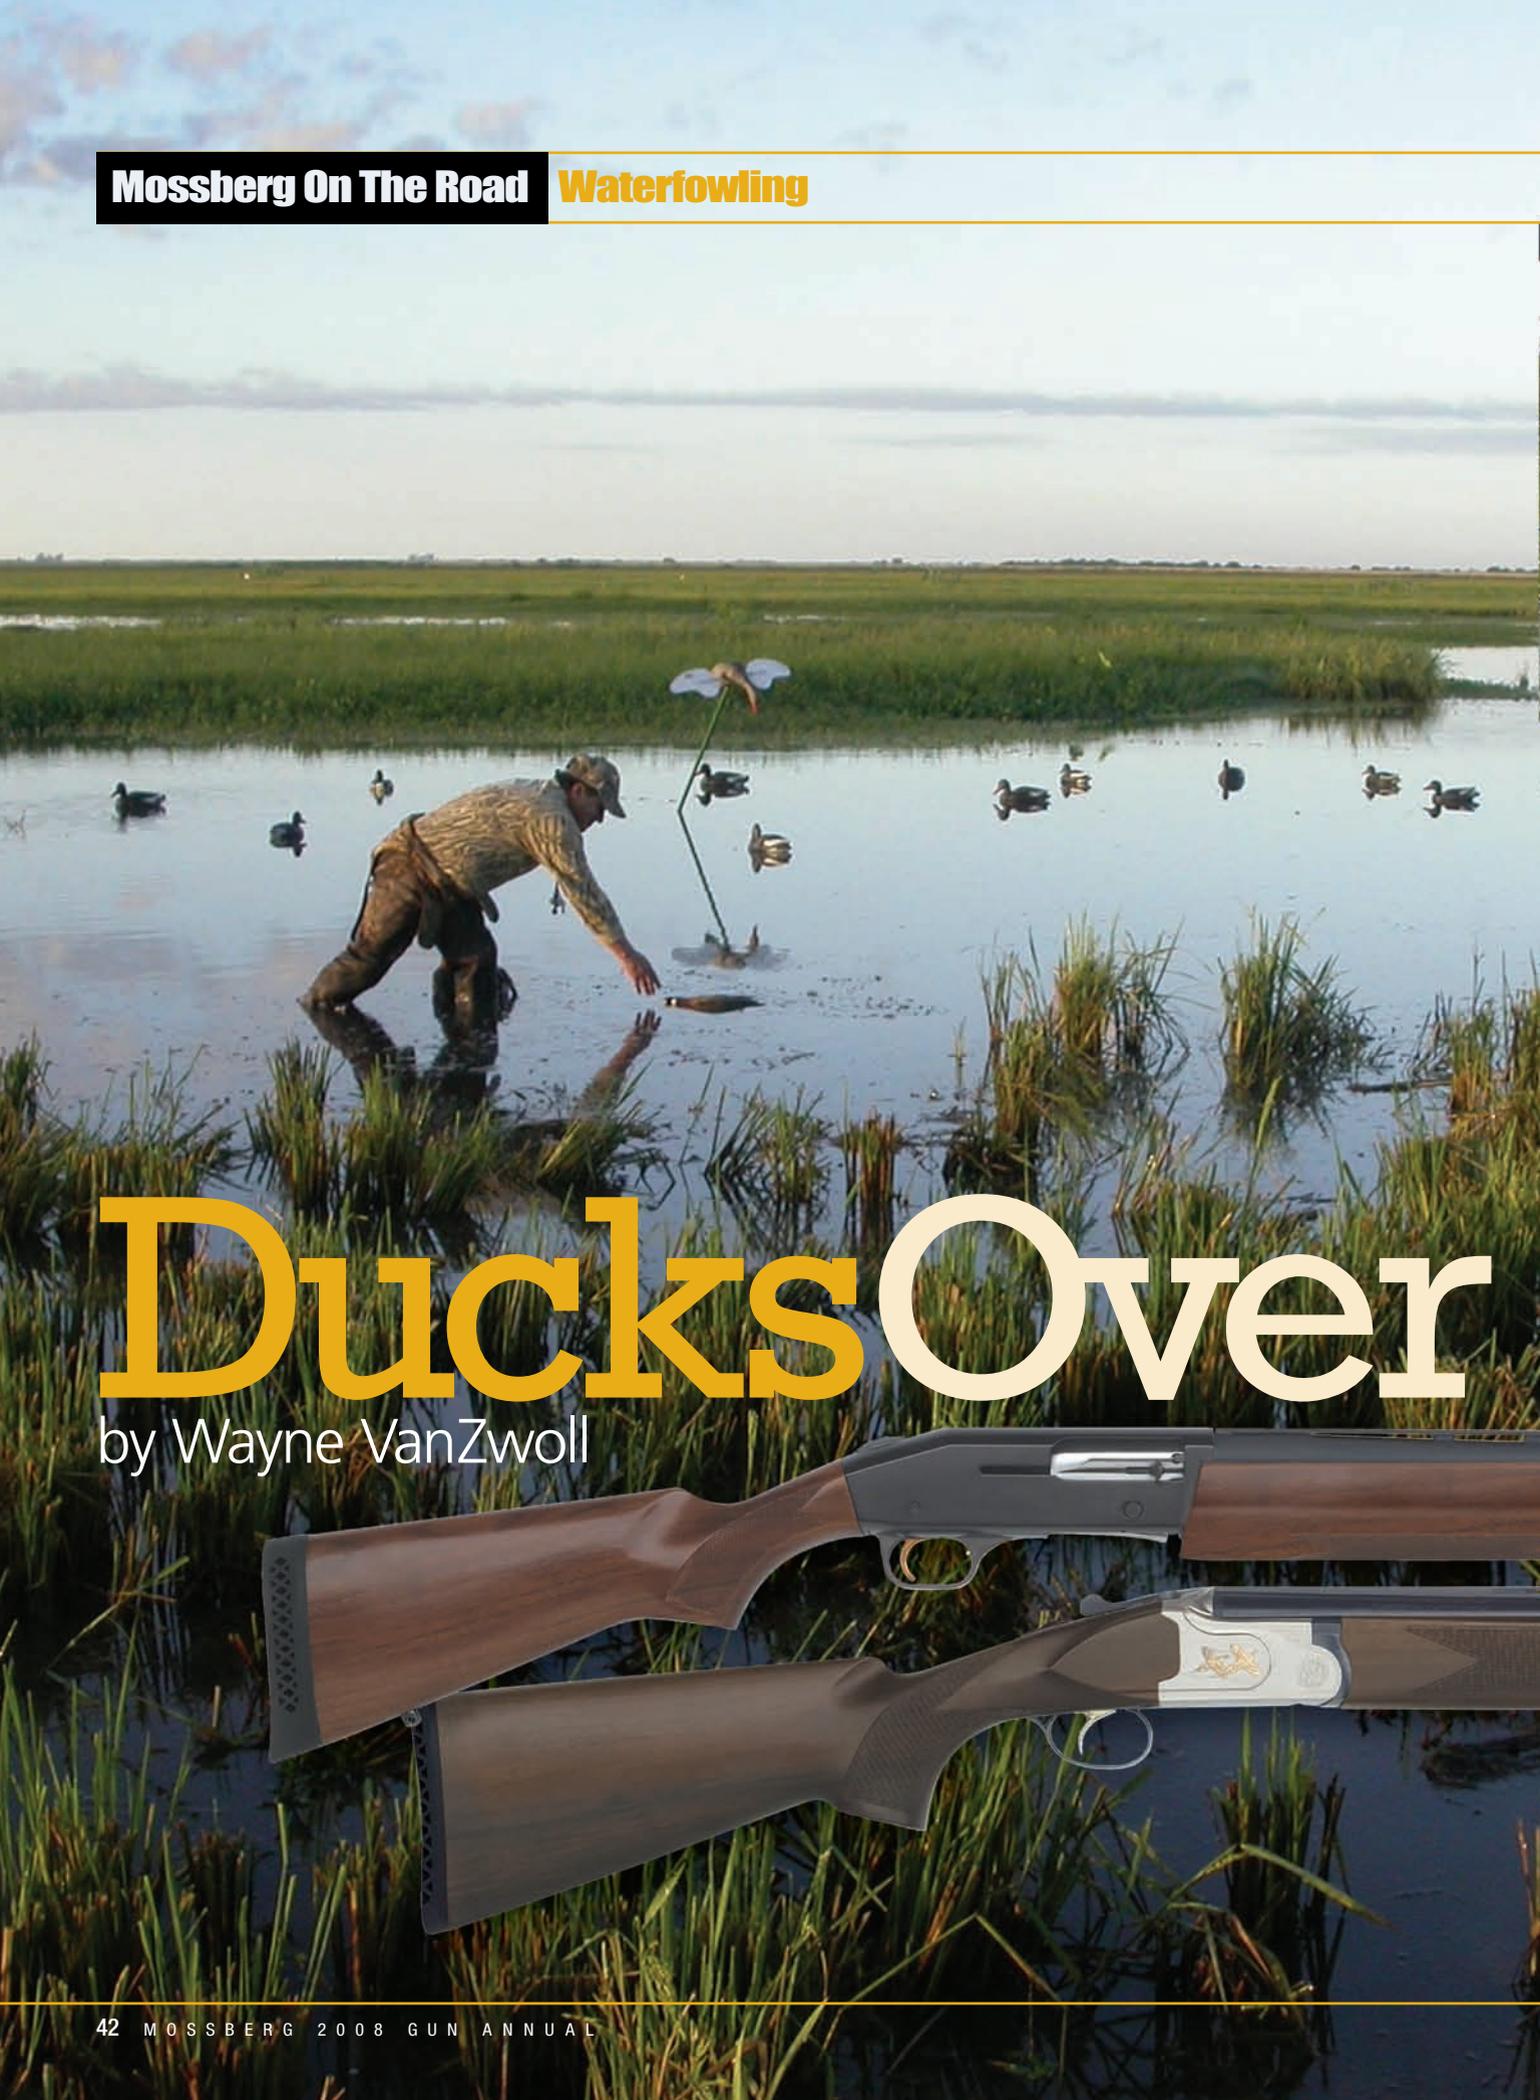

The impressive grizzly left such big tracks that his party had no trouble spotting them from over a mile away in the fresh snow.

were able to endure all Mother Nature threw at us and perform at the moment of truth, delivering an accurate shot under difficult circumstances on North America's most dangerous big game animal — not bad for a flatlander with a rifle that sells for about 400 bucks. ■

The author booked his grizzly hunt with Hunt Alaska (www.huntalaskawithus.com) through Global Adventure Outfitters (www.mbogo.net).

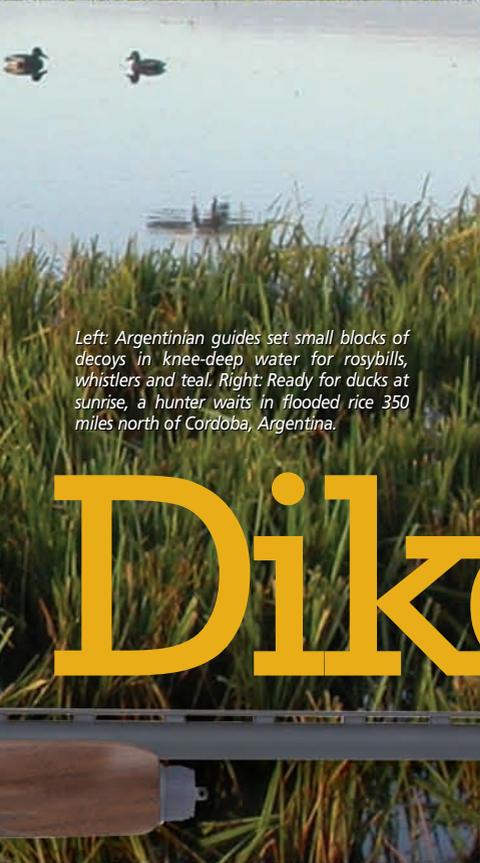

Ducks Over

by Wayne VanZwoll

Left: Argentinian guides set small blocks of decoys in knee-deep water for rosybills, whistlers and teal. Right: Ready for ducks at sunrise, a hunter waits in flooded rice 350 miles north of Cordoba, Argentina.

“Grab your waders!”

Javier shouts.

Then, as an afterthought: “Unless you want to rest.” We could rest. We’ve been airborne and waiting to become airborne for days – or so it seems. It’s been an honest 34 hours reaching Yatay Lodge. Dutifully, I stow duffel and pull on duck gear. Sleep can wait. “Everyone ready?” Young enough to be my child, Javier is an able host, with an effervescent smile and an easy way of taking command. He also speaks perfect English. We pile into the pickups for another hour plying the ruler-straight Argentinian macadam. The sun is already scarlet.

