Barnes Bullets

~ 2009 ~

Growth Brings Growth for Barnes Bullets

In 1974, Randy and Coni Brooks began manufacturing bullets in the basement of their 580-square-foot home. The couple bought the bullet-making business from those who had purchased it from Fred Barnes, who founded the company in the early 1930s.

As the business grew, so did the buildings—a 1000-square-foot addition in 1976, followed by a 3,500-square-foot facility in 1983. After Randy invented the immensely popular all-copper X Bullet in 1986, business began booming. Outgrowing its 35,000 square-foot manufacturing plant erected in 1996, Barnes Bullets will

now occupy a new, state-of-the-art facility in Mona, Utah, 40 miles south of its former location.

Randy took this trophy desert mule deer in Mexico with a .300 WSM Kimber and a 180-grain MRX.

"Barnes leads the industry with innovative bullets like the all-copper Triple-Shock X Bullet, the Tipped Triple-Shock, and other muzzleloader, handgun and varmint bullet designs," said Randy Brooks, president of Barnes Bullets.

"The copper bullets we pioneered have proven so popular other manufacturers are attempting to imitate Barnes' success," he added. "Accept no imitations."

Coni used a Kimber Montana .300 Winchester and the 130-grain Tipped TSX to bring home this amazing Utah mule deer trophy.

On the cover:

Denny Austad with Utah Spider Bull

Stan Christensen with record shiras moose

Ron Spomer with monster whitetail

Lifetime hunters Randy and Coni Brooks have long supported the shooting sports. Donating both time and finances to industry organizations, they also develop innovative new products to help their customers succeed afield.

Lead-free bullets began with Barnes

Barnes Bullets

NEW FOR 2009

The latest product offerings for hunters who demand the best.

SPIT-FIRE T-EZ™

Easy-loading sabot makes fast follow-up shots possible, even in fouled or tight-fitting bores. Flat-base Spit-Fire T-EZ bullet retains the tight gas seal needed to reduce gas blow-by, ensuring exceptional accuracy. Streamlined polymer tip boosts ballistic coefficient and promotes rapid expansion. Remains intact at extreme velocities, expands at only 1050 fps. *More details on page 9.*

M/LE™ TACTICAL BULLETS

Barnes' new Military/Law Enforcement Tactical lineup includes RRLP™ (reduced ricochet, limited penetration) rifle bullets, all-copper TAC-X™ rifle bullets, and TAC-LR™ bullets for long-range shooting. TAC-XP™ pistol bullets are offered in .380 ACP through .45 ACP calibers. *See center insert for more information.*

30-grain .22 Hornet (.224") Varmint Grenade

MID-YEAR INTRODUCTION

Attention hog and bear hunters! Watch for the new **Barnes Buster™** heavy-for-caliber handgun/lever rifle bullets to be introduced in mid-2009. Provides the deep penetration needed to drop these tough animals in their tracks.

