HARD CAST & COPPER PLATED BULLETS

Our bullets are cast from a special alloy of 7% antimony and 2% tin. This alloy produces a very hard bullet (18 brinell) which allows them to be driven at higher velocities. Our plated bullets are the same hard cast bullets that are electro plated with copper to produce a totally coated bullet with no exposed lead. Several advantages are less air-borne lead particles, less bore fouling and the ability to load them to increased velocities.