Lamar Underwood, who has edited outdoors writing for decades, draws me as a partner – my good fortune. We chat as our guide Ariel hurls the Toyota north, through flat grassland bearing clumps of brush Texans would call motts. We’re driving to the rice.

“About 50,000 acres,” Javier has told us. “Our concession has 200,000. We use them all in the rainy season. Now just seven of our 80 leased fields offer really good hunting.”

Just seven. But they’re big. As Ariel turns off the pavement and onto the dirt tracks lining long dikes, we motor toward a featureless horizon that meets the sky somewhere beyond where we can see. In dusk’s warm light, waterfowl rise in black columns, jet in squadrons across a deepening sky, then drift like leaves into distant pools. A veritable duck refuge, this lease comprises more acres than we can wade and more birds than we have shells to shoot.

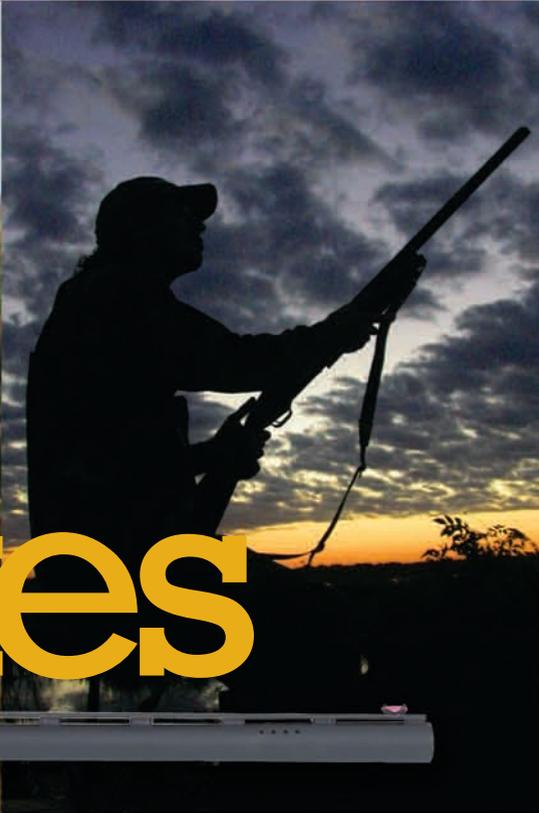

Suddenly, Ariel pulls to the roadside. Brandishing machetes, he and a helper plunge into a thick tangle of saplings and marsh grass. They emerge with armloads of blind material. The Toyota brings us another mile, then stops again by a canal bordering a rice field. Cradling shotguns and stools, I follow Ariel and Lamar up the dike and across a plank bridge. We waded calf-deep through the rice for a few hundred yards it seemed, and arranged the saplings and grass in a screen around the stools. Ariel stakes a battery-powered decoy into the muck – a device I think oddly out of place where rural children still walk to school, gauchos tend cattle and grain is dried by wood-fired furnaces.

Legal light is gone, by U.S. standards. But this is Argentina, where shooting hours and bag limits – 20 ducks in the

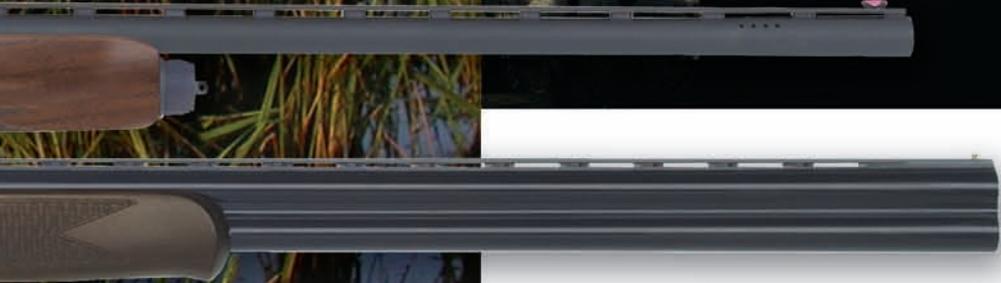

morning and another 20 in the evening, we’re told – favor the hunter. Ariel purses his lips over an ingenious call made of two 20-gauge shotshell heads fused mouth-to-mouth. The whistle is shrill but melodious. We crouch, ready.

Ariel varies his call subtly, playing to several species. Many ducks swing in, few fall, more rise. A crimson ribbon of sky silhouettes birds that zip past faster than we can load. They barrel in from behind, splash into the decoys and swim away. In our haste, we shoot poorly at first.

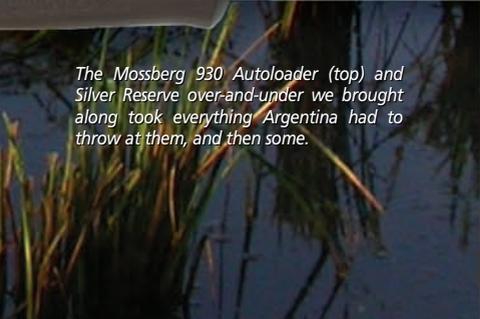

A pair of teal slices in from the north. They’re 15 yards out when Lamar fires. He misses both. Ariel shakes his head. “You must shoot sooner.”

Dikes

The Mossberg 930 Autoloader (top) and Silver Reserve over-and-under we brought along took everything Argentina had to throw at them, and then some.

Top: With an ingenious call made from the bases of two shotshells, a guide beckons whistling ducks. Middle: Blinds are scanty affairs, built from vegetation cut fresh each day at roadside. Note the battery-powered robo-duck. Bottom: Mossberg's 930 autoloading shotguns and Fiocchi ammo are a deadly combination. Doves, pigeons and parrots provide sporty shooting. Farmers welcome hunters with autoloaders!

He's right. But when a whistler follows the teal, I track the bird too long. "Too late," repeats Ariel. It is easy to ride out birds that fly like mallards. But these waterfowl twist and turn like doves, and accelerate as if turbo-charged. Eventually though, we started to get the hang of it

We pick up the stools and decoys as ribbons of moonlight slide between rows of rice. It's 10 o'clock before we sit for dinner at the A-frame. Where beef cattle figure so heavily in the GNP, we expect a good steak. But I've never seen a T-bone thicker than a ream of typing paper! I scrounge an unfired shotshell and place it upright behind the steak. It disappears. The steak tastes even better than it looks. Grilled over a wood flame to a chocolate finish outside, it grades to pink in the middle. It is uniformly hot and tender as the finest filet. You needn't tell this cook how to fix your steak. And you don't dare.

Next morning, we're shooting before sun-break. Fellow journalist John Phillips and I limit easily, in a couple of hours - max. I enjoy hunting, not just shooting, so to prolong the time afield I purposefully let ducks sail by. There's no need to cripple birds here; a skilled caller and spreads as small as a dozen decoys draw them right to the muzzle. The few that plane off into the distance die in the clutch of raptors. I have never seen a greater density of hawks. The lion share of the ducks we retrieve go to local residents, who can typically be found patiently waiting by the shore for the hunters' return in the late morning and evenings.

Our mild ammunition - low-brass Fiocchi loads with an ounce of lead shot - kill reliably when we shoot sensibly. They cycle dutifully through lightweight, synthetic-stocked Mossberg 930 autoloaders. I find this inexpensive and durable shotgun an excellent choice for high-volume waterfowling. By week's end mine will have fired hundreds of rounds without cleaning. It will still function dependably. Because it "shoots soft," I'll not be flinching or wincing. Want more power? It handles 3-inch magnums also.

We bag our next limits in different places, all marked by open water that attracts small flotillas of ducks. Away from the dikes, rice combs the surface into glistening alleys dotted here and there by white egrets and black ibis. We throttle our shooting to boost our averages and perch just a little longer on those one-legged stools to watch the living sky. The air stays comfortably warm but mosquito-free. I wear only a T-shirt and light camo raingear.

Like his guides, Javier puts in seven-day work-weeks from February through mid-August. He is not a hunter. But he talks the talk and wants to run his own lodge someday. "Hunting is profitable" he smiles. "We have fine hunting; however, the best leases are costly. You need capital to start."

One morning, we meet a local hunter and his son. Ariel gives them our birds too. "It makes no sense to tell them the fields are leased. They wouldn't understand." Few locals can afford to hunt birds, or shoot enough to dent the flocks.

Flocks are what Stateside hunters think of when Argentina comes to mind. So-called high-volume or hot-barrel shoots target not only waterfowl but doves. Javier tells me that one 15-year-old shotgunner killed 5,107 doves in a day, burning 8,000 shells. I've no desire to inflict that much pain upon myself, but the presence of many thousands is thrilling, whether you're in calf-deep water waiting for ducks to pitch into the rice or hidden in a whorl of weeds watching doves strafe sorghum. To get a taste of field shooting, Lamar and I committed an afternoon to pass-shooting over grain fields that mirrored Kansas cropland.

Instead of starlings, though, we found parrots. The brilliant iridescent green birds swarmed, outnumbering both doves and wild pigeons.

Left: Good footing and flat ground between dikes make travel easy; so too the Mossberg's light weight.

"A real nuisance to farmers," says Javier. Still, I let more than a few parakeets pass before firing at them. The last hours of daylight brought mixed squadrons of birds almost non-stop. I fired nearly 100 rounds. Enough.

Still, we never tire of sloshing through the water-prairies of rice. Our last drive down the dikes and away from the teeming skies comes too soon.

We leave as we've come, through Cordoba to Buenos Aires, a city of 15 million residents. Aerolinas Argentinas takes us up into the skies toward Miami, over the de la Plata River. We can see both shores of this broad artery from the air. We cannot see the anglers dunking lures, bicyclists whizzing by the sausage stands or the notoriously beautiful Argentinian women jogging through Buenos Aires parks. But, we can still remember the clouds of whistling ducks sifting, by the thousands, like wind-borne leaves, into flooded rice. ■

An Argentinian guide and New York editor Lamar Underwood take on the doves in sorghum.

Need More Firepower?

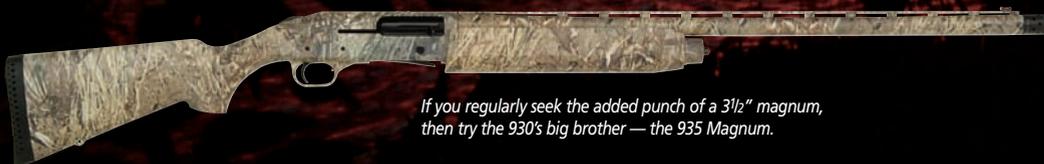

Seldom are hunting guns called upon to show their endurance like we encountered in Argentina. Big game rifles typically loaf through seasons marked by miles of hiking or hours on stand. Some take years to cycle a box of ammunition. Bird hunters get more shooting, but to warm those scatterguns they must find a clay target range. Unless they travel south of the border.

Some of the Mossberg guns we used in Argentina had already endured a marathon pounding in the dove fields. "The equivalent of 50 years of upland gunning in the Northeast — all in five days," observed Lamar.

The 930 Autoloader I used cycled 2³/₄" loads smoothly and without any malfunctions whatsoever. Designed to handle 3" loads as well, it features a self-compensating gas system that reduces recoil. Muzzle porting also makes the 930 easy to shoot, and on a trip like this where second-shot recovery is important, porting becomes even more of a bonus. Three Accu-Choke screw-in tubes add versatility. The gun is nicely proportioned and fit me well, coming up to my shoulder/eye as if it were custom fitted. Its fiber optic bead drew my eye down the rib, and the easy to see top-of-the-receiver safety is signature Mossberg, quick to use for right- and left-handers. A quick-empty magazine button clears this shotgun in a snap. Duck hunters and turkey hunters can pick from four popular camo finishes, with barrel lengths designed to maximize pattern performance and shooter preference based on intended use.

Looking for something with more punch for back home? The 930's big brother is the 935, developed to shoot 3" and 3¹/₂" magnum shotshells. It is very much the same gun, but with overbored barrels. Like the 930, several versions are listed, scaling 7¹/₂ to 7³/₄ pounds, with stock spacers that allow you to adjust pitch and length to suit. The 935 includes an Accu-Mag choke set with IC, M and F tubes, with suggested retail pricing starting from just over \$500 — quite a value, especially compared to anything else out there.