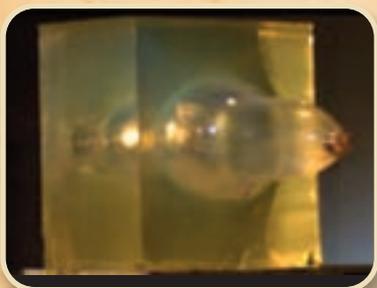

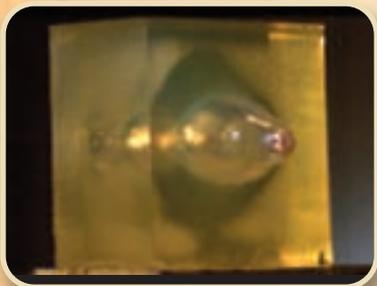

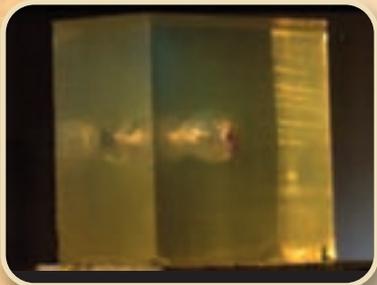

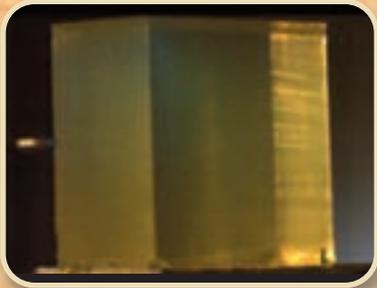

RELOADING MANUAL NUMBER 4

Contains extensive loading data and energy tables for Triple-Shock X Bullets, XPB pistol bullets, Banded Solids and other Barnes bullets. A "must" for anyone who loads and shoots Barnes Bullets. *Details about Barnes' Reloading Manual Number 4 can be found on page 14.*

Triple-Shock[®] X BULLET[®]

**Double-diameter expansion,
deep penetration.**

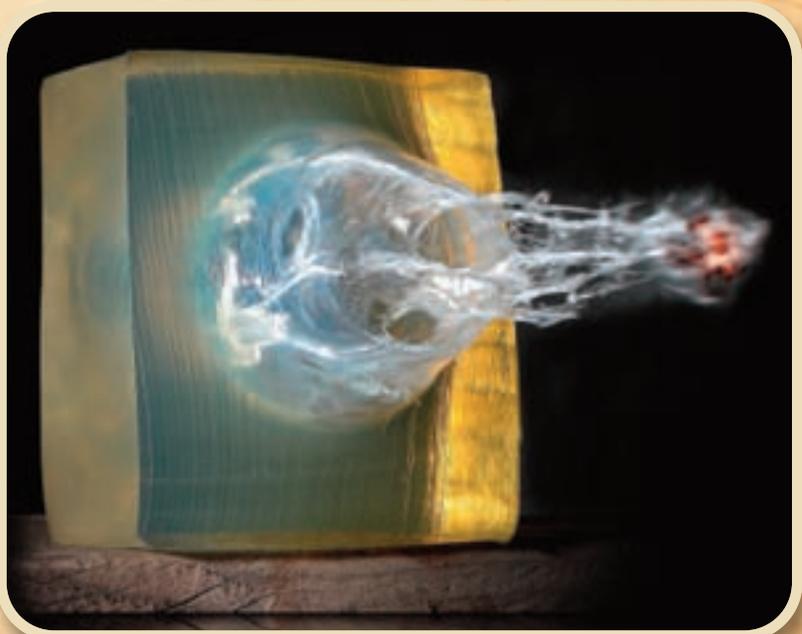

Entering ballistic gelatin at high velocity, a Barnes Triple-Shock[®] X Bullet[®] immediately expands as hydraulic pressure forces the specially engineered nose cavity open. The shock wave dynamically displaces the gelatin, simulating its affect on game. After creating extensive internal damage, the bullet exits with significant loss of blood. The expanding shock wave continues disrupting the animal's system.

All-copper construction—there's no lead core to deform or disintegrate. Typically retains 100 percent of its weight after full penetration.

In 1986, Randy Brooks began developing a 100-percent copper, lead-free bullet. The Barnes X Bullet expanded rapidly, retained virtually 100 percent of its weight, and delivered deep, dependable penetration. Introduced in 1989, the Barnes X Bullet forever changed hunting bullet design.

Today's improved versions—the Triple-Shock, Tipped Triple-Shock and MRX Bullets—offer performance competing bullets simply can't match. Recommended by many hunting guides and African PHs.

Some "Johnny-come-lately" manufacturers have attempted to copy Barnes' success. Lacking Barnes' 20-plus years of experience researching, designing and producing lead-free copper bullets, they have a lot of catching up to do. *Barnes Bullets—accept no imitations.*

Triple-Shock[®] X BULLET[®]

Barnes' best-selling, classic all-copper bullet.

