Barnes Bullets

~ 2008 ~

A respected legacy of commitment, innovation, and dedication.

“It’s been 34 years since Coni and I purchased Barnes Bullets, and we’re proud of what we’ve accomplished,” said Randy Brooks, president of Barnes Bullets. “Our first products were the pure lead core, pure copper jacketed Barnes Originals Fred Barnes first manufactured in 1932.”

Today, those bullets have been largely replaced by newer, improved versions of the revolutionary, 100-percent copper X Bullet Randy invented in 1986. Extremely popular with experienced shooters and professional hunters alike, these bullets have set new standards for accuracy and performance.

Randy Brooks, president and co-owner (with his wife Coni) of Barnes Bullets, has a long family heritage of hunting. Three generations appear in this vintage photo. At left is Randy’s maternal grandfather, Ted Graff, showing off the hide of an enormous black bear he shot on opening day of the 1948 Utah deer season. Standing at right is Randy’s uncle, Jay Graff, while Bob Brooks, Randy’s father, and LaMar Brooks, his older brother are below. The antlers of mule deer killed during the hunt are also displayed.

Randy took this trophy desert mule deer in Mexico with a .300 WSM Kimber and a 180-grain MRX.

Coni used a Kimber Montana .300 Winchester and the new 130-grain Tipped TSX to bring home this amazing Utah mule deer trophy.

Randy and Coni Brooks have actively supported the shooting sports, donating both time and finances to industry organizations. They continue to develop innovative new products to improve their customers’ hunting success.

Barnes Bullets

NEW FOR 2008

The latest product offerings for hunters who demand the best.

TIPPED TSX™

Featuring a streamlined polymer tip, the new **Tipped TSX** combines the deadly killing power of the famed Triple-Shock with improved long-range ballistics. Provides even faster expansion and “dead right there” performance. Exceptionally accurate, Barnes’ Tipped TSX creates more internal damage than any other bullet. *More details on page 6.*

MULTI-PURPOSE GREEN™ BULLETS

Developed for military and law enforcement applications, Barnes’ new **Multi-Purpose Green (MPG™)** bullets are lead-free and environmentally friendly. A highly frangible, powdered-metal copper-tin core provides explosive fragmentation.

The 55-grain 5.56mm (.224-inch) and 140-grain 7.62mm (.308-inch) MPG bullets are designed for military-style autoloaders and other fast-twist firearms. MPG bullets remain intact, eliminating jammed actions and plugged barrels. *More details on page 12.*

RELOADING MANUAL NUMBER 4

Barnes Reloading Manual Number 4 is now available. Extensive loading data covers the full range of Barnes Bullets. More than 600 pages of full-color images, customer photos and testimonials make the Reloading Manual Number 4 a must-have for any avid hunter.

According to Randy Brooks, president and bullet innovator, “This manual is for both seasoned and beginning shooters. It shows handloaders how to get optimum performance from Barnes Bullets.” *Details about Barnes’ Reloading Manual Number 4 can be found on page 14.*

FREE OFFER! “BULLET MYTHS BUSTED” DVD

Is bullet energy really the best guide to killing power? Which bullets expand faster in deer? “Bullet Myths Busted,” the second in Barnes’ “Choosing the Right Bullet” DVD series, is being offered free to Barnes’ customers and other shooters. *More details on page 14.*

Triple-Shock™ X BULLET®

The most effective and dependable
hunting bullets available.

- Faster expansion than competing lead-core bullets offer
- Exceptional accuracy
- Lead-free, 100% copper construction
- Razor-sharp cutting edges
- Out-penetrates lead-core bullets
- Won't fragment or come apart
- Better weight retention than any lead-core bullet
- Available in factory ammunition

All-copper Triple-Shock™ X Bullets® expand faster than conventional lead-core bullets, destroying vital organs and causing massive hydraulic shock. Aided by four, razor-edged cutting petals, they penetrate deeper through tissue and heavy bone.

Rapid double-diameter expansion at both high and low velocities, combined with extreme penetration make TSX™ bullets your best choice for everything from whitetail deer to the largest game. Typically retain 100 percent of their original weight.

Multiple grooves in the bullet's shank relieve pressure, allowing greater accuracy and higher safe velocities. Experienced hunters agree Barnes TSX are the deadliest, most dependable bullets available today.

Barnes' Triple-Shock X Bullet was given the NRA Golden Bullseye Award for ammunition product of the year in 2006 by Shooting Illustrated magazine.

This battle-scarred Arizona bull elk was the prize trophy of Shawn Smith after a well placed shot with her .300 WSM and a 165-grain TSX.

