DO NOT CROSS

CCI LINE: DO NOT CROSS

WELCOME TO CCI®

THE LEADER IN RIMFIRE AMMUNITION

When you shoot CCI®, you always leave your mark. Whether you're on the wide open plains over-looking a prairie dog town, or shooting at the range, the evidence is obvious. You've chosen CCI for a reason, and your fellow hunters and shooters know that. They take note of your advanced, highly-specialized ammunition.

And just because you're pulling the trigger multiple times doesn't mean you're simply throwing some standard soft-points down range. It means you've capitalized on one of CCI's affordable, yet effective, rounds for high volume shooters. At CCI we pride ourselves on the fact that each load has a purpose, and gives you an advantage. We also offer outstanding primers and musket and percussion caps. New this year, we introduce Reenactment caps. Reenactors will love these tough four wing caps that feature an optimized explosive charge for use in replica muskets.

As you take to the fields and ranges this year, look for signs of fellow CCI shooters. Some clues might not be as obvious as the bright yellow tape you'll see in our new ads. But with a keen eye you'll begin to notice what sets you and your fellow CCI shooters apart. Maybe it's a one-hole group at the range, or some impressive plinking. Or better yet, it could be several wind-defying shots on small varmints.

Thanks for continuing to shoot CCI, and we hope you are able to connect with other enthusiasts this year. Best of luck, and be sure to stay in touch with The Leader in Rimfire Ammunition®, because you never know what's coming next.

CCI. VARMINT AMMUNITION

If you need forensic evidence to prove that CCI® varmint loads are explosive on impact, you must be shooting blindfolded. When you put the crosshairs on your target and pull the trigger, you'll witness the impressive terminal performance of these specialized loads. CCI's varmint lineup offers several loads in a variety of calibers that utilize unique bullet technologies to deliver what we covet most: devastating performance on varmints, time after time.

Our latest product development is TNT Green™. This 22 Mag offering gives varminters explosive performance and unprecedented accuracy. It is a unique combination that is delivered in a completely lead-free bullet and utilizes the most advanced non-tox bullet technology available. Our bullet design features a pressed-powder core that stores energy—only to be violently released on impact. And as a result, we get unbelievably explosive expansion. There are also other impressive rimfire loads like the 17 HMR V-Max®. This black-tipped bullet is driven to super-fast velocities in 17 HMR and 17 Mach 2. These high velocities translate to accurate, flat-shooting loads great for a variety of vermin. And don't forget about our Segmented Hollow-Point options. If you can't find your ideal rimfire varmint load on these pages, it doesn't exist.

V-MAX®

- Flat-shooting
- Accurate
- Explosive expansion

STINGER®

- Hypervelocity leader
- Loaded within industry standard pressures
- Anchors varmints fast

TNT®

- Explosive on impact
- Minimal mid-range rise
- Nearly identical point of aim to V-Max® in 17 HMR

TNT® GREEN™

- Lead-free bullet
- Impressive terminal effect
- Match-grade accuracy

MAXI-MAG®

- Clean-burning propellants
- Maximum velocities
- Utilizes sure-fire priming technology

MINI-MAG®

- Original CCI® offering, still the most popular
- Reliable feeding
- Clean-burning powder won't foul barrel

HOLLOW-POINT

- A CCI® original
- Great stopping power
- Reliable expansion

SEGMENTED HOLLOW-POINT

- Impressive terminal effect
- Bullet breaks into three-parts on impact
- Each segment creates its own wound channel

CCI.

SMALL GAME AMMUNITION

Take a look at pelts or small game harvested with CCI® ammunition, and you'll notice a few distinct qualities. Clean holes and minimal tissue damage are a constant because we design this ammunition with the hide and meat hunter in mind.