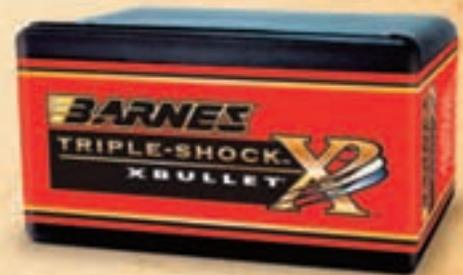

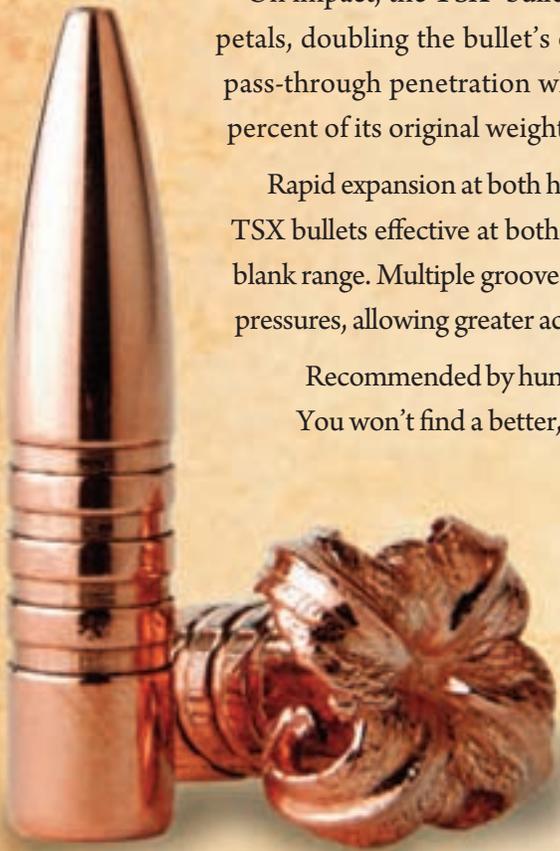

The Triple-Shock[®] X Bullet[®] leaves conventional lead-core bullets in the dust. Opens immediately on impact. Amazingly effective on everything from thin-skinned antelope to large, dangerous game. This premium, all-copper bullet will drop a whitetail in its tracks or stop a charging buffalo. No bullet produces deeper, surer penetration.

On impact, the TSX™ bullet expands into four copper petals, doubling the bullet's original diameter. Delivers pass-through penetration while retaining virtually 100 percent of its original weight.

Rapid expansion at both high and low velocities makes TSX bullets effective at both longer distances and point-blank range. Multiple grooves in the bullet's shank relieve pressures, allowing greater accuracy and reduced fouling.

Recommended by hunting guides and African PHs. You won't find a better, more versatile bullet.

- Exceptional accuracy
- Better weight retention than lead-core bullets
- 100% copper construction
- Out-penetrates lead-core bullets
- No fragmentation
- Double-diameter expansion
- Available in factory ammunition

*Cole Peck took this amazing
desert sheep after drawing a
once-in-a-lifetime Utah tag.
He used a .300 RUM and
a 180-grain TSX bullet.*

Tipped TSX™ BULLET

Higher-BC version of the Triple-Shock X Bullet

- Higher ballistic coefficient
- Proven accuracy
- 100% lead-free
- Rapid expansion
- Complete penetration
- 99-100% weight retention
- Available in factory ammunition

Barnes' Tipped Triple-Shock® X Bullet® is a TSX bullet with a polymer tip. The streamlined tip boosts the ballistic coefficient (BC) for long-range shooting. Like the best-selling TSX, the Tipped Triple-Shock has an all-copper, lead-free body. Multiple grooves cut into the shank reduce pressures and increase accuracy.