On a trip like this, where monster geese and long-range shooting is not the norm, I preferred the more nimble 930. It's hard to imagine a need for the 3¹/₂" shell in such a close-in, target-rich environment. Indeed, magnum loads in the 2³/₄" variety knock the stuffing out of geese and turkeys at normal hunting ranges. An autoloader that handles 3" haymakers and modest 2³/₄" loads gives me all the shotgun I need! It's a bargain for shooters who prize endurance in remote places where the targets never end! ■

If you regularly seek the added punch of a 3¹/₂" magnum, then try the 930's big brother — the 935 Magnum.

Delicious Snow Goose Recipes... No Really!

Contributed by Rob Olson — President, Delta Waterfowl

Hunters live by an unwritten code that dictates they must eat what they harvest, but even the most ethical of hunters often find themselves making an exception for the lowly snow goose.

As table fare, a snow goose gets less respect than Rodney Dangerfield. Some waterfowlers call them “sky carp”, but others say that’s an insult to carp. Outdoor writers have described them as “an over-cooked catcher’s mitt” and “an old pair of waders,” and on and on. Whatever you call them, most hunters agree that just the idea of eating a snow goose is hard to swallow.

“Not true,” says Delta Waterfowl President Rob Olson, who in Delta magazine revealed four snow goose recipes he swears will have even the most finicky eaters lined up for seconds.

Olson says the inspiration to write the article came from a phone conversation with a hunting companion. “I described how we were going to cook snow goose four different ways on an upcoming hunt,” he recalls. “He said, ‘I didn’t know there was one good way to cook a snow goose!’

“Like most snow goose haters, he’d never eaten one done right. We fixed my favorite recipes, and everyone agreed it was the best snow goose — in fact, the best waterfowl — they’d ever eaten.”

Olson made his point again during a recent Delta Waterfowl staff meeting at historic Kirchoffer Lodge in Manitoba’s Delta Marsh, preparing several of his favorite snow goose recipes, including his signature dish, “tastes-like-ribs barbeque goose legs”. “There were no leftovers,” he proudly pointed out.

If Olson is emphatic about the importance of hunters eating what they harvest, it’s with good reason. “In our efforts to defend hunting, Delta has begun polling non-hunters about how they perceive us,” he wrote. “Non-hunters are the vast voting majority, so their opinion will decide the fate of hunting.

“Survey after survey says that most citizens will only support us if we’re eating what we shoot. That’s why we feature the Camp Chef column in every magazine — we want to share great waterfowl recipes with our members.”

There’s never been a better time to put a few snow and blue geese — a different color phase of the same species — in the freezer. The light goose population soared from its historic average of 1.5 million birds to an estimated 5 or 6 million today. Snow geese are so abundant they threaten to destroy their fragile arctic breeding grounds by literally eating themselves out of house and home.

In an attempt to reduce the burgeoning population of light geese, a spring “conservation season” was established in 1999. That effort has been somewhat inhibited by the incredible wariness of mature birds and by the reluctance of some hunters to pursue a species they won’t eat.

One way to sidestep the moral conflict is by breasting the birds and having the meat made into spicy salami rolls, sausage or jerky by a commercial processor. While Olson endorses anything that results in hunters utilizing the meat, he says breasting snow geese wastes the legs and thighs, which he calls the most delicious parts of the bird.

Anyone who’s ever eaten Rob’s “tastes-like-ribs barbeque goose legs” would agree. “This is so easy and good, you’ve just got to try it,” Olson told readers of Delta’s Camp Chef column.

The recipe calls for boiling a large pot of water and stirring in two packages of dry onion soup mix. Add twenty goose legs/thighs, turn down the heat and simmer for 2 hours or until the meat is tender.

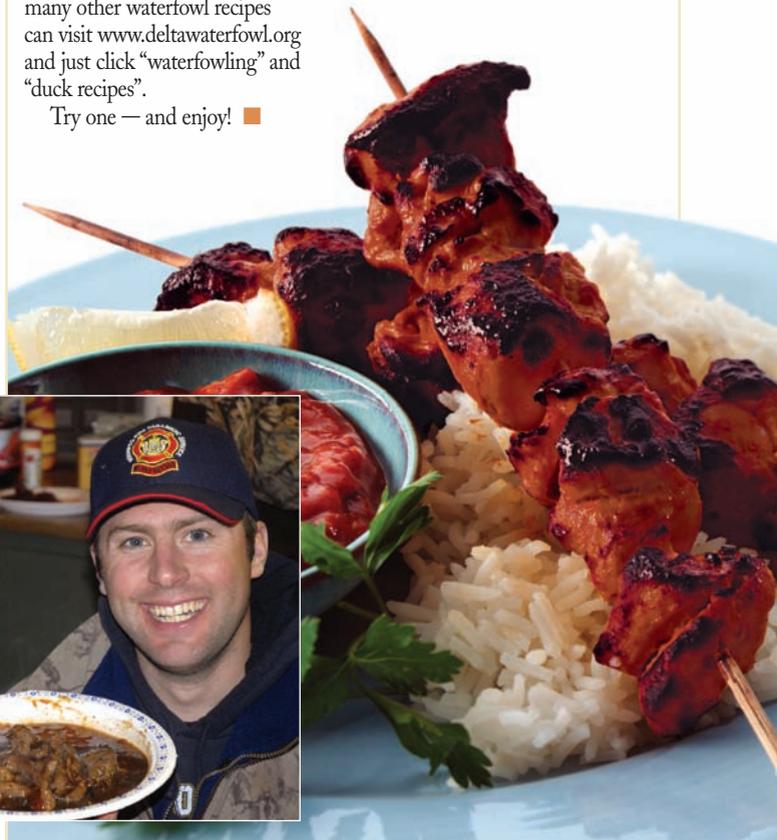

“Watch the meat closely because you don’t want it to fall off the bones,” he cautions. “Once the meat is done, simply pop the legs on the grill and slather lots of good barbeque sauce on them. I promise you cannot make enough of these,” he says.

Another quick-and-easy recipe from the Olson collection is “goose fingers”. He suggests that when hunters breast their birds, they remove the tenderloin next to the breast bone. “Simply dust these strips in seasoned flour and fry in oil or butter,” he says. “Serve them with your favorite dipping sauce — sweet chili or plum and hot mustard is a terrific combination,” he says.

Other sure-to-please recipes include goose chili, goose carpaccio and teriyaki goose kebabs. For the record, these recipes work equally well with Canada goose and duck. Hunters interested in finding these and many other waterfowl recipes can visit www.deltawaterfowl.org and just click “waterfowling” and “duck recipes”.

Try one — and enjoy! ■

Whether your favorite recipe is goose chili, kebabs or simple skewers— Rob Olson (left) of Delta Waterfowl stresses the importance of utilizing the meat of harvested birds.

HOW MOSSBERG MAKES YOU A BETTER HUNTER

I think it's safe to say that the Mossberg family has built their reputation on producing shotguns of outstanding value.

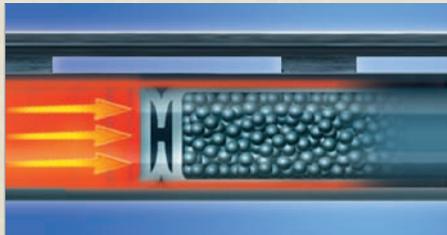

But value is a consideration you make when buying a gun; once you're in the field with it, it's the furthest thing from your mind. That's the time when the performance, durability, and the features of a gun come into play, because when it comes down to it, they have a direct bearing on your success.

And so often success in the field boils down to just a few more pellets in the pattern ...or a better-fitting stock... or better sights... or a more ergonomic safety.

I'm talking features that make the man or woman behind the gun more successful, whether they're shooting waterfowl, upland game, whitetail deer or clay targets.

Not only is there no compromising required when you opt for a Mossberg, but you'll often find features on their guns that are not offered on many competitive guns costing far more. Perhaps the best and most succinct way to describe those features and how they help bring game to bag is to look at them one by one.

Barrel Overboring—Each Mossberg 935 and 835 shotgun is overbored to 10 gauge bore dimensions. Unlike other 'backbored' brands, this unique design stretches the entire length of the shotgun barrel, providing a gas 'cushion' for the shot charge. This reduces friction and pellet deformation, resulting in exceptionally uniform, dense patterns that Mossberg overbored models are known for.

OVERBORING

A standard feature on Mossberg's 835[®] pump and 935[™] semi-auto shotguns in the Waterfowl, Turkey, and Field configurations. Overboring means that the bore, from chamber to choke, is several thousandths larger than the nominal .728" of a 12 gauge. The result is a reduction in felt recoil, but more importantly, less pellet deformation and tighter, more uniform patterns. Collectively, these 'benefits' are especially critical in the case of turkey hunting, where pattern performance is crucial to a hunter's success.

This fact has not been overlooked by the folks at Mossberg, as every dedicated turkey model is equipped with a specialized turkey tube. Ranging from the new X-Factor[™] ported tube to the venerable Ulti-Full[™] to the XX-Full variation for standard bore models, you will be hard-pressed to find a better choke system out there.

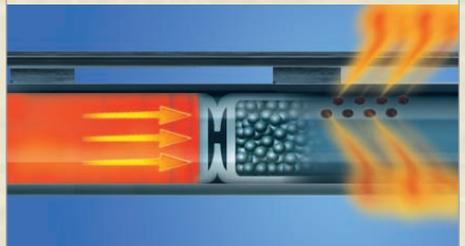

Every season it seems that I see more and more \$60 - \$70 aftermarket chokes at retail, and can't help but shake my head. After all, Mossberg turkey guns have likely been responsible for more turkey kills than any other brand out there. And let's not forget, they offer a mean waterfowl and field choke line-up as well.

A One-Two Punch—When paired together, Mossberg overbored barrel models equipped with X-Factor ported choke tubes make for an awesome one-two punch combination that puts birds in the bag.

PORTED BARRELS

By drilling multiple vent holes in the muzzle-end of the barrel just behind the choke, felt recoil is further reduced, as is the "muzzle jump" resulting from that recoil. Less muzzle jump means faster recovery of your sight picture and the time it takes to get off a second shot...or a third.

Ported barrels are offered in all iterations of the 930[™] Autoloader, and in most Turkey, Waterfowl, Slugster[®] and Field versions of the 835[®] and 500[®] models.

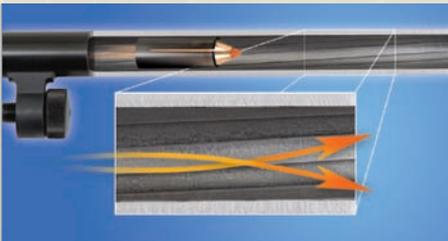

Factory Porting—Mossberg factory-ported barrels provide the distinct shooting advantages of lower felt recoil and reduced muzzle jump for a quick second shot recovery.

FULLY-RIFLED BARRELS

Mossberg pioneered the fully rifled slug barrel which debuted in the 500 pump action shotgun way back in 1988; the company has remained the leader in this field ever since. In conjunction with today's sabot slugs, hitting 2" groups at 100 yards have become somewhat commonplace, whereas with the old Foster slugs out of a smooth bore you were lucky to hit a 12" circle at 40 yards.

Not only has accuracy been improved to the point of near-perfection, so too has the effective range of the rifled bore "shotgun." Today's sabot-clad slugs shoot flat enough that a buck standing 125 yards away is about to become dinner's main course. Slugster rifled barrels are available on all models of Mossberg pump and semi-auto shotguns.

BY L.P. BREZNY

Fully-Rifled Bore—With the potent combination of a fully rifled bore and today's high-tech sabot slug ammunition, the Mossberg Slugster barrels offer slug-shooting accuracy and down-range performance beyond belief. At the heart of every Slugster barrel is a button-rifled bore and deep lands and grooves running the entire length of the barrel; each contributing to downright rifle-like accuracy at 100 yards.

CANTILEVER & RECEIVER-MOUNTED SCOPE SYSTEMS

All Mossberg 12 and 20 gauge shotguns feature drilled and tapped receivers, providing the option of adding conventional receiver-based mounts for scope installation. Within the slug barrel category, you have the option of standard adjustable rifle sights, or Mossberg's integral, barrel-mounted cantilever scope mount. With the cantilever system the barrel and scope are one integral unit, so when it's removed and replaced with a smoothbore for whatever upland, turkey, or waterfowl hunting you've got on your agenda, you can switch back to a pre-zeroed deer gun in a matter of seconds...or vice-versa. Talk about versatility!

And now you can buy accessory rifled slug barrels for the 500®, 535™ and 835® models with factory-mounted, laser bore-sighted 3-9x40mm variable scopes, taking the guesswork out of setting up a scoped shotgun.

