**LaserMax gives discounts to our Law Enforcement, Military, and NRA Instructor customers!**

## Don't just choose a Laser, choose a LaserMax.

At LaserMax, we know that true confidence comes from comfort with your gun. Depending on your application and training level, you may need different features. We offer the full range of lasers, all with superior design and value.

Our **guide rod lasers** are the top-of-the-line. They are used in semi-auto pistols for people who have to get down and dirty and do the hard thing, our avenging angels. Guide rod lasers are extremely rugged, reliable, lightweight and completely internal. The guide rods are easily installed in minutes. The user must be familiar enough with his or her own gun to field strip in the same manner as they would to clean their gun. We make the guide rod lasers for tactical pistols in the following makes: GLOCK, Springfield XD, SIG SAUER, Beretta, Taurus, Colt, Kimber and other makers of the 1911-A1. Guide rod lasers are available in infrared to qualified law enforcement and military. Contact the factory at [LEsales@lasermax.com](mailto:LEsales@lasermax.com) or [militarysales@lasermax.com](mailto:militarysales@lasermax.com) for details.

For those who prefer an **external laser**, LaserMax introduces the NEW Sabre™ series, designed for GLOCK pistols. The Sabre™ is easy to maintain and install, without field stripping your gun. The combination of its ergonomic features that stabilize your hand during recoil and its laser precision will truly enhance your shooting ability.

Shooters looking for the simplest solutions for concealed carry or personal defense use the J-Max™ series for Smith & Wesson J-Frame revolvers. J-Max™ lasers also work great for the family defense gun, and improve the shot placement with any snubby.

And for those shooters who own a gun with a **Picatinny** (M1913) or Weaver rail 1.75" and longer, we present the laser solution with ultimate versatility: the Uni-Max® series. Uni-Max® fits pistols, carbines, rifles, shotguns and much more! The Uni-Max® is a laser inside a Picatinny rail, so you don't give up any rail space at all – you can mount tactical lights and other gear onto the Uni-Max®. Available in red and high visibility green. Uni-Max® are also available in infrared to qualified law enforcement and military.

LaserMax also manufactures the **Colt® CGL™** for Colt Defense. The CGL™ is a fore grip laser coupled with a navigation light which mounts directly onto the M1913 Picatinny rail of the black rifle. This handy product not only provides better stabilization of the rifle while shooting, it also delivers precision accuracy while enduring the recoil and heat generated by the rifle.

# Bring it on!

*LaserMax Guide Rod Lasers have benefited from fifteen years of street and combat experience, plus state-of-the-art advancements recommended by SWAT, Special Forces, federal agencies, Presidential Security Services, and many other top tier forces. As a result, LaserMax Guide Rod Lasers are the most technologically advanced, hardened laser systems in the world. LaserMax Guide Rod Lasers are the only lasers that meet or exceed these military and law enforcement tests:*

- Department of Homeland Security blowing sand test
- US Navy and Marine Corps corrosion test (salt water fog test)
- Extreme high temperature operation

- US Navy Seals: submersion to 66 feet in salt water for two hours
- Extreme low temperature operation

- US Military and National Institute of Justice live fire tests
- Six foot drop to concrete, various angles of gun
- Passed DOJ & NIJ drop tests

**Plus:**

- **Extreme live fire (20,000 rounds and up)**
- **Five-story drops to concrete, various angles of gun**
- **Crushed by 20 ton vehicles**
- **Freezing in blocks of ice, roasting in flames ... Explosions and more ... see [www.lasermax.com](http://www.lasermax.com)**

# You need a LaserMax!

Whether you are protecting home & family, patrolling a beat, or defending the homeland, a LaserMax can give you the extra confidence and tactical advantage you need.

### Control the night

The LaserMax sight is designed for use outdoors between dusk and dawn, and indoors around the clock. It is the highest brightness laser commercially allowed by the FDA.

The LaserMax sight greatly assists aiming in low light and stress fire conditions. While shooting speed and accuracy are vastly improved, often users report that suspects give up their threatening behavior when they see the pulsating dot. When a shot must be fired, users report near perfect hit ratios, even in stress fire situations.

### Compensate for diminishing eyesight

Between the ages of 40 and 50 years we start to lose the ability to change focus from distant to close objects. Many shooters give up when this happens. Don't! Just use the LaserMax sight, and focus on the target where you see best.

### Take advantage of cover

The LaserMax sight allows accurate shooting from behind cover and concealment. Use full cover behind

ballistic shields, automobile engine blocks and other available barriers. Should you have to shoot from a prone position or with your weak hand, your LaserMax sight still affords accurate shot placement.