"TRIPLE-SHOCK" is a registered trademark of Alliant Techsystems Inc.

Triple-Shock™ X BULLET®

“Right now” expansion and deadly, deep-driving penetration.

Here’s what happens when a **Barnes Triple-Shock™ X Bullet®** passes through a block of ballistic gelatin at high velocity. The massive hydraulic shock wave continues to expand even after the bullet exits. Four razor-edged copper petals slice through vital organs, producing maximum internal damage. Pass-through penetration insures maximum loss of blood.

No hunting bullet outperforms the Barnes TSX. Featuring 100-percent copper construction, the TSX expands faster than conventional lead-core bullets while typically retaining its original weight. Defeats the toughest tissue and heaviest bone.

“Right now” expansion and deep-driving penetration make Barnes’ TSX the deadliest hunting bullet you can buy. Accuracy is unsurpassed.

Tipped TSX™ X BULLET®

New from Barnes Bullets: The Tipped TSX.

- 100% lead-free
- Grooved for lower pressures
- Rapid Expansion
- Higher ballistic coefficient
- Deadly accuracy
- 99-100% weight retention
- Available in factory ammunition

A polymer tip has been added to the newest version of Barnes' Triple-Shock X Bullet. The new **Tipped TSX** features the same all-copper body with multiple rings cut into the shank. The streamlined tip boosts BC for better long-range ballistics. Expands instantly, even on thin-skinned game.

Like the Triple-Shock, the Tipped TSX penetrates completely through tough tissue and heavy bone, while powerful hydraulic forces destroy vital organs.

Retains virtually 100 percent of its original weight. Four razor-sharp cutting petals create more internal damage than any competing bullet for cleaner, quicker kills.

The Barnes Tipped TSX - *accept no imitations.*

Customers call our pure copper Triple-Shock the perfect bullet. We improved on perfection by adding a streamlined tip.

Dave Scovill, editor of Handloader, Rifle and Successful Hunter magazine, was one of the first to try the new 130-grain .308 Tipped TSX in Africa with amazing results.

Maximum Range™ X BULLET®

The most technologically advanced hunting bullet ever created.

Barnes' Maximum Range™ X Bullet® (MRX™) features an all-copper body, along with a patented, tungsten-based Silvex® core and streamlined Delrin® tip. Combines a high ballistic coefficient and exceptional accuracy with premium long-range performance.

Provides controlled expansion at both short and long range. Typically retains 100 percent of its original weight. Delivers the deep-penetrating, bone-smashing power needed for raking shots at game. Writers have called the MRX, *"the most technologically advanced hunting bullet ever created,"* and *"the ultimate multi-tasking do-anything big game rifle bullet."*

MRX received the NRA Golden Bullseye Award for ammunition product of the year in 2007 by American Hunter magazine.

- Deadly long-range accuracy
- Rapid expansion at all ranges
- Flatter trajectory
- Greater retained energy at long range
- Exceptional penetration
- Full weight retention
- 100% Lead-free
- Won't fragment on impact or blow up on game.
- Sold in 20-bullet packs
- Available in factory ammunition

Bob Pew used a Barnes 180-grain MRX bullet to take this great red hartebeest with his .300 Winchester Magnum.

Expander MZ™

MUZZLELOADER

Devastating expansion at both high and low velocities.

- 100% copper
- Exceptional accuracy
- Full weight retention
- Razor-sharp cutting edges
- Double-diameter expansion
- Deep penetration
- Effective at high and low velocities
- Recommended for in-line rifles

The muzzleloader version of the X Bullet is 100 percent copper with a large, hollow cavity for quick, sure expansion. They produce more consistent shot-to-shot velocities and better accuracy than competing bullets allow. This results in greater shooter confidence and more one-shot kills.

Expander MZ bullets deliver deadly performance at both high and low velocities. They expand to twice their original diameter, creating six razor-sharp copper petals that slice through game. These tough, deep-driving bullets typically retain 100 percent of their original weight.

Barnes MZ Aligner Tools are recommended for faster loading and enhanced accuracy.

A separate Aligner Tool is required for each caliber and bullet nose configuration.

Expander MZ bullets are available in .45-caliber, 195-grain; .50-caliber, 250- and 300-grain; and .54-caliber, 275- and 325-grain sizes in 15- and 24-bullet packs.

A 195-grain Barnes Expander MZ was used by Mark Hanten in his .45-caliber muzzleloader to take this Iowa buck.

Spit-Fire MZ™ AND TMZ™

The deadliest muzzleloader bullets money can buy.