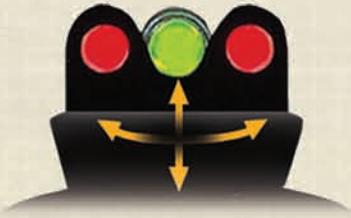

Integral Scope Base Configurations—A true time and ammo saver that provides the ability to switch barrels without having to go through the entire re-sighting process each and every time.

FIBER OPTIC SIGHTS

Fiber optic sighting systems have become all the rage over the last five years or so. Fiber optics gather and magnify ambient light to illuminate the sights for precise aiming even in the poor light of dawn and dusk, when the majority of big game, waterfowl and turkeys are most active. With the short to moderate ranges involved in gobbler and whitetail slug hunting, Mossberg's Turkey and Slug guns can be had with front and rear barrel-mounted fiber optic sights, fully adjustable for windage and elevation. On the Waterfowl end of the lineup, just about every model is offered with a special oversized fiber optic front bead.

Adjustable Fiber Optic Sights—Fully adjustable for windage and elevation, providing instant target acquisition in low-light conditions.

COMBO GUNS

Every shotgun model, from the epochal 500 pump-action, through the 535, 835, 930, 935, and now the Mossberg International™ Silver Reserve™ over-and-under line is available in special Combo configurations that include a second barrel.

You can choose among virtually any combination, from short, smoothbore barrels with interchangeable choke tube systems, mated with an accessory barrel specifically

Multi-Season Flexibility—Not every gun gets put away when one hunting season ends. These value-added two-barrel combo sets are available for all pump-action and autoloader lines, in a variety of configurations. Look for models displayed using the innovative Combo-Clamp™ fixture at local retailers.

designed for turkey hunting, or a fully rifled barrel for deer hunting with sabot slugs.

Each and every Combo Set can save you money at the cash register, as the cost of the Combo gun is definitely less than if you were to purchase the gun and barrel separately.

If you've got multiple species on your hunting menu this year, the Combo angle just makes sense.

FULLY CAMOUFLAGED GUNS

Often the difference between success and failure can be a mere glint reflected off one's gun. Whether your quarry is waterfowl, deer or turkeys, a gun that won't give you away can't help but put another card in your hand.

Virtually every model in Mossberg's shotgun lineup can be had in various Mossy Oak, Realtree and Advantage brand camouflage patterns. And it's not just the stock that's camouflaged; the entire barreled action is also covered in this attractive and highly durable finish.

The phenomenal rise in interest in predator hunting is responsible for dozens of new rifle and cartridge introductions.

We've seen the re-emergence of the .17, .20 and .22 bores in a host of rifles, and predator specific ammo to match is now widely available. Deep cover hunters who call critters in close are also benefiting as new shotguns — and far-reaching tungsten based loads — are being introduced at an unprecedented rate.

It's a great sport, and with few exceptions, one that has no seasons or geographical boundaries. Predator hunters are finally realizing that getting back into that prime deer area and thinning out the fast-rising coyote populations has a direct and immediate effect on the quality and survival of their deer herds, and, calling predators with the new electronic calls is simple, fun, and extremely effective.

Most novices start with any firearm in their battery. Just about any rifle or shotgun will take out a 30-pound coyote under the right conditions, but with bobcat hides bringing over \$800 and prime coyotes fetching a hundred dollar bill, dedicated rifles and shotguns set up specifically for harvesting thin-skinned, high-dollar hides quickly become serious considerations.

Now, thanks to Mossberg, anyone can set up a near perfect predator battery without breaking the bank.

PREDATOR PERFECT

By Ralph Lermayer

The 100 ATR

You simply don't know! Will Mr. Wyle E. Coyote appear at 120 yards and hang up, or be in your face 20 yards away before you know it's there? I call this predicament a 'certain uncertainty', and to deal with it, the ideal tool is a short, fast handling rifle that can shift from port to starboard in a flash, chambered in a round that will deliver accuracy and knockdown power no matter what the situation. The short-action, composite or wood stocked 100 ATR chambered in .243 covers all the bases, and then some.

Until recently, the .243 has always been considered an "almost there" choice. Its heaviest loadings (95, 100 and 105-grains) were always on the light side for deer, but acceptable, and its lighter bullets (65 and 70-grains) a bit much on hides. Not so today. Now, factory ammo is available in weights as low as 55-grains and most suppliers of handloading bullets offer a .243 in 55 and 58-grains.

These bullets in the .243 case turn this formerly ho-hum case into a formidable, ultra-fast and deadly-efficient coyote killing option. Factory loads with muzzle velocities approaching 4,000 fps for the .243, now challenge the likes of the revered .22-250 and .220 Swift in the speed arena, and with the higher sectional density of the 6mm (.243) options, knockdown power is devastating.

Chambering that potential into Mossberg's ultra-reliable, accurate and affordable 100 ATR, then packaging it in the nearly indestructible composite stock, and retailing it for under \$300 means the near perfect varmint round is in every hunter's reach. This is a no-nonsense rifle with all of the basics well thought out.

The heart of the rifle is the solid steel receiver, which is matched to a fully free-floating, button rifled, 22-inch barrel. It has a very quiet two-position side safety that is easily accessed and a simple to use top loading magazine. The big trigger guard won't slow down a gloved hand, and it's factory delivered with scope bases installed – a nice touch, indeed. The specifications of the 100 ATR are covered in depth within the Buyer's Guide at the back-end of this magazine, so there's no need to re-state them here. I will, however, say that reliability, accuracy and fast handling are a must for the serious predator hunter, and in that arena, the Mossberg 100 ATR really is second to none.

When my walnut stocked test rifle arrived, I first checked the bedding and found no barrel to wood contact. Then, after making sure the scope bases were snug, I mounted to my rifle a proven 3-9X40mm Sightron scope – a relatively new model that has been delivering impressive results.

My prime concern was how this rifle, with its traditional 1:10 twist would handle the lighter 55 and 60-grain loads. It didn't disappoint – lobbing the 55-grain Winchesters into a neat 3/4 inch group at 100 yards. The chrono showed they were cranking at 3,650 from this short barrel. Fast, accurate, and just a mere kiss on the shoulder – what more can a varmint hunter ask for? Heavier loads hovered at about 1 to 1-1/4 inches with the 100-grain Federals punching in at a tad under an inch (.805). Wow! This is an accurate out-of-the-box rifle, to say the very least.

It Ain't Always A Rifleman's Game

Images of an unsuspecting coyote coming to the call from a country mile away, then standing politely broadside while you bust him is what most normally associate with coyote calling.

But, for the vast majority of callers, especially those in the Pacific Northwest rainforest, dense Eastern hardwoods, or Southern timber, it just ain't so! From the Washington rain country to the Louisiana bayous, it's an "in your face" shotgun game.

In this kind of cover, coyote, fox and bobcat hunters set up a remote call, by necessity, relatively close. Sound carries 360-degrees, so action can come from any direction. The hunter usually stands, fully camouflaged, back to thick cover, watching as much country as the terrain allows. This is the world of a hard-hitting shotgun and the slick Mossberg 535 ATS fit the bill to a T. In that

family, the 535 ATS Turkey model is made to order.

Much of what we know about building turkey specific shotguns falls naturally into the predator calling game. After all, it's much the same. We're hunkered in the brush or standing in dense cover, and calling ultra-cautious, keen-eyed quarry in close. It calls for the same kind of short, fast, and totally glare and glint-proof firearm, and this close cousin of the long proven Mossberg 500 and 835 pump-action models is a natural. Since it is designed to handle the whopping 3-1/2 inch loads, it is truly a 50-yard option for experienced hunters.

Designers of the 535 ATS Turkey may not have had predator hunters in mind, but they might as well have. Here is a compact shotgun that comes to the shoulder fast, is easy to pack, and points like a rifle. The fully adjustable fiber optic sights are a boon, and the drilled and tapped receiver allows for quick and easy optics installation. With regard to optics, often a small set of cat eyes peering out of the brush over 40 yards away is the only target you'll see. Red dot type optics make that a cinch, and, night hunters rely heavily on big red dots as well.

Above: The Mossberg 535 ATs Thumbhole Turkey in Mossy Oak New Break-Up
 Below: The Mossberg 535 ATs Tactical Turkey in Realtree Hardwoods HD Green.

535 ATs Thumbhole & Tactical Turkey

Like the turkey hunter, the predator hunter often finds himself hunkered in a very awkward shooting position. With your back up against a tree, the recoil from 3-1/2 inch magnum loads can be brutal, as your shoulder has nowhere to go.

The 535 Tactical set up matches a compact, 20-inch barrel with a pistol grip style stock, which happens to also be fully-adjustable for length of pull, while offering an extra five rounds at the ready via a removable side-saddle cartridge holder.

The full pistol grip configuration positions your trigger hand in a naturally comfortable position, and allows that same hand to absorb a good deal of the recoil, while at the same time keeping it off of your immobile shoulder. The system works, and tames 3-1/2 inch loads way down to more manageable levels. Trust me, once you try one you'll become an immediate believer.

To further tame recoil, every gun comes with the extended, ported X-Factor choke tube that both aids

The benefits of Mossberg's X-Factor ported tube are two-fold: the tube provides tighter patterns for long distance shots, and the ports reduce felt recoil for greater comfort and quicker recovery for subsequent shots.

in diminishing recoil and holds the pattern together well beyond the 50 yard mark. Anyway you look at it, the 535 Tactical Turkey is a near perfect setup for the predator hunter, while serving as a low cost basis for a host of shotgun options.

In testing, I wanted to see how the short barrel and extended tube would handle the tungsten-based shot offered by Remington, Winchester and Hevi Shot. These 2, 4, and 6's are marketed as high-flying waterfowl options, but have proven devastating on varmints. With that choke, patterns held tight (80-percent inside 30-inches) to well beyond 40-50 yards, and with a well placed shot, it would be nearly impossible to think that any coyote, fox, coon or bobcat within that range would walk away. With this combination, the dense cover hunter is in no way handicapped.

You're Covered

Between the 535 ATs and the 100 ATR, every serious predator hunter can now have a hard-working, reliable combination of dedicated critter thumpers that can take the hard knocks and wear this kind of hunting can dish out. And, in typical Mossberg fashion, they can be had without breaking the budget. ■

For the predator hunter who must spend long hours awkwardly positioned against a tree, the reduced felt recoil achieved through Mossberg's 535 Thumbhole grip will be greatly appreciated — especially firing magnum loads. Like the pistol grip on the 535 Tactical, the Thumbhole's stock helps disperse recoil away from the shooter's shoulder. The model tested had been equipped with Mossberg's new Picatinny Scope Base—great for quick and easy optics attachment in the field.

The Advantage of Tungsten Shot

Perhaps the greatest boon ever to the performance of shotgun loads has been the introduction and transformation of tungsten alloys into shot.

Tungsten is heavier and denser than lead, so it flies farther and holds a pattern longer than a conventional lead load. Impact performance is also substantially improved and shooters are regularly reporting total pass through on high-flying ducks and geese.

For the predator hunter, tungsten brings an even more important benefit. With it, you can drop way down in shot size and still get extended range and enhanced penetration. That means the fox, bobcat or coyote hunter who wants minimal hide damage can drop down to #6 or even smaller shot, creating very slight hide damage. Where hides are not a concern, a load of #5 or T-shot will deliver the goods out to 50 yards and beyond.

Tungsten loads are not cheap; that's because as of this writing, there's only one mine, and it's in China! With the market all to themselves, they are able to keep prices sky-high. That leaves our manufacturers with zero options when it comes to pricing, so if we want this kind of performance, it will cost. Fortunately, predator hunters don't bang

through dozens of shots a day like duck hunters do, so tungsten is a viable option for us.

Tungsten loads are offered by Remington, Winchester, Federal, and EnvironMetal. They performed brilliantly in the author's test 12-gauge, holding perfectly efficient and dense patterns to 50 yards with the extended choke. ■

Hide damage is minimized with tungsten shot — smaller shot size can be used due to enhanced penetration over extended distances.

After 40 Years MTM is still the 1st Choice for Quality Shooting Accessories

If you want a cartridge box that:

• Holds 24 rounds
• Is virtually indestructible
• Keeps cases dry and clean
• Has a built-in magazine
• And a more than 50 other features

You want the MTM CASE-GARD 50

Today, MTM offers ammo boxes in more than 60 shapes & sizes plus a huge selection of shooting accessories!

Check us out at quality gun shops world-wide or contact us for a catalog.

MTM Molded Prod. Co. - (937) 890-7461 - www.mtmcase-gard.com

TAKE 'EM HUNTING...