### Train faster

The LaserMax sight helps new shooters learn sight picture and trigger control much more quickly. Trigger and muzzle discipline are readily reinforced, through both live and dry fire. The unique LaserMax features promote good firearm safety habits.

### Transcend all language barriers

Everyone knows what the pulsating red dot means. No matter what language they speak, the assailant knows they've been targeted. The good guys know you've got them covered, too. The whole picture changes when you turn on that pulsating red dot.

# Guide Rod Lasers: In Use by Elite Forces Worldwide

## The **LaserMax** Internal Advantage!

LaserMax is the only maker of the Internal Guide Rod Laser system. This patented design offers many tactical advantages...

### **Ruggedness**

The installed LaserMax Guide Rod Laser sight is as rugged as the firearm, and can even sustain repeated drops onto concrete.

### **Reliability**

Your LaserMax Guide Rod Laser sight comes permanently aligned from the factory\* for center-of-mass accuracy at 20 yards. It will never drift out of alignment. There is no need to re-zero after changing batteries.

\*1911 models are user-adjustable.

### **Accuracy**

The LaserMax Guide Rod Laser sight installs as close to the bore of the firearm as possible. This ideal positioning allows for the closest and most consistent relationship between your point of aim and point of impact (POA/POI) over all shooting distances. This is important in real-life situations where the attacker will most likely be moving.

### **Control**

With a LaserMax Guide Rod Laser sight, YOU control the beam. Our systems feature a distinct on-off switch that can be easily activated by both right-handed and left-handed shooters. There is no need to alter your grip and compromise your shooting accuracy to activate the beam. In addition, your position will not be revealed by a laser turning on before you're ready.

### **Easy Installation**

Installs in minutes. No gunsmithing required.

### **Safety**

Law enforcement, military and NRA instructors all train "indexing" or Universal Cover Mode (UCM).

In UCM, the index finger should be positioned along the side of the frame of the firearm during aiming until the decision has been made to shoot. Failure to practice UCM can result in a negligent discharge as a result of startle response, balance disturbance, or sympathetic reflex. Magazine drops and accidental discharges have occurred with grip-activated and trigger guard lasers, sometimes with tragic results. With a LaserMax Guide Rod Laser sight, the activation switch is exactly where your index finger should be for safe operation and your index finger will not interfere with the laser beam.

**Universal Cover Mode (UCM)**

### **Increased Visibility**

Scientific studies of the human visual system have confirmed that the human eye detects pulsating objects more quickly than constant objects. This is why emergency vehicles and navigation lights pulsate. The LaserMax beam pulsates for increased visibility by both the shooter and the targeted. Even in peripheral vision, you will always know where your muzzle is pointed. The benefits

are well worth the extra expense we put into our electronics to make them pulsate!

### **Compatible**

LaserMax Guide Rod Laser sights do not alter your pistol's dimensions, so you can count on a proper fit when slipping your handgun into most holsters made for it, from a handmade custom design by Cutt's Custom Leather to SAFARILAND's ALS paddle holster.

**User Adjustable**

Due to the many variations of 1911 government models, LMS-1911 sights are user-adjustable for windage and elevation.

**Turn It On!** (Smith & Wesson M&P)

To activate the laser, simply rotate the lever on the slide stop. Pointing back is off; pointing down is on.

**Turn It On!** (Beretta / Taurus)

To activate the laser, simply push IN on the switch pin, which is located inside the takedown lever. Pushing in from either side will turn the laser on; the middle position is off.

**Turn It On!** (1911)

To activate the laser, simply rotate the lever, which is located on either side of the slide stop. Pointing back is off; pointing down is on.

**Models:** Now available in "IR" (Infra-Red) for Military & Police use with night-vision goggles only - Call for details. Check [www.lasermx.com](http://www.lasermx.com) for updates.

Sabre on Glock 17 in Blackhawk CQC (C1200) locking holster

**Now Available**

## LMS-SA-GF

**For:**  
Glock 17/17L/18  
22/24/31/34/35/37

Also available for  
GLOCK 19/23/32/38:  
LMS-SA-GC

## Ergonomic!

Sleek, contoured design feels good in the hand when firing. Extended beaver tail stabilizes your hand hold against recoil.

## Easy to Install!

Just use the punch provided to remove pin, slip on the Sabre™, and insert LaserMax pin. Align for windage and elevation and you're good to go!

## Select your Mode!

Master switch at back of extended beaver tail sets beam for off (left), continuous on (middle) or Hi-Vis pulsating for fastest acquisition (right).