The Barnes **Spit-Fire MZ** and **Spit-Fire TMZ** feature the same 100-percent copper construction as the Expander MZ bullets, but with design changes that make them more effective at longer range.

A streamlined semi-spitzer ogive, boattail base and tack-driving accuracy make the Barnes **Spit-Fire™ MZ** a great choice at extended range. It delivers deadly performance at high and low velocities. Expands to double diameter, creating six razor-sharp petals for massive shock and deep penetration. Retains virtually 100 percent of original weight.

The **Spit-Fire™ TMZ** has a streamlined polymer tip for faster expansion. Higher ballistic coefficient means exceptional long-range performance. Remains intact at extreme velocities, yet expands at only 1050 fps. Redesigned sabot loads faster while retaining the tight gas seal that makes the Expander MZ, Spit-Fire MZ and Spit-Fire TMZ the most accurate muzzleloader bullets on the market.

SPIT-FIRE MZ:

- 100% copper
- Exceptional accuracy
- Full weight retention
- Deadly at long range
- Razor-sharp cutting edges
- Double-diameter expansion
- Deep penetration
- Effective at high and low velocities

Available in .50 caliber, 245- and 285-grain bullets in 15- and 24-bullet packs.

SPIT-FIRE TMZ:

- Outstanding accuracy
- New polymer tip
- Higher ballistic coefficient
- Rapid expansion
- Easier loading

Available in .50 caliber, 250- and 290-grain bullets in 15- and 24-bullet packs.

MZ Aligner Tools are individually sized to fit Barnes' .45, .50 and .54-caliber Expander MZ bullets. A separate Aligner Tool is required for each caliber and bullet nose configuration.

Barnes XPBTM PISTOL BULLETS

**Outperforms lead-core bullets
right down the line.**

- Proven X Bullet technology
- 100% copper – no toxic lead residue
- Out-penetrates jacketed lead core bullets
- Unmatched expansion
- 12 razor-sharp cutting edges
- No fragmentation – remains intact
- Available in factory ammunition

Originally designed for demanding military applications, 100 percent copper XPB Pistol Bullets are now available for hunting and sporting use, as well as law enforcement and self-defense.

HUNTING AND SPORTING APPLICATIONS

Barnes' XPB handgun bullets are 100 percent copper and totally lead-free. On impact, they expand to more than twice their original diameter, creating six razor-sharp petals for maximum shock and tissue damage.

Designed for .454 Casull, .480 Ruger, .475 Linebaugh, .460 Smith & Wesson and .500 S&W Magnum velocities, these bullets provide the controlled expansion and deep penetration required for the largest game.

XPB bullets for .357, .41, .44 magnum and .45 Colt revolvers are top choices for hunting deer and antelope. They're also effective on smaller game.

LAW ENFORCEMENT, MILITARY AND SELF-DEFENSE

XPB .380 ACP, 9mm, .38 Special, .357 Sig, .40 S&W, 10mm, .44 Special, .45 Gap and .45 ACP pistol bullets deliver double-diameter expansion. Lighter weight means less recoil and faster recovery time, while still producing the 12 to 18 inches of penetration preferred for law enforcement and military applications.

These controlled-expanding bullets track well after penetrating standard barriers. Easily penetrate windshield glass. Lead-free construction prevents contamination of indoor practice ranges and other enclosed environments.

The ideal choice for military, law enforcement and self defense applications, XPB pistol bullets outperform lead-core bullets right down the line. Exceptional expansion and penetration, 100 percent weight retention.

Varmint Grenade™

Produces instant fragmentation and dramatic one-shot kills.

Based on a design Barnes developed for military applications, the **Varmint Grenade** is a flat-base, hollow-cavity bullet with a copper-tin composite core. Surrounded by a substantial gilding-metal jacket, the highly frangible core greatly reduces the chance of ricochets. Remains intact at ultra-high velocities, yet fragments explosively on impact—with spectacular results! Virtually vaporizes ground squirrels and prairie dogs, even at extended range.

This lead-free bullet produces instant fragmentation and dramatic one-shot kills. The Varmint Grenade expends its energy early, seldom exiting bobcat- and coyote-sized predators. Valuable pelts remain virtually undamaged.

- Sniper-like accuracy
- Dependable long-range kills
- Explosive performance
- Lead free
- Remains intact at extreme velocities
- Preserves valuable pelts
- Offered in 204 caliber, 26-grain; .224 caliber, 36- and 50-grain; and .243 caliber, 62-grain.
- Available factory-loaded in .223 and .22-250 Black Hills ammunition.