[you'll be glad you did.]

This is a question that will be debated for as long as humans endure. We can't all be noted historical figures, so the measurement for the common man is more subtle, but no less important. Perhaps one critical clue can be found in the legacy a person leaves with the character of his children; for there is no doubt that we as parents imprint the direction of their lives.

Shooters and hunters by definition have a deep abiding love for the outdoors and for the traditions of hunting. For us this is an important part of our lives and a reflection of who we are. The values of these pursuits, when they are done right, are admired in the greater scope of society, and if we are able to impart those values to our children so that they may endure, then it might be said that our lives have been successful.

There can be no argument that our future is in the children we are rearing today. If gun ownership and hunting is to survive then it is imperative that the next generation take up the torch and continue with what we value.

The trouble is that times, as they always do, have changed. We all recognize that kids today are subjected to pressures that couldn't have been imagined a generation back. But we tend as a society to hide behind that as we abandon and neglect our obligations to raise our children properly. The truth is that the things that are most important to their development have not changed and perhaps most fundamental is that the adults prominent in their lives will shape the future for any child. The family may have changed, but that one simple fact has not. Our children, both biological and of the heart, need our guidance now more than ever if we as a society are to survive. If there is a better way to demonstrate our values than through shooting and hunting it has escaped my notice.

I have always seen it as an obligation to introduce my kids to

How do we measure a man's life and its impact on the world?

shooting and the outdoors. For me that job is done I suppose, as one of my children has applied to graduate school and the other is in his first year of college. I have regrets like any parent, but we did share a lot of shooting and hunting time and for that I feel nothing but

gratitude. I managed to discover a few things along the journey. Please indulge me as I share some of them in the hopes that might help you introduce a kid or two to the wonders of our sports.

If you remember nothing else, remember that kids have the attention span of a gnat. If you simply take them shooting or hunting a time or two, making sure that they are cold and bored long before you take them home, they won't say yes next time you ask.

Younger kids feel more connected to the hunt if they bring a toy gun or a BB gun. It also provides a great opportunity to teach some safety lessons. The way they learn gun safety is not in a quick three-week course, but in a lifetime of gun handling, starting with toy rifles and BB guns.

The best and perhaps only acceptable approach to safety is a long term education that insures it is imprinted in their minds so deeply that safety becomes automatic and won't be forgotten during the excitement of actual hunting. Make sure they follow the safety rules right from day one and treat the toy guns just like the real ones. Sure, they will make some mistakes, everybody does, but with a cap gun it's not a problem and they learn from those mistakes. By the time they are using "real" guns, safe handling will be so ingrained into their programming that it becomes automatic.

Take kids shooting often. Learning to shoot is fundamental to hunting success and everybody learns it better when it's a lot of fun. Spend a little money and a lot of time at the range with young shooters before they become young hunters. Don't just hand them a deer rifle; instead, start with a pellet or BB gun, then a .22.

BY BRYCE TOWSLEY

The Right Equipment Counts

Whether out in the field hunting, busting clays or plinking cans — for the beginning shooter, comfort and control are everything. The Mossberg line of Bantam products are designed for smaller shooters and are scaled down to fit them better. The Mossberg 505 pump action .410 shotgun (left) is a great place to start for the youngest shooters. A short 12-inch length of pull fits smaller frames well, and .410 shotshells have minimal recoil. For the ultimate in adjustability for the growing shooter, the Mossberg's Super Bantams (below) feature a standard 12-inch length of pull and a stock spacer and extra rubber recoil pad to bring the stock to 13-inches LOP. Later, when the shooter is ready for a full-sized shotgun, just turn in the certificate that came in the box to receive 50% off the price of the full-sized stock. A firearm that a shooter can use for a lifetime! Mossberg International's newest Bantam offerings (below, bottom) the Silver Reserve Bantam and the 702 Plinkster Bantam Combo further prove Mossberg's overall commitment to younger and smaller stature shooters.

505 Youth

A "Custom Fit" for Young and Smaller-Frame Shooters

From the beginner to the seasoned shooter alike, the 500[®] Bantam,[™] the 500[®] Super Bantam[™] and 505 Youth[™] Series pump-actions are the preferred choice of youngsters and smaller stature adults. Key safety features include an easy-to-see and operate ambidextrous top mounted safety, a special magazine tube limiting plug in .410 and 20 gauge models that renders the shotgun a "single shot" until the coach or guardian approves its removal, and a free cablelock to assist with safe storage.

As part of Mossberg's continued commitment to value and versatility, 12 and 20 gauge Bantam[™] and Super Bantam[™] models are fully interchangeable with standard size 12 and 20 gauge 500[®] model accessories, and come with a half-price certificate for a standard-size buttstock for young shooters who outgrow their Bantam dimensions.

Bantam Series models are available in 12 and 20 gauge and .410 bore

Safety is easy to see and operate.

20", 22" and 24" barrel length options for improved balance and ease of swing

Forearm Fully Rearward Forearm Fully Frontward

Reduced distance between trigger and pistol grip portion of stock for smaller hands

Reduced length of pull allows for enhanced comfort and control for smaller framed shooters.

- Each 12 and 20 gauge Bantam and Super Bantam model includes a factory discount coupon for standard-sized stock
- Every Mossberg firearm includes a free gun lock

"Train up a child in the way he should go; and when he is old, he will not depart from it."

—Old Testament, Proverbs, XXII, 6

500[®] Bantam™
Field-Deer Combo

(continued from page 32) Finally, when they are ready, move up to a deer gun of suitable caliber or gauge. The same with shotguns. Spend some time with light loads, small gauge guns and clay birds. Make them love shooting and they will shoot well. Video games will seem artificial to a kid who has spent the afternoon blasting clay targets out of the air with a youth model shotgun.

The Mossberg 505 pump action .410 shotgun is a great place to start for the youngest shooters. With a 12-inch length of pull it fits smaller frames well. The little .410 2-3/4 inch shotshell has minimal recoil. Another great feature of this shotgun is that it provides a great value for a relatively small check. It's easy to be tempted to "go cheap" when buying a gun that you know the kids will outgrow in a few years. With Mossberg's long-standing commitment to both youth shooters and to quality, however, you will never be compromising.

Have a place for the equipment and rules for its care. Part of any shooting session here at Camp Towsley includes gun cleaning and putting the equipment back where it belongs. This teaches responsibility and safety.

Let them have a little fun and be "kids." If things are slow on a hunting trip, let them do a little recreational shooting. If they want to climb a tree or a big rock, let them. The idea is to enjoy hunting in all its aspects.

Don't make hunting "goal" oriented. Killing game should be a low priority and for God's sake don't turn your kids into "trophy" hunters. Let them just be hunters for a few years. A spike buck or a doe has as much value as any other deer. Let them shoot a few deer and hunt a few years before you let them get competitive.

Few things upset me more than to watch some "adult" wipe the smile off a kid's face by making a remark about his "little buck." Maybe you wouldn't shoot that deer today, but would you when you were his or her age?

Author Bryce Towsley (second from left) flanked by his children Erin and Nathan, and (right) family friends Jimmy Little and his daughter Shae — relax after a successful hunt. The kids came up big this day— showing off (left to right) their 8-, 14- and 10-point bucks!

It's frustrating enough being a kid these days without compounding the problem by trying to learn to shoot and hunt with "adult" size equipment. Your little hunting buddy will appreciate a gun that fits. Make sure the length of pull is correct for them to reach the trigger and safety easily. The grip should be scaled down so that smaller hands fit it well and are properly positioned to pull the trigger. Little hands do not have the strength that an adult hand has and to shoot well they need good triggers.

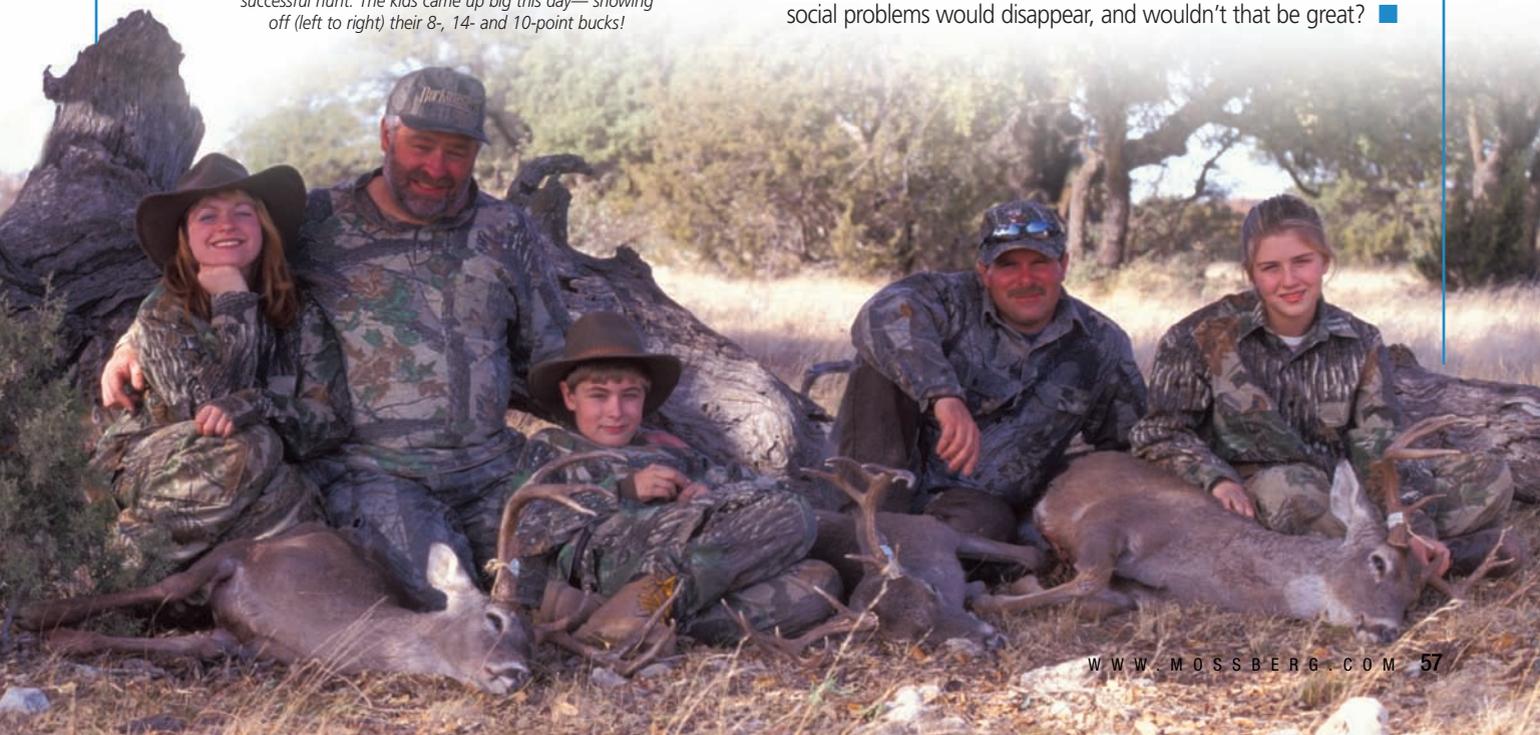

Check out the Mossberg Bantam line of shotguns. They are designed for smaller shooters and are scaled down to fit them better. The Super Bantam features a standard 12-inch length of pull, one full inch shorter than the standard Bantam. But, it comes with a stock spacer and extra rubber recoil pad to bring the stock to 13-inches overall, so the gun can grow with the kid. When the shooter is ready for a full-sized shotgun, just turn in the certificate that came in the box and receive 50% off the price of the full-sized stock. This is not just a "youth" shotgun, but is a firearm that your kid can use for a lifetime.

Think about gun weight. An eight-pound rifle may be acceptable for hunting from a stand, but is heavy for a hunt that involves any walking. An 80-pound kid is lugging ten percent of his body weight. It's equivalent to me using a 22 pound rifle, and there's no way I'd do that!

Any firearm is going to have a certain level of recoil. There are several ways to reduce its effects, including barrel porting and recoil pads, but nothing eliminates recoil completely.

The rifled slug barrels on the Mossberg Bantam and Super Bantam are ported to help reduce felt recoil. When combined with effective recoil pads and well-designed stocks, these features contribute to minimize the effects of recoil, which is the biggest fear for most younger shooters old enough to be deer hunting.