Expands instantly on contact, even on thin-skinned game. Hydraulic shock disrupts vital organs, short-circuiting the nervous system for clean, quick kills. Delivers the deep-driving penetration needed for difficult frontal or rear-angling shots. Won't break up on heavy bones of the largest, toughest game. Expands into four copper petals, doubling the bullet's original diameter. Pass-through penetration creates massive amounts of tissue damage and blood loss.

For unfailing results, depend on the Barnes Tipped TSX.
Accept No Imitations.

From left, Joseph von Benedikt, "Rifle Shooter" associate editor; Thad Stevens, manager of the Barnes Ballistics Lab and Jessica Brooks, PR/Advertising for Barnes Bullets with Thad's New Mexico pronghorn. He used a 168-grain TTSX loaded in a .300 Weatherby Magnum. The range was 300 yards.

Lead-free bullets began with Barnes

Barnes MRX™ BULLET

The ultimate “do-anything”
bullet for big game.

Barnes' MRX™ Bullet features a patented Silvēx® core surrounded by an all-copper body. The dense, tungsten-based core makes MRX bullets shorter than their TSX and TTSX counterparts, increasing case capacity. Deep penetration—even through heavy bone—makes MRX bullets ideal for raking shots at large game. Streamlined polymer tip boosts BC for flatter long-range trajectory, and enhances expansion with longer-range shots.

On impact, the MRX expands into four tough, copper petals, doubling the bullet's original diameter. Creates maximum shock and tissue damage. Effective at short or long range. Multiple rings cut into the bearing surface increase accuracy and reduce fouling. Now available in 250-grain .338 MRX.

- Denser-than lead Silvēx core
- High retained energy at long range
- Rapid expansion
- Effective performance at all ranges
- 100% lead-free
- Full weight retention
- Available in factory ammunition

Stan Golub shot this Okhotsk snow sheep, a pending world record, in Magadan Russia, South East Siberia. He used a .300 Weatherby Magnum firing 180-grain MRX bullets.

Expander MZ™ MUZZLELOADER

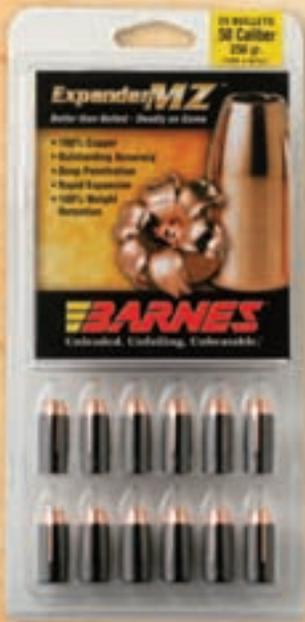

**Devastating expansion at both
high and low velocities.**

- 100% copper
- Deep penetration
- Double-diameter expansion
- Exceptional accuracy
- Full weight retention
- Recommended for in-line rifles

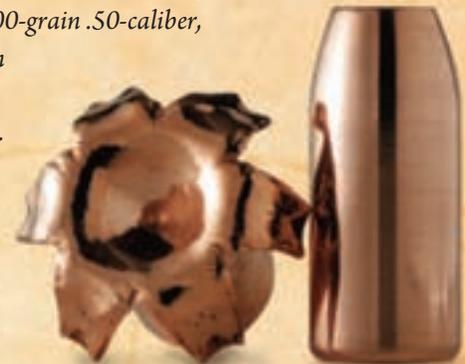

Like the revolutionary Barnes X Bullet, the Expander MZ™ is 100 percent copper. Its large, hollow cavity expands instantly on contact, creating six tough petals that double the bullet's original diameter. Snug-fitting sabot prevents gas blow-by, ensuring consistent shot-to-shot velocities and tight groups. More accurate than competing bullets, the Expander MZ gives you the confidence needed for sure, one-shot kills.

These tough, flat-based bullets typically retain 100 percent of their original weight while producing maximum penetration and tissue damage. Expand even at moderate velocities, delivering deadly performance at short or long range.