BARNES®
VARMINT GRENADE

THE ULTIMATE SMALL-CALIBER WEAPON

Coni Brooks is shown field testing the new Varmint Grenade bullets on a prairie dog town.

Barnes MPG™

MULTI-PURPOSE GREEN

Combines pinpoint accuracy with explosive fragmentation.

- Developed with military technology
- Lead-free “Green” construction
- Highly frangible
- Sniper-like accuracy
- Virtually eliminates autoloader jams and plugged barrels
- Remains intact at ultra-high velocities

Available in 100-round boxes of 5.56mm and 50-round boxes of 7.62mm bullets.

For 2008, Barnes offers two all-new bullets featuring **Multi-Purpose Green (MPG™)** technology developed for military and law enforcement applications. MPG bullets feature a highly frangible, powdered-metal copper-tin core inside a guiding metal jacket. The bullets are lead-free – often a requirement in military and LE practice environments. These open-tip bullets hold together at ultra-high velocities and extreme rates of spin. They combine pinpoint accuracy with explosive fragmentation.

The 55-grain 5.56mm (.224) MPG bullet is designed for M4, HK416 and AR-15 type autoloaders and other firearms with rifling twist rates of 1:9” or faster. A 140-grain 7.62mm (.308) version is available for AR-10, SR-25, M40 (Remington 700) and M14 rifles with 1:12” or faster rifling twists. Unlike frangible bullets lacking a protective jacket, MPG bullets remain intact under the rigors of handling, feeding and firing. This eliminates the primary cause of jammed actions and plugged barrels often experienced when firing frangible ammunition in autoloading rifles.

These extremely accurate, Multi-Purpose bullets are ideal for shooting steel targets, competition, plinking, hunting and home defense.

Panther DCM Rifle from DPMS Panther Arms.

Solids™ AND Originals™

**When you only have one shot,
you can count on Barnes Bullets.**

BARNES BANDED SOLIDS

Barnes' Banded Solids stop dangerous game right now! Machined from homogenous copper/zinc alloy, these indestructible bullets track straight and won't disintegrate or deflect on heavy bone. The most dependable dangerous-game solids you can buy.

Multiple bands, or rings, cut into the bullet's shank prevent excess pressure, eliminating concerns about damaging fine double-rifle barrels. Weight-matched with Triple-Shock X Bullets of the same caliber, Banded Solids can be interchanged with expanding TSX bullets without varying point of impact.

Designed for target shooting, Banded Solid Spitzers also kill fur-bearing game cleanly with minimal damage to valuable pelts.

- Tough copper alloy
- Deep, dependable penetration
- Tracks straight
- Won't deflect on bone
- 100% weight retention
- No deformation

BARNES ORIGINALS™

Barnes Originals have enjoyed a loyal following since 1932. Featuring a thick copper jacket pressure-formed around a pure lead core, these time-tested bullets are still offered for selected cartridges like the .348 Winchester, .38-55, .375 Winchester and .45-70.

Barnes Originals expand to more than twice their original diameter. Many big game hunters continue to rely on this time-proven bullet.

- Pure copper-tubing exterior
- Pure lead core
- Controlled expansion
- Deep penetration
- Proven results

Barnes Bullets

SINCE 1932

Making the most of your hunting and shooting experience.

BARNES RELOADING MANUAL NUMBER 4

Available in 2008, Barnes' Reloading Manual Number 4 features extensive loading data for Barnes Triple-Shock® X-Bullets® (TSX™) and Maximum-Range X (MRX™) hunting bullets, and the recently introduced Varmint Grenade™. Loads are also offered for the new Barnes Banded Solids™, along with data for bigbore cartridges like the .470 and .500 Nitro, .50S Gibbs and .577 Nitro Express.

Loads are provided for Barnes' greatly expanded selection of XPB™ pistol bullets, along with recommended loads for Barnes Expander MZ™, long-range Spit-Fire MZ™ and TMZ™ muzzleloader bullets.

FREE DVD FROM BARNES

"Bullet Myths Busted," the second in the "Choosing the Right Bullet" DVD series, is being offered free from Barnes Bullets. The video tackles popular misconceptions about bullet performance and unmasks false claims. View the explosive performance of Barnes' new Varmint Grenade bullet. See which hunting bullets are deadlier than others, and why.

Shooters in the United States can obtain their own FREE copy (a \$15.99 value) of the new DVD by simply visiting www.barnesbullets.com and requesting one. Orders can also be placed by calling toll-free: 1-800-574-9200.

Those residing outside the USA will be charged a nominal US \$7.50 fee to cover shipping and handling.