## Easy Battery Change!

Batteries go in extended beaver tail. Laser alignment will not be affected by changing batteries.

## Turn It On!

With Master switch set either to Hi-Vis pulsating or continuous on, grip your gun as you would normally. Switch engages automatically, disengages when hand is removed. Beam will not light when Master switch is set to "off".

# Smith & Wesson Models

»» SIDE MOUNT  
Lasers

LaserMax LMS-JMX-H shown in the Blackhawk CQC Serpa locking holster

## Shoot Better, Every Time!

Enhances shooting accuracy with S&W J-frame revolvers. Adjustable windage and elevation settings for precise alignment.

## Better by Design

We have the laser in the right place for your J-frame! Positioned high along the bore line for maximum shooting accuracy, you never have to worry about blocking the beam with the LaserMax J-Max™ laser. Your trigger finger is along the frame until you are ready to discharge the firearm, in keeping with firearms safety training.

## Don't Give yourself Away!

Touch buttons on either side of the grip give you the on/off control - highly desired in a tactical or personal defense situation!

## Turn It On!

The J-Max™ can be activated from either side. Press the button once and the laser activates, press it again and it turns off. Firing grip is maintained while turning laser on/off for maximum accuracy!

**New**

### LMS-JMX-NH

**For:**  
Most round butt, fully enclosed hammer J-Frame styles

### LMS-JMX-H

**For:**  
Most round butt, exposed/shrouded hammer J-Frame styles

## Select your Mode!

Choose from Hi-Vis pulsating beam or continuous wave (constant on) beam. Highest laser power output commercially available.

## Feel The Difference!

Recoil absorbing Santoprene® grips with low profile design contoured to your hand. Handy compartments for your alignment tool and a spare set of batteries, too! Battery changes will *not* change alignment!

# Uni-Max<sup>®</sup> Models (Red)

## The Ultimate Multi-Mission Tool:

The Uni-Max<sup>®</sup> is small as a matchbox! The Uni-Max<sup>®</sup> Red weighs no more than a .45 ACP round! Super rugged, the Uni-Max<sup>®</sup> can also go diving to 66 feet and survives multiple drops to concrete! We even baked ours to 350° Fahrenheit! It still works! A super-reliable, super-handy, little laser.

## Ultimate Versatility:

The Uni-Max<sup>®</sup> fits all Picatinny (M1913) rails and Weaver rails 1.75" and longer. Use on pistols, carbines, rifles, shotguns and more.

**Handy features:** Adjustable windage and elevation setting for precise alignment. Choose from Hi-Vis pulsating beam or continuous wave (constant on). Highest power output laser commercially available. Maintains alignment through battery changes. Optional momentary activation switch comes in 6 and 10 inch cords.

## LMS-UNI

**For:**  
Picatinny &  
Weaver Style Rails  
(minimum 1.75" rail)

### Keep all your rail space!

The Uni-Max<sup>®</sup> is a laser inside a Picatinny rail. Mount gear on it! Tactical Lights and other lasers easily fit on top.

H&K proprietary Rail Adapter for USP series

Uni-Max® on H&K with Rail Adaptor

## Just a Few Things You Can Do With Your Uni-Max®!

Uni-Max® on Leupold CQC rifle scope

Uni-Max® on Meade EXT-90 Maksutov telescope

Uni-Max® on M-4 (shown with optional Momentary Activation Switch and Grip Pod)

Uni-Max® on Canon 12x36 Stabilized Binoculars

Uni-Max® on Mossberg 500 series Persuader

Uni-Max® "sandwiched" between S&W M&P and tactical light

Uni-Max® on Taurus 24-7

Uni-Max® on Compound Bow

### Turn It On!

To activate laser, simply push IN on the serrated tab switch. Pushing in from either side will turn the laser on; the middle position is off. Or, if you prefer, use the optional momentary activation switch, especially useful on long guns.

## Uni-Max® Green Laser

### LMS-UNI-G

**For:**  
Picatinny or weaver Style Rails,  
with a minimum length of 1.75"

### Green is the ultimate tactical color.

Whether you're running port security, investigating the noise in the garage, or engaged in combat in urban terrain, green transitions from light to dark and back again better than any other color.

**Low drag:** The LaserMax Uni-Green™ puts out the highest power laser beam allowable by law from a package that is smaller than a matchbox! It fits on all Picatinny and Weaver rails (minimum length: 1.75") and weighs less than an ounce (with batteries!). In fact, the LaserMax Uni-Green™ has its own Picatinny rail, it is a green laser inside a Picatinny rail! You can mount it on pistols, carbines, rifles, shotguns, full autos, night vision gear, binoculars – anything with a Picatinny or Weaver rail. It doesn't consume any rail space because you can mount gear on top of it!