These little guys and gals are the future of our sport. Teach them responsibility and safety, but most importantly teach your kids that you care enough to spend time with them while doing what is important to you. If everybody did these things many of this country's social problems would disappear, and wouldn't that be great? ■

SAFETY IN THE FIELD

Hunting and shooting is among the safest of all sports. A recent National Safety Council report showed that firearms-related accidents are at all-time lows. While these are encouraging trends, each of us who hunts or participates in any of the shooting sports must be constantly aware of the safety and safe handling responsibilities that we share.

Being on a hunting trip is a great way to get experience nature — to immerse ourselves in the natural world, if you will. Our senses come alive with the sights, sounds and smells of the “great outdoors.”

Though this experience can be overwhelmingly beautiful, we must all be mindful of the safety aspects related to hunting and shooting. For decades Mossberg has been a leader in promoting firearms safety. Our manuals, catalogs, advertisements, and our support of organizations like the National Shooting Sports Foundation, the National Rifle Association, and the International Hunter Education Association to name a few, help spread the message of firearm safety afield and in the home.

The following are a few tips that all hunters, young and old, should keep in mind when handling firearms...

Keep the muzzle of your firearm pointed in a safe direction.

A “safe direction” is any direction where personal injury or property damage will not occur in the event the firearm is discharged. Never let your muzzle sweep or cross any part of your own or another hunter’s body (this also includes your canine hunting companion!). This is particularly important when hunters have gathered before or after a hunt, or are working a field together. Be mindful of where every hunter in your party is located and keep in constant communication with them.

Be sure your barrel is free from obstructions before shooting.

Whether hunting in muddy fields or in snowy conditions, always be mindful of the possibility of dirt or debris becoming lodged in the muzzle of your barrel. Obstructions of any kind — even snow or ice — have the potential to damage your barrel and cause personal injury. Additionally, listen to the sound of your ammunition. If any round is noticeably louder or softer than it should be, take the time to check for a possible stuck wad or

bullet from a dud lodged in the barrel.

Always ensure that the ammunition within your hunting coat or vest pockets represents ONLY the gauge you intend to shoot that day.

Why? A 20 gauge shell can lodge itself into the bore of a 12 gauge barrel, allowing a 12 gauge shell to be chambered behind it. A recipe for catastrophe, to say the least.

Bringing a small cleaning kit with a flexible wire bore cleaning tool is strongly recommended in case you need to clear your bore of an obstruction in the field.

BY JOSEPH H. BARTOZZI Senior Vice President and General Counsel, O.F. Mossberg & Sons

Keep your finger off the trigger until you are on target and have decided to fire.

A technique we at OFM stress is to have your trigger finger extended straight out along the side of the receiver, and away from the trigger guard bow. To get one's finger from that position to the trigger takes but a fraction of a second.

Be sure of your target and what is beyond it.

This is especially important should a game animal or bird appear between two hunters, as in the example shown below. Avoid the "tunnel-vision" of seeing only the game you are hunting, but allow your field of view to capture the entire area – including any hunters, buildings, or domestic animals that may be within range of your shot or bullet. To be a safe

hunter, you need to be disciplined enough to hold your fire if you see something you don't want to shoot.

Unload your firearm when you are no longer in a hunting or shooting area,

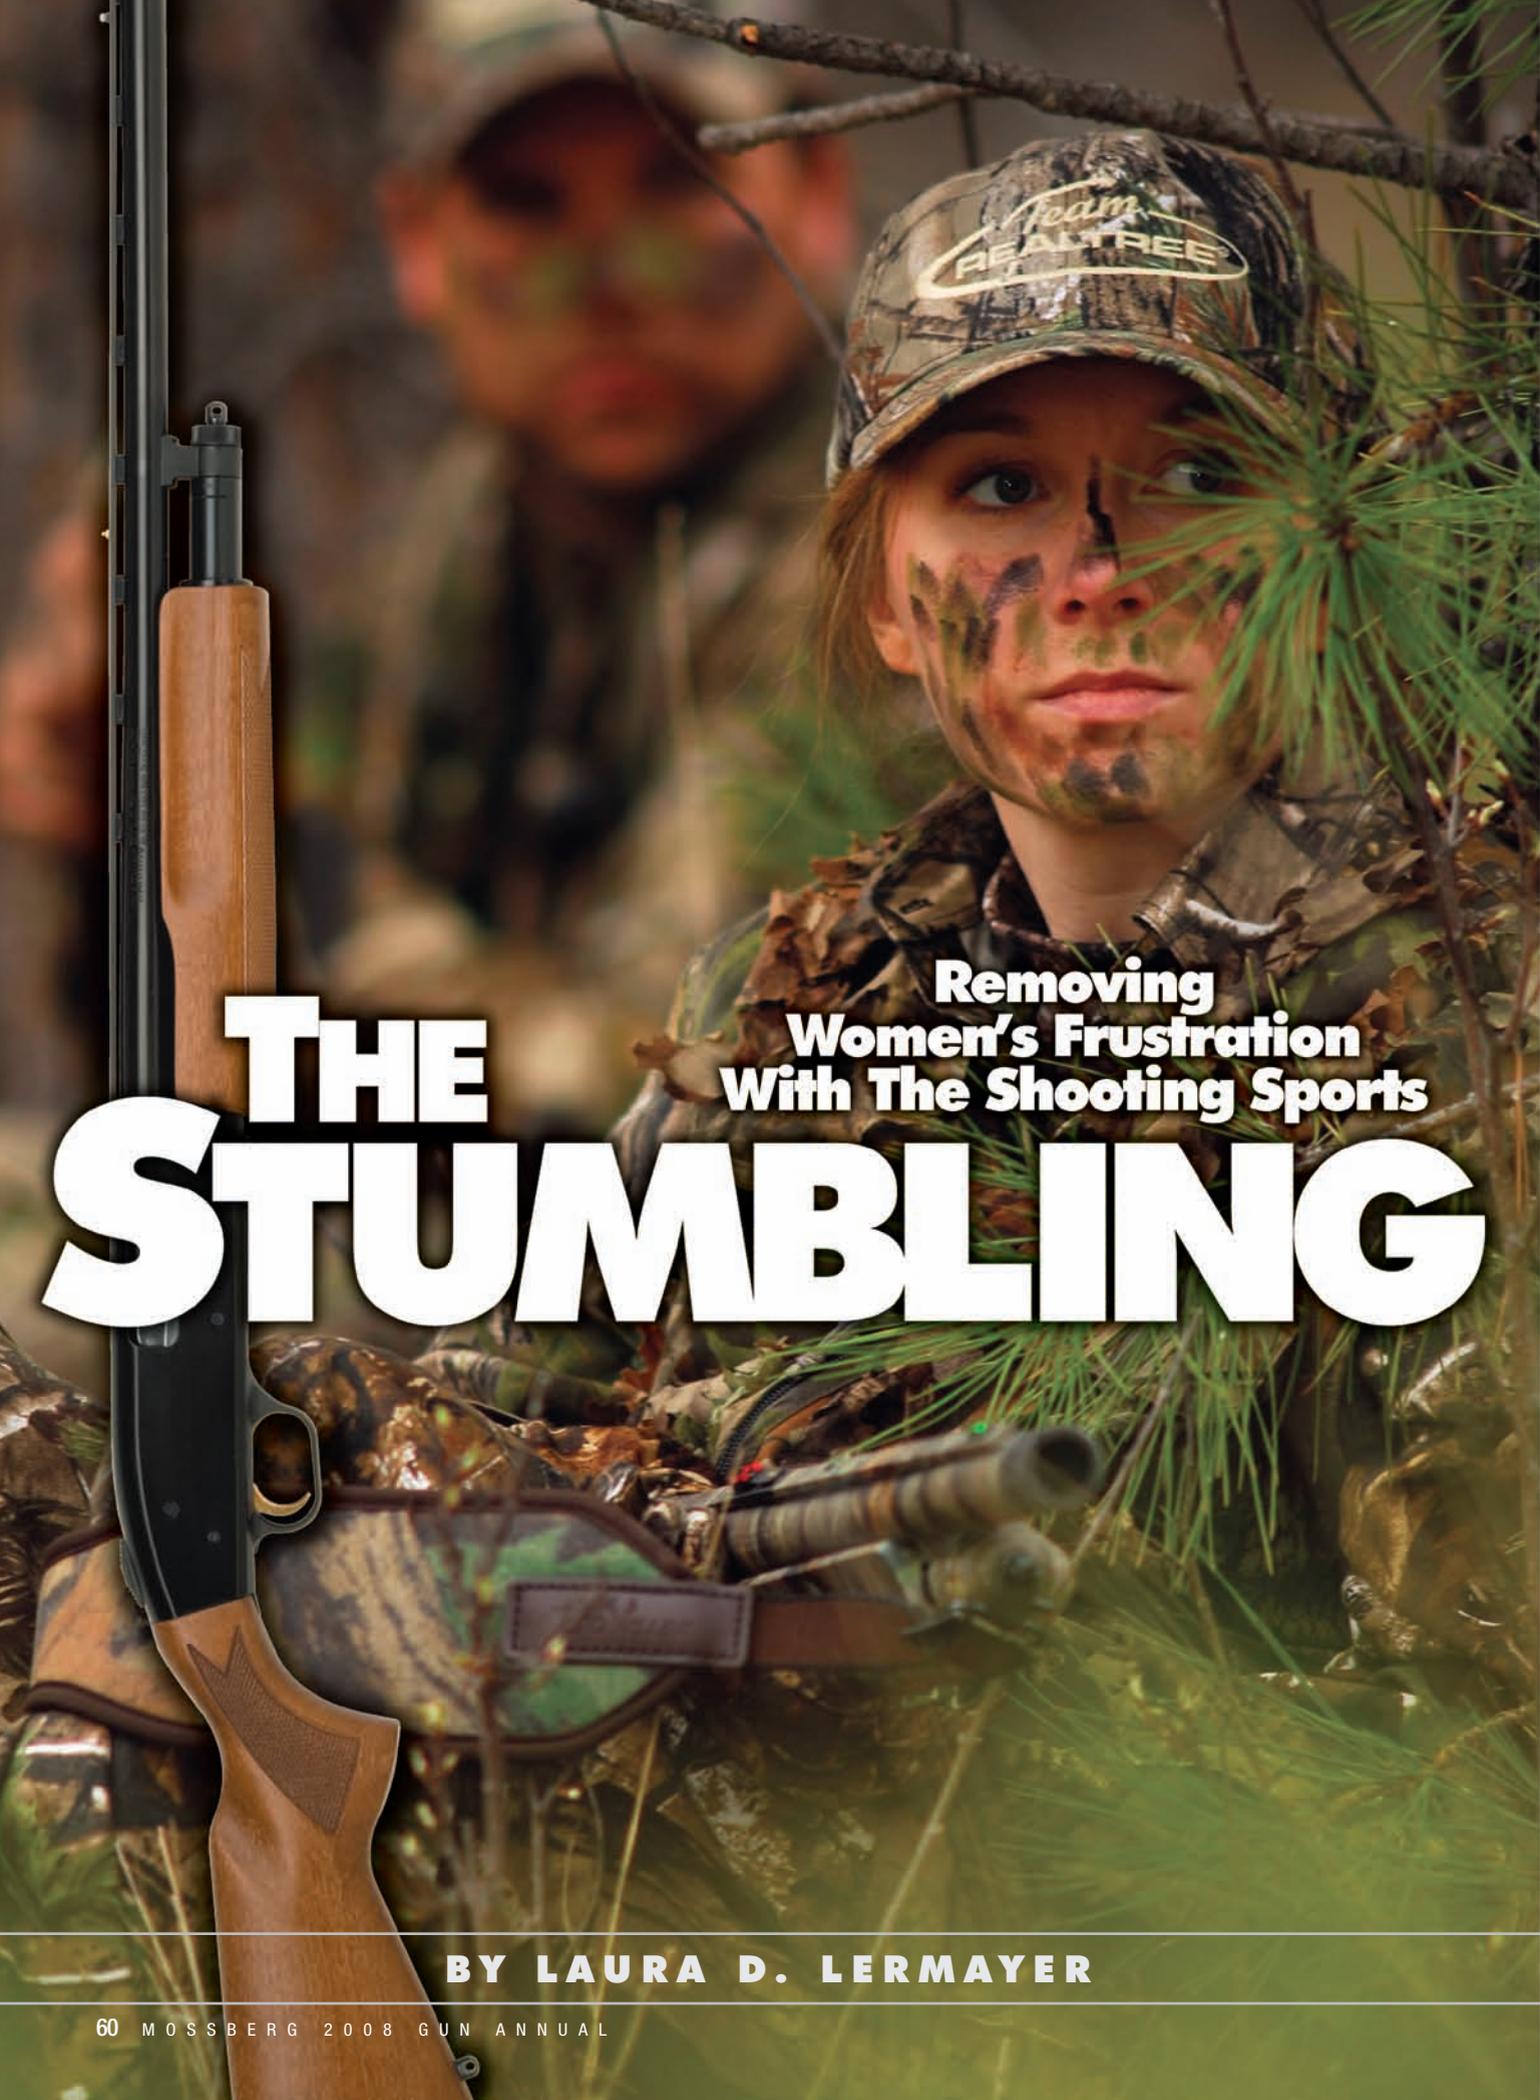

and when you have to cross a fence or negotiate rough or slippery terrain. All of us hunters have come across areas where we are approaching camps, roads, fences and terrain that is difficult to cross. The safe hunter in this situation unloads his or her firearm. Never bring loaded firearms into camp, but rather unload them a safe distance away. Likewise, when rough terrain or streams are encountered, unloading your firearm while moving through these areas will avoid an unintended discharge should you slip or fall.