The GamePoint® bullet is one example of a product that boasts great terminal effects and superior stopping power, but minimizes hide and tissue damage. Available in both 17 HMR and 22 Win Mag, it gives shooters big game bullet performance. This bullet doesn't fragment and gets deep penetration. Another unique bullet option from CCI is the Small Game Bullet. The SGB provides more stopping power than round nose bullets, with less meat spoilage than hollow points. Choosing the right ammunition means meat in the pot. And if you use these options from CCI, we hope you have the vegetables ready.

GAMEPOINT®

- "Dimple-Tip" expands like big game bullet
- Minimal meat and hide damage
- Accurate, powerful

FMJ

- Punches clean holes
- Ideal "open area" bullet
- Very accurate

SGB

- Great stopping power
- Flat nose creates large wound channel
- Less meat spoilage

SUB-SONIC

- Low noise
- Bullet expands without fragmenting
- Great performance on small game

VELOCITOR® HP

- Excellent weight retention
- Impressive downrange energy
- Deep penetration

CCI. COMPETITION TARGET AND PLINKING

Spotting CCI® shooters on the range isn't hard. Look for tight groups or cans with several holes in them. Regardless of the target, our ammunition delivers. If you're competing, "decent groups" just won't do. That's why we offer a full line of ammunition designed for those in competition. Whether you're shooting a rifle or pistol, we have a high-performance load for you. We even offer a .22 Short target load especially for International Rapid Fire Pistol Competition.

CCI also understands there is a time when you just want to do a little plinking. When doing some relaxed shooting on the range, consistency and reliability are a must. Having affordable options that perform with the same ballistics as high-grade competition loads is also a plus. CCI's target/plinking collection provides loads that are great for heading out to the range for a little practice.

22 SHORT

- High velocity
- Copper-plated for clean bores
- Great accuracy, performance

PISTOL MATCH

- Proven accuracy in handguns
- Precision components
- Top-of-the line functionality

MAXI-MAG® TMJ®

- Consistent performance for plinking
- Utilizes sure-fire priming technology
- Jacket seamlessly encases lead core for accuracy

STANDARD VELOCITY

- Affordable practice
- Same velocity as Green Tag®
- Consistent performance

22 LONG

- A CCI® exclusive
- Only 22 long available
- Very reliable

SELECT™

- Outstanding performance in semi-automatics
- Impressive consistency
- Optimal velocity for accuracy

MINI-MAG®

- Original CCI® offering, still the most popular
- Reliable feeding
- Clean-burning powder won't foul barrel

SHORT TARGET

- Accurate and reliable to meet competition demands
- Specialized for IRF pistol competition
- Positive functioning without big recoil

GREEN TAG®

- Ultimate in accuracy
- Suitable for rifles or pistols
- Designed exclusively for competition

CCI. PEST CONTROL/SPECIALTY

Our specialized loads and attention to details are never more noticeable than with these options. Our pest and specialty offerings set CCI® apart from everyone else. Pests can be hard-to-hit problems, even at close range. For situations like this, CCI® offers rimfire, as well as centerfire pistol, shotshell options. These rounds provide increased effectiveness over single projectile loads. For rimfire enthusiasts, CCI has optimized 22 LR and 22 WMR options.

CCI also offers a few "specialty" loads for very specific applications. By carrying these loads, we demonstrate our ability to cater to a broad range of shooters. For the times when pest control requires a heavier projectile or a longer range than our rimfire shotshells, use our 22 Short CB load. It means less noise and great accuracy for smaller targets.

RIMFIRE SHOTSHELL

- Consistent patterns
- Easier hits on pests
- Only 22 WMR shotshell load on the market

CENTERFIRE PISTOL SHOTSHELL

- Great for close-range pest control
- Packed in reusable boxes of ten shotshells
- Available in a variety of calibers

WRF HOLLOW POINT

- 19th Century favorite with 21st Century technology
- Only 22 WRF in the industry
- Copper composition and special base make it ideal for old barrels

CB

- More effective at longer ranges on pests
- Accurate
- Great plinking loads

NOISE BLANKS

- Great for training
- Clean-burning propellant
- Work in any firearm chambered for 22 Short, Long or Long Rifle

RIMFIRE CONSTRUCTION

Rimfire cartridge illustration shown here is the 22 Long Rifle Mini-Mag™, part number 0030.