Barnes MZ **Aligner Tools** are recommended for loading all Barnes MZ, Spit-Fire MZ, TMZ and T-EZ bullets. These specially designed tools align the bullet properly with the bore, speeding the loading process and enhancing accuracy. A separate Aligner Tool is required for each caliber and bullet nose configuration.

Expander MZ bullets are available in 195-grain .45-caliber, 250- and 300-grain .50-caliber, and 275- and 325-grain .54-caliber sizes in 15- and 24-bullet packs.

MZ Aligner Tools are individually sized to fit Barnes' .45, .50 and .54-caliber Expander MZ bullets. A separate Aligner Tool is required for each caliber and bullet nose configuration.

Spit-Fire MZ,TM TMZTM & T-EZTM

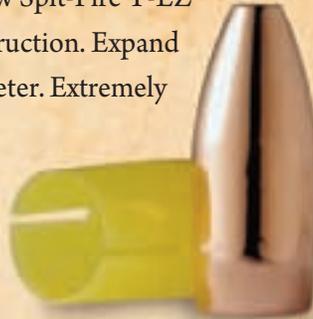

The deadliest muzzleloader bullets money can buy.

Barnes' Spit-Fire MZ, Spit-Fire TMZ and new Spit-Fire T-EZ bullets share the same 100-percent copper construction. Expand instantly on contact, doubling their original diameter. Extremely effective at extended range.

The **Spit-Fire MZTM** creates maximum penetration and tissue damage; typically retaining 100 percent of its original weight.

Barnes' **NEW Spit-Fire T-EZTM** muzzleloader bullets load easily, even in tight or fouled bores. These flat-base bullets deliver the same match-grade accuracy Barnes' MZ bullets are famous for. Polymer tip enhances expansion and boosts BC for superior long-range ballistics.

The **Spit-Fire TMZTM** has a streamlined polymer tip and a boattail base, providing a higher ballistic coefficient for flatter, long-range trajectories. Remains intact at extreme velocities, yet expands at only 1050 feet per second.

- Outstanding accuracy
- 100% copper (except for polymer tip)
- Deadly at high and low velocities
- Double-diameter expansion
- Deep penetration

Spit-Fire MZ available in .50 caliber, 245- and 285-grain bullets in 15- and 24-bullet packs.

TMZ and T-EZ available in .50 caliber, 250- and 290-grain bullets in 15- and 24-bullet packs.

Spit-Fire TMZ

New Spit-Fire T-EZ

Bob Grace chose the new 50-caliber 250-grain T-EZ bullet for his hunt in Nevada. He bagged this great mule deer that scores 185 B&C.

Barnes XPB™ PISTOL BULLETS

**Outperforms lead-core bullets
right down the line.**

- Proven X Bullet technology
- 100% copper construction
- Out-penetrates jacketed lead-core bullets
- Double-diameter expansion
- Remains intact – no fragmentation
- Available in factory ammunition

Developed from Barnes' famous X Bullet, XPB™ Pistol Bullets are 100 percent copper. They leave no lead residue behind.

Deep penetration and rapid, double-diameter expansion make these bullets a superior choice for hunting. They won't fragment—these bullets typically retain 100 percent of their original weight.

XPB bullets designed for .454 Casull, .480 Ruger, .475 Linebaugh, .460 S&W and .500 S&W Magnum revolvers are ideal for moose, elk and other large animals. In .357, .41, .44 magnum and .45 Colt calibers, they're effective on deer, antelope and smaller game.

These lead-free bullets are ideal for use in environmentally restrictive areas. They're in full compliance with California game laws, and should be acceptable in other states considering lead bullet bans.

*Joyce Wilson, of Wilson
Combat, used a .480 Ruger
firing 275-grain XPB bullets
to take this handsome
wildebeest.*

Lead-free bullets began with Barnes

Barnes MPG™

MULTI-PURPOSE GREEN

Combines pinpoint accuracy with explosive fragmentation.