These tips are not the only ones we as hunters should be focusing on, but following them will go a long way to making your hunting experience safer and more enjoyable. They should be followed at all times, and additional safety information and warnings found in your Mossberg® owner's manual and hunter safety program literature should be reviewed before you venture afield. Don't be shy when you see someone in your group being less than safe — help to educate everyone in your hunting group on the importance of firearms safety.

Be sure to understand all local laws and ordinances relating to hunting; any special requirements such as ammunition capacity; types of ammunition allowed in a particular area, and any blaze orange clothing requirements that may exist. ■

Remember, safety and safe hunting is everyone's responsibility!

**Removing
Women's Frustration
With The Shooting Sports**

THE STUMBLING

BY LAURA D. LERMAYER

My love of hunting is rooted in a greater love of the outdoors.

It is more than just the taking of game, it is time spent with family, the endless hours of scouting, and trying to predict where that big buck is going to show up next. I was fortunate to be raised in a shooting and hunting family, where us gals shot right along with the guys. I grew up hearing stories of Grandma's remarkable prowess with a shotgun, and Uncle Bud's ability to stalk and shoot bedded deer from 50 feet. Why then, did I grow up to be only an average shooter?

Shotgunning absolutely eluded me. It was supposed to be a simple matter of "instinctive" pointing and shooting, but apparently I lacked that instinct and gave it up. My rifle marksmanship was tolerable. At close range I could kill a deer or coyote, but nothing like the spectacular shooting "the guys" could pull off. I resigned myself to the reality that I would never be Annie Oakley, and wrote it off to the fact that I was the only member of my family who wore glasses.

This never diminished my love of hunting and the outdoors, however. Fortunately, 99% of the time spent hunting has nothing to do with shooting prowess. I limited myself to close range, standing still shots that matched my shooting capability, and focused instead on woodsmanship skills that would allow me to close the distance for the shots I could make with ease. Still, shooting ability is a matter of great pride in our family and I felt less than adequate.

He handed me his gun, watched me bring it to my shoulder, and said "that gun doesn't fit you." That was a baffling statement to me. After all, guns aren't like shoes, I thought, they only come in one size. Was I wrong!

BLOCK

Then, one lucky day, I met my husband to be – a certifiable, died-in-the-wool gun nut. He was delighted to find a woman who loved to hunt and shoot, and one of our very first outings (even before our first "real" date) was to hunt a bobcat that was killing a friend's ducks. He handed me his gun, watched me bring it to my shoulder, and said "that gun doesn't fit you." That was a baffling statement to me. After all, guns aren't like shoes, I thought, they only come in one size. Was I wrong!

Our next trip found me carrying a rifle he had custom fit for his teenage son. The difference was nothing short of astounding. It came to shoulder naturally, pointed where I was looking, and balanced so that I could hold it there effortlessly. That impressed me more than a dozen roses would have! Length of pull, a term I never heard before, became my shooting salvation.

*Above: Mossberg has been a leader in bringing "proper fit" firearms to the market. Among the models available for younger or smaller-framed shooters — (from top): 100 ATR Super Bantam Scoped Combo, the 100 ATR Bantam rifle, and the 500 Super Bantam Field/Deer Combo (a true multi-season performer!)
Opposite page: The 505 Youth 20 gauge's 12" LOP is just right for the beginning shooter.*

Why It Matters

To all the women reading this, you're about to become every bit as accomplished and natural a shooter as he is, and to the men reading this – pay heed. Set her up right and you'll have a shooting buddy for life!

When a rifle or shotgun is too long to mount comfortably, you wind up twisting your body, trying to conform to it. Once you manage to shoulder it, you must crane your head and neck into all sorts of awkward positions to even see the sights, much less line them up. Once you've contorted yourself to where you can get a sight picture, you're so stretched that even the mildest of recoil becomes amplified and unpleasant.

Properly fitted, a firearm should shoulder naturally, automatically align your head and eyes with the sights and balance evenly in both hands.

And, it's not just about arm length, it's also about 'reach'. The standard pistol grip on full size rifles is too long and thick. Properly fit, you should be able to comfortably wrap your hand around it, reach the trigger and still firmly grip the gun.

Well guys, women are built differently, our hands are smaller and on a standard size grip, we can't hang on. We need a smaller grip, set closer to the trigger.

When that happens, the natural design of the stock and recoil pad can do their part to minimize recoil to the point where the shooter won't even notice it. Proper fit makes the difference between shooting pleasure and misery — not to mention accuracy!

Enter The Bantams

Finally, they figured it out. Well, at least one manufacturer has. Mossberg's Bantam line of rifles and shotguns is the ideal solution for us gals as well as that up and coming youngster. I was fortunate enough to be able to get my hands on two Mossberg Bantam models; the 100 ATR Bantam bolt-action centerfire rifle and the 500 Super Bantam pump-action 20 gauge shotgun.

The 100 ATR Bantam

Things got a bit quiet around here when I informed my husband that I liked the out of the box 100 ATR Bantam in .243 as much as the

high-dollar, custom-fit rifles he had made for me – maybe even a tad better. I stand 5'4" and weigh about 130, pretty average, and this rifle is a perfect fit. Length of pull (the distance from the trigger to the end of the stock) is only 13 inches, and the pistol grip is slimmer, making it easy to wrap my hand around, and it places my trigger finger right where it needs to be. The forend is also very trim, providing a natural grip even with gloved hands. It's not heavy, is easy to pack, and in a nutshell – made to order.

The model I tested was chambered in .243 Win., an excellent caliber choice for a general all around rifle used for small game, varmints, on up to deer and antelope. It's too small for elk and the really big stuff, of course, but for what 99% of us hunt, it's the ideal caliber. Recoil is minimal, and with a properly fitted rifle with a working recoil pad like the Bantam, it's simply not an issue.

It will shoot ultra-light 55-grain bullets for what we call here at the ranch "yard work" – keeping coyotes away from the stock and thinning out the ever-expanding prairie dog colonies. Or, loaded with 95 to 100-grain bullets, it will take down deer and antelope at some pretty respectable distances.

A Bit On Scopes

Scopes are another point of contention around here. The very high magnification models can be sensitive to see through when set at high power. I like a variable of about 3-9X that isn't fussy about head position at low or high power — just like the one that came factory mounted and boresighted on my Bantam Scoped Combo model. It comes to my shoulder in a snap, without the least bit of fumbling, and still fits when I have to bring out the heavy winter parka.

And Then We Have Shotguns...

All of the proper fit requirements discussed for rifles hold true for shotguns, and then some. With a shotgun, you traditionally don't have rifle-style sights to rely on for 'aiming'. To hit instinctively by pointing alone means your gun must be a perfect extension of your head and eyes. Shotgun fit is crucial to being able to hit your intended target, and the difference in results with one that fits versus one that doesn't is nothing short of miraculous.

Mossberg's 500 Super Bantam shotgun offers the same slimmed down pistol grip area, a slimmer, easier to hang onto forend (which has

"I'm now shooting guns that fit me, and finally rivaling all of my family legends. Those little understood but essential things like length of pull, grip size, forearm position, weight, and balance made the difference."

also been positioned more rearward/closer to the shooter for ease of reach), and most importantly, an adjustable length of pull. By simply adding or removing pre-cut sections or spacers, you can set the length to perfectly match your body. Once you get it right, you'll be busting clay birds and feathered targets with the best of them.

The 500 Bantams, 500 Super Bantams, and the 505 Youth models come in a mix of .410 bore, 20, and 12 gauge configurations, but I'm convinced there is nothing you can ask a shotgun to do that can't be done with a 20. It reaches just as far and hits just as hard as the macho 12-gauge; it just sends fewer pellets downrange, meaning you have to wait a bit for closer targets.

Even among the high testosterone crowd, the 20 is considered perfect for upland game, and, I can attest to the fact that it will more than hold its own on turkey and waterfowl. You can get light loads for 'just for fun' shooting at clay birds or heavier for freezer fare. Best of all, it's easy on the shoulder. Put a 20-gauge Mossberg Bantam on your Christmas list and a whole world of previously "Guys Only" fun will be yours.

Having been happily married to my gun nut for over 20 years, I'm now shooting guns that fit me and finally rivaling all of my family legends. Those little understood but essential things like length of pull, grip size, forearm position, weight, and balance made the difference.

We recently welcomed a new daughter-in-law into the family and were delighted to discover she liked shooting and hunting. She came to the ranch for some shooting fun, and brought her own rifle. I picked it up and tried to shoulder it — no way! I looked at her and said "this rifle doesn't fit you!" Her answer — a blank look, and I knew what she was thinking, "Guns aren't like shoes, they only come in one size." Out came the Mossberg Bantam! ■

A new level of performance. Molecular.

Hoppe's Elite penetrates steel's molecular pores and removes fouling that other cleaners never touch. Nothing digs deeper, faster or cleans more thoroughly. And with continued use, it conditions your bore — cutting maintenance time by up to 80%. Plus, it's completely odorless. For true cleaning perfection, work from the inside out with Hoppe's Elite.

hoppes.com

Traditional solvents remove less than 50% of embedded carbon and have little effect on metal fouling.