CCI RIMFIRE TIPS FOR SUCCESS

- **Safety first when shooting!** Always wear eye and ear protection. Rimfire bullets can travel up to two miles. Treat every rimfire firearm with the same respect you afford your most powerful rifle or handgun.
- **Match your ammunition to the sport.** Choose solid lead or TMJ® bullets for edible game, hollow points for varmints and lead round nose for competition shoots. See the rimfire reference table for usage recommendations.
- **Sight in most hunting rifles for 50 yards.** The bullet rise between the muzzle and 50 yards is very small, so you can use the same sight picture over that range. For open-country varmint shooting, consider a 75 yard sight-in for 22 Long Rifle, and a 100 yard sight-in for the Magnum rimfires.
- **Clean that gun!** Most rimfire malfunctions can be traced to poor gun maintenance. When you clean the bore, also clean the action. Excess residue or lubricant in the action can cause misfires and feeding problems.
- **Gun condition is everything!** There are many poor quality or badly worn 22 rimfire firearms in circulation that should have been rebuilt or retired years ago. Shooting them with ANY ammunition could be hazardous. When in doubt, consult the firearm's manufacturer or a competent gunsmith.
- **Revolvers have barrel/cylinder gaps.** The industry MAXIMUM permissible gap is a mere 0.012 inch—that's just three sheets of standard copier paper. A gap larger than this can mean a bullet fails to leave the barrel, resulting in a hazardous barrel obstruction. Revolvers with oversized gaps must not be fired with ANY ammunition until repaired.
- **Try different types of ammunition when looking for accuracy.** There are many makes of rimfire firearms with a wide variety of rifling patterns. That makes them very sensitive to the ammunition type. CCI® has plenty of choices to help you in that quest.
- **Take care of your ammunition.** Store away from moisture, heat, and oils. Keep ammunition in the original boxes. CCI's innovative plastic box protects ammunition better than the cardboard boxes other companies use.

CCI. PRIMERS

Reloaders don't have to look any further than CCI® for their primer needs. With a complete line, we've really got something for everyone. The mainstays of reloading, our Standard Rifle and Pistol Primers are remarkably reliable and clean-burning. This means primer pockets stay cleaner and there's no question of performance. If you're trying to wring the last bit of accuracy from your target loads, be sure to use our Bench Rest Rifle Primers. They are assembled with extra care so each primer fires exactly like the one before. We also offer in-line muzzleloading and shotshell primers, as well as primers in APS® strips. We even carry percussion caps featuring modern, non-corrosive, non-mercuric priming.

New for this year are our Reenactment Caps. These tougher four wing musket caps feature an optimized explosive charge for use in replica muskets.

209 IN-LINE MUZZLELOADING PRIMERS

- Optimized for muzzleloading
- Reduce fouling
- Formulated to ignite in humid conditions

STANDARD RIFLE AND PISTOL PRIMERS

- Clean-burning
- Meet majority of reloading needs
- Unprecedented reliability

BENCH REST RIFLE PRIMERS

- Precision ignition for tough competition
- Assembled with extra-care for consistency
- Ultimate in accuracy

MAGNUM RIFLE/PISTOL PRIMERS

- Provide extra heat and ignition power
- 20% hotter flame to light propellants in toughest hunting conditions
- No loss in sensitivity

FOUR WING MUSKET CAPS

NEW!

- Tough four wing design
- Lighter explosive charge
- Designed especially for reenactment

PRIMERS IN APS STRIPS

- Available for most popular primers
- Speeds up reloading process
- Offers protection for primers

PERCUSSION CAPS

- Non-corrosive, non-mercuric priming compounds
- Choice of styles
- Assembled with soft, ribbed copper cups

SHOTSHELL PRIMERS

- 209 is designed for standard field and target loads
- Reliable, clean-burning
- Fit all modern shotshell cases with 209 primer pocket