Developed with military and law enforcement technology, Barnes' MPG™ Multi-Purpose Green bullets have a compressed copper-tin powder core surrounded by a gilding metal jacket. They meet lead-free requirements at environmentally restrictive practice ranges. The open-tip bullets hold together at ultra-high velocities and extreme rates of spin. They deliver pinpoint accuracy. Instant fragmentation produces low penetration and reduced ricochet potential.

The 55-grain .224" MPG bullet is designed for firearms with rifling twist rates of 1:9" or faster. A 140-grain .308" version is suitable for rifles with 1:12" or faster twists. Thanks to their protective jackets, MPG bullets remain

intact under the rigors of handling, feeding and firing. This eliminates the primary cause of jammed actions and plugged barrels often experienced with frangible ammunition in autoloading rifles.

These extremely accurate, Multi-Purpose bullets are ideal for shooting steel targets, competition, plinking, hunting and home defense. Now available in a 108-grain 7.62x39mm MPG version.

- Military technology
- Lead-free "Green" construction
- Low penetration
- Ricochet resistant
- Precision accuracy

Available in 100-round boxes (.224") and 50-round boxes (.308" and .310").

Barnes' MPG bullets deliver pinpoint accuracy and leave no exit holes to damage valuable hides.

Varmint Grenade®

**Spectacular accuracy,
explosive fragmentation**

- Exceptional accuracy
- Ricochet free
- Lead free
- Remains intact at extreme velocities
- Preserves valuable pelts
- Factory-loaded in Black Hills and Cor-Bon Ammunition.

Available in .204, .224 and .243 calibers

Designed for shooting prairie dogs and other small game, the Varmint Grenade® is a flat-base, hollow-cavity bullet featuring a compressed copper-tin powder core. Encased in a gilding-metal jacket, the highly frangible core disintegrates on contact, effectively eliminating ricochets. Based on a design developed for military applications, the Varmint Grenade remains intact at ultra-high velocities. Virtually vaporizes ground squirrels and prairie dogs, even at extended range.

Produces the exceptional, long-range accuracy varmint hunters demand. The lead-free Varmint Grenade expends its energy early, often without exiting larger predators. Valuable coyote and bobcat pelts remain virtually undamaged. Now available in 30-grain Varmint Grenade for .22 Hornet rifles.

Bodey Maynard, 15, with Wyoming coyotes he shot with his .204 Ruger and 26-grain Varmint Grenades. Bullets disintegrated inside animals, leaving pelts virtually intact.

Solids™ AND Originals™

**When you only have one shot,
you can count on Barnes Bullets.**

BARNES BANDED SOLIDS - Dangerous Game Insurance

You can bet your life on Barnes **Banded Solids**™. Made from free-machining brass, these indestructible bullets track straight. They won't deform or deflect on heavy bone. The most dependable solid you can buy stops dangerous game in its tracks.

Multiple bands cut into the bullet's shank prevent excess pressure, eliminating concerns about damaging fine double-rifle barrels. Weight-matched with Triple-Shock X Bullets of the same caliber, Banded Solids can be interchanged with expanding TSX bullets without varying point of impact.

Banded Solid Spitzers are precision machined from the same tough material for maximum concentricity and consistent density. These highly accurate, match-grade bullets kill fur-bearing game cleanly with minimal damage to valuable pelts.

BARNES ORIGINALS™

Introduced in 1932, **Barnes Originals**™ still have a loyal following. Fred Barnes made them by pressure-forming a thick, copper tubing jacket around a pure lead core. These time-tested bullets are still available for selected cartridges like the .348 Winchester, .38-55, .375 Winchester and .45-70 Government.

- Virgin brass alloy
- Deep, dependable penetration
- Tracks straight – won't deflect on bone
- 100% weight retention
- No deformation

- Heavy copper-tubing exterior
- Pure lead core
- Deep penetration
- Controlled expansion
- Proven results

This bull elephant was killed by Byron Hodge, who used a .500 Nitro double rifle firing a 570-grain Barnes Banded Solid.

Barnes Bullets