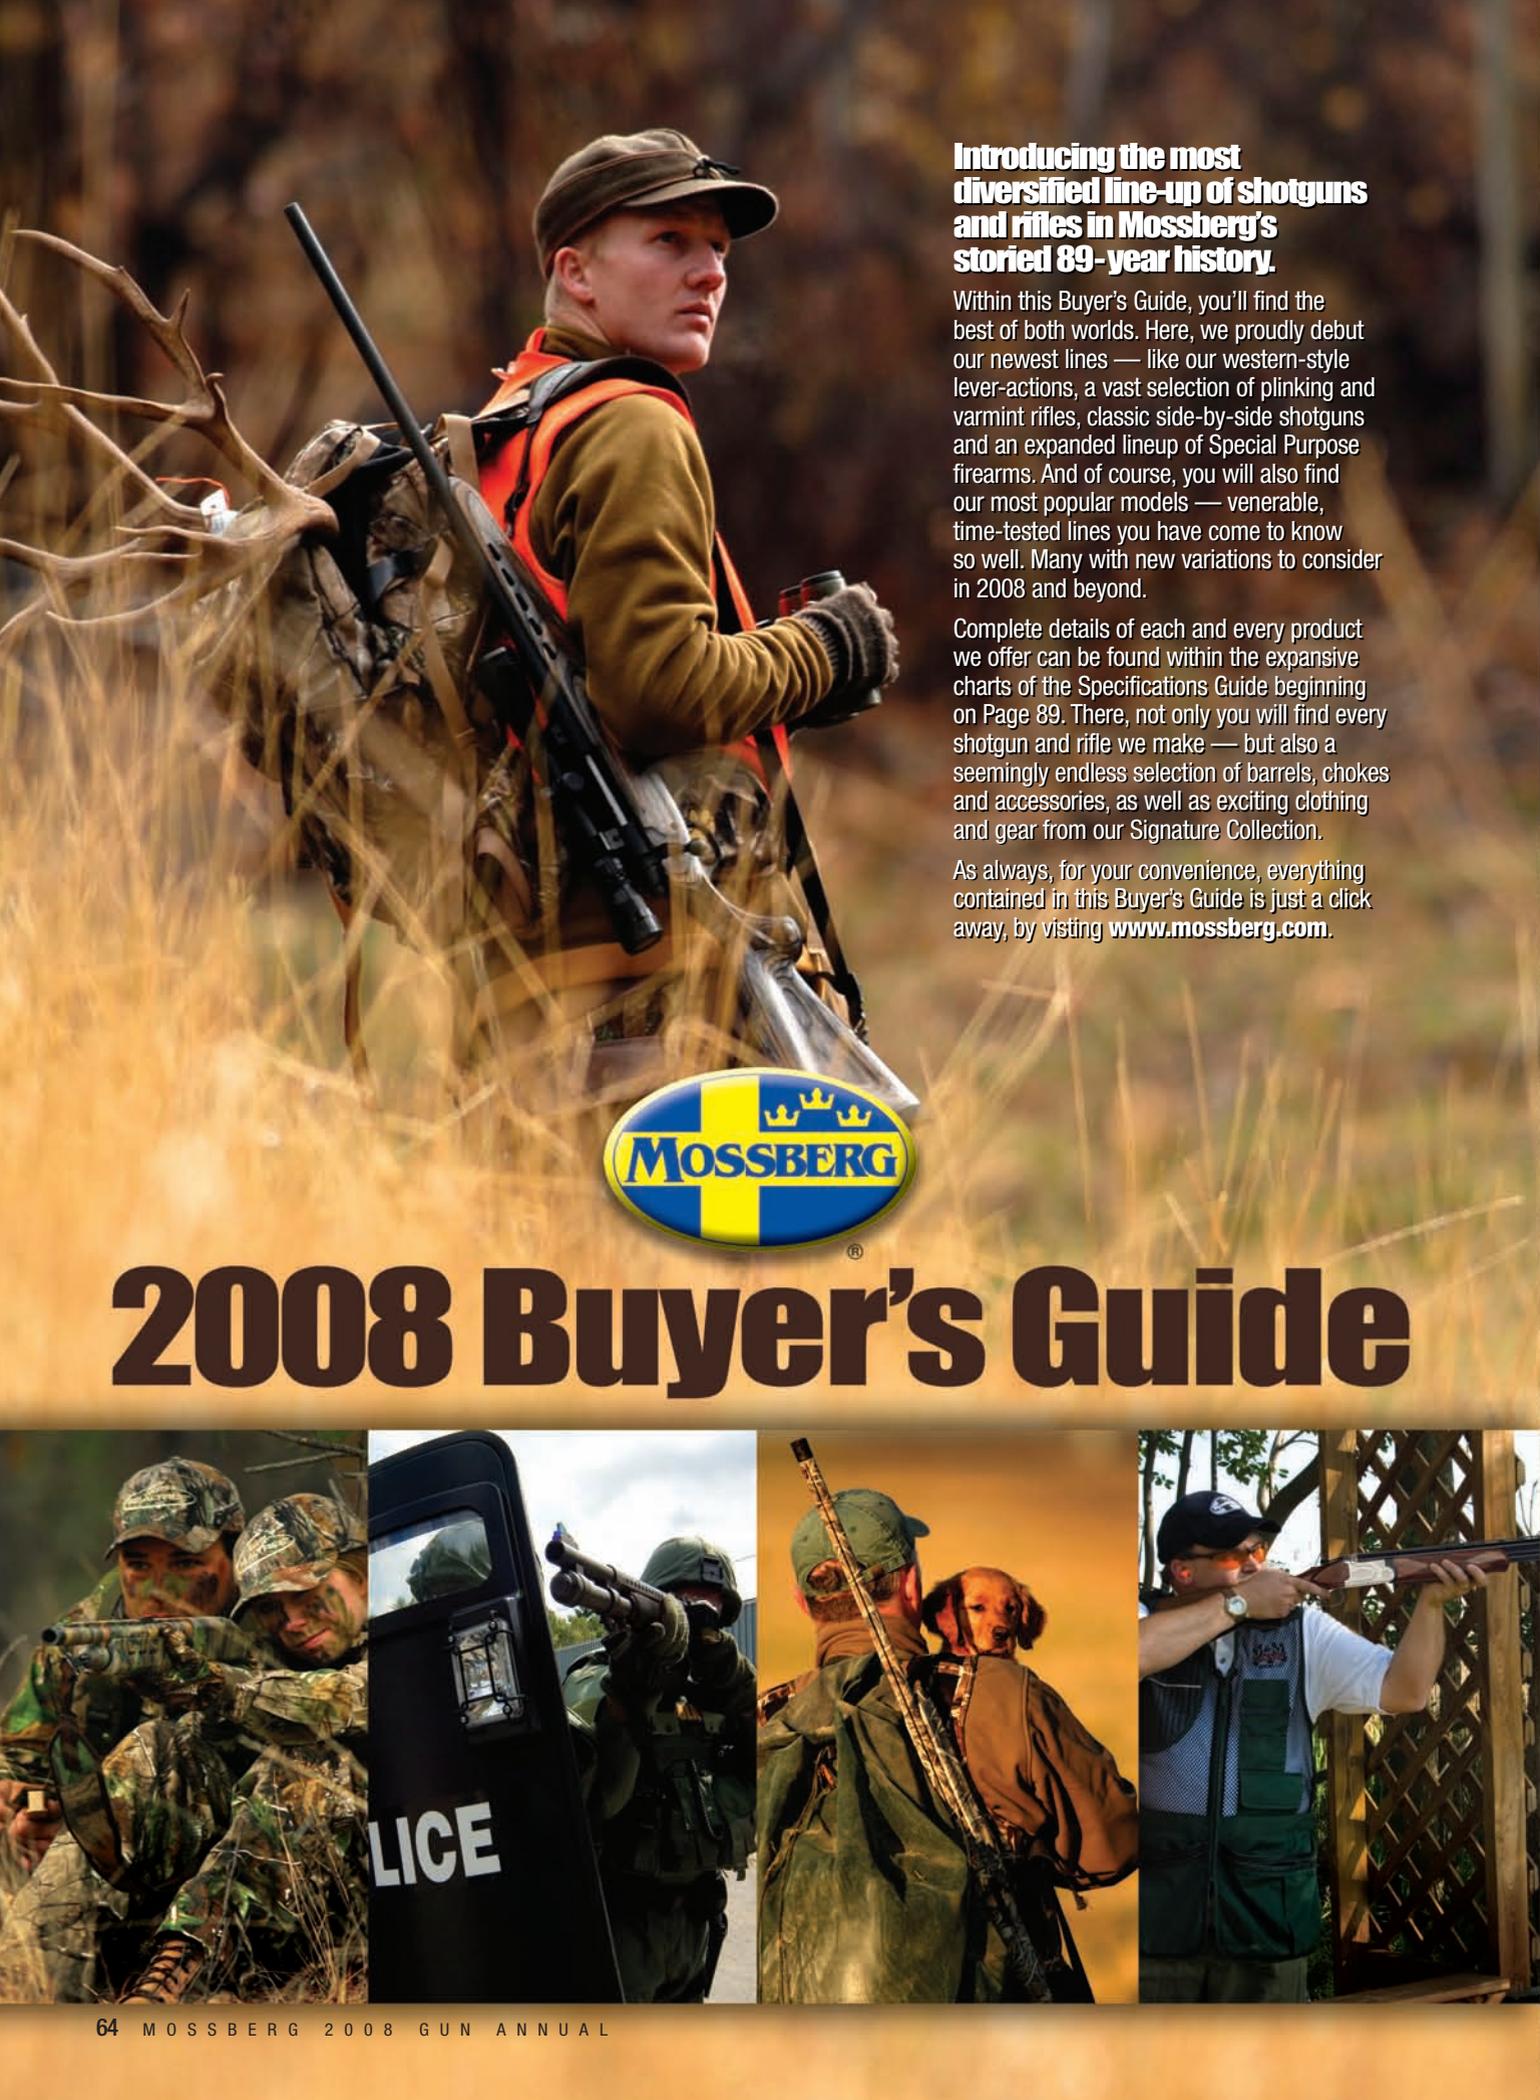

Embedded carbon acts as the bond for surface carbon and metal fouling.

Hoppe's Elite Gun Cleaner quickly removes all carbon allowing metal fouling to be easily brushed out — 98% on first pass.

Introducing the most diversified line-up of shotguns and rifles in Mossberg's storied 89-year history.

Within this Buyer's Guide, you'll find the best of both worlds. Here, we proudly debut our newest lines — like our western-style lever-actions, a vast selection of plinking and varmint rifles, classic side-by-side shotguns and an expanded lineup of Special Purpose firearms. And of course, you will also find our most popular models — venerable, time-tested lines you have come to know so well. Many with new variations to consider in 2008 and beyond.

Complete details of each and every product we offer can be found within the expansive charts of the Specifications Guide beginning on Page 89. There, not only you will find every shotgun and rifle we make — but also a seemingly endless selection of barrels, chokes and accessories, as well as exciting clothing and gear from our Signature Collection.

As always, for your convenience, everything contained in this Buyer's Guide is just a click away, by visiting www.mossberg.com.

- **Bantam and Super Bantam models**— a unique series of compact models, with special features including shortened length of pull and pistol grip, shorter barrel, a soft, supple recoil reducing butt pad, and for Super Bantam models, an innovative adjustable stock is included for the growing shooter;
- **Quality queues**— The free-floating, button-rifled barrel, recessed muzzle crown, two-piece factory installed scope bases, and a smooth, solid action all combine for a super-reliable, durable bolt-action at a tremendous price;
- **Tack driving accuracy**— the free-floating, button rifled barrel provides for exceptional "out-of-the-box" accuracy in the most extreme weather conditions;
- **Top-load magazine**— the integral top-load magazine offers 4+1 capacity while providing reliable feeding and simple loading and unloading;
- **Scope bases**— Weaver-style, two-piece scope bases are factory installed on all non-rifle sight models for quick and easy optics installation;
- **Marinecote™ models**— Mossberg's proprietary all-weather Marinecote™ finish provides the ultimate protection in extreme weather, especially near tough marine environments;
- **Wide selection**— choose from the standard Black Synthetic, unique Dura-Wood™ Walnut finish, functional Hi-Def Camo, or the traditional Walnut stock to suit your hunting style;
- **Every 100 ATR™** comes factory assembled and includes a free gun lock and 2-year limited warranty.

ALWAYS WEAR PROPER EAR AND EYE PROTECTION WHILE SHOOTING.

CHOKE TUBE WRENCH

95205 CHOKE TUBE WRENCH ALL FOR USE WITH 500, 505, 535, 835, 930, 935 MODELS

IMPORTANT NOTES **ACCU-CHOKE:** CHOKE TUBES MAY BE USED ON THE FOLLOWING INTERCHANGEABLE CHOKE MODELS: MOSSBERG, SMITH & WESSON, SAVAGE, U.S. REPEATING ARMS AND MAVERICK. **ACCU-MAG:** ACCU-MAG CHOKE TUBES ARE FOR USE WITH 935, 835 & SSI-ONE MODELS ONLY.

X-FACTOR PORTED CHOKE TUBES

Combining precision-engineered choke constrictions with two rows of specially angled ports, the X-FACTOR choke tubes (packaging at left) provide the dedicated waterfowl and turkey hunter an added edge in the field.

ACCU-CHOKE & ACCU-MAG CHOKE TUBES

For consistent pattern performance with a variety of loads, look for Accu-Choke and Accu-Mag choke tubes in a variety of gauges and constrictions.

OFFICIAL MOSSBERG LICENSED PRODUCTS

For nearly a century, the Mossberg brand has been synonymous with providing first-time and experienced shooters alike with safe and reliable firearms — at a price few others have been able to match. Now, we've expanded the Mossberg tradition of "more gun for the money" by offering the latest in high-quality, outdoor products. Under license from Mossberg, you'll find a growing number of hunting, shooting and outdoor products — scrutinized by us, endorsed with the Mossberg brand, and offered by sporting goods dealers across the country. Check them out at your local retailer or visit our website for a current list of licensed products. A few examples of what you'll find...

EYE PROTECTION

Stylish, protective safety glasses by Pyramex, for hunting and shooting applications. Available in a wide variety of styles and colors. For more information on retail locations, call **800.736.8673**

CUTLERY & FLASHLIGHTS

Based on designs by Meyerco, you'll find quality cutlery for hunting and personal use along with a selection of tactical-style flashlights. For more information on retail locations, call **214.467.8949**

OUTDOOR SEASONING

A unique selection of special spices and seasonings. Developed by Game Chef, with the outdoorsman and wild game grilling in mind. For more information on retail locations, call **361.883.0222**

PROUD SUPPORTER

RESPONSIBILITY MATTERS

Funny how the guys who show up first to help hang stands...

ARE THE ONES YOU MOST ENJOY SHARING THEM WITH.

A close group of buddies that you can count on without question is one of life's great blessings. At Mossy Oak, it's not about how many big deer or gobblers you have - it's about how many guys would show up if you needed help.