**Rugged:** We can take the recoil. Tested with thousands of rounds on punishing weapons including AR-15s and shotguns, the LaserMax Uni-Green™ performs flawlessly. The Uni-Green™ has also been mounted on firearms and put through multiple six-foot drop tests onto bare concrete, again without affecting the laser.

**Precise:** Windage and elevation are adjusted with a small Allen wrench (included). LaserMax provides generous adjustment to accommodate the many mounting configurations. The Uni-Green™ holds alignment within 0.5 inch at 25 yards on all weapons tested.

➤ Law enforcement and military customers are encouraged to call the factory for special applications.

### LMS-UNI-MAS-6 & LMS-UNI-MAS-10

Optional momentary activation  
switch comes in 6" and 10" cords.

# HIGHEST VISIBILITY IN ALL LIGHTING CONDITIONS!

## Whether it's bright or dark, our eyes see green best

Our eyes see green better than any other color in any lighting condition. In the daytime, we see all colors well, but we see green the best. This is shown in the graph on the right: our peak visibility is green. This means for the same amount of light output, green looks brighter to our eyes. When our eyes are dark adapted, our sensitivity shifts slightly towards the blue, but we still see green better than any other color. This is called the Purkinje effect. It takes much more optical power to see red or blue than it does to see green under any conditions.

## It isn't easy being green

Current diode laser technology does not give green light. LaserMax uses sophisticated techniques using multiple crystals, filters and other optical components to convert commercial laser diode output into green light in the smallest package commercially available.

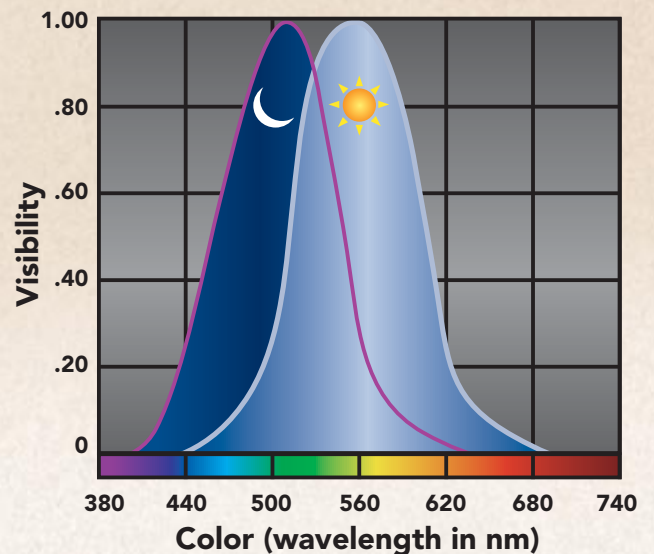

## Some things you should know

**Eye safety:** The fancy optical filters are expensive, but they are important! Green laser technology emits harmful infrared light that can damage the eye. LaserMax filters the infrared out of the Uni-Green™ so you (and anyone who is on the receiving end) is safe from eye damage. Buyer beware. Many manufacturers do not use filters.

**Recoil:** Green lasers are much more complicated to build than red, blue, or infrared. They can't all take the recoil. Buyer beware. Most green lasers are not built for live fire.

**Temperature:** Green lasers are sensitive to temperature. Most will work between 50-70 degrees Farenheit. LaserMax uses proprietary technology to extend the range of operation to 40-100 degrees Farenheit, making the Uni-Green™ practical for temperate climates, home defense and indoor public spaces (law enforcement).

**Power output:** To compensate for temperature sensitivity, some manufacturers exceed the output power allowed by law. Even green light can damage the eyes if it is too bright. You can be assured that the LaserMax Uni-Green™ is completely eye safe and compliant with FDA regulations.

# Colt Grip Laser (CGL)

- CGL-RR – CGL w/ red navigation light (Colt part# 99700)
- CGL-RW – CGL w/ white navigation light (Colt part# 99698)
- CGL-RB – CGL w/ blue navigation light (Colt part# 99699)

➤ Lasermax is proud to be building the CGL for Colt Defense the leader in Black Rifle technology and the supplier of the M4 carbine for the U.S. military.

**New**

## Introducing the most functional foregrip available!

The CGL is a rugged, versatile foregrip with an integrated powerful 5 Mw 635nm red aiming laser and a LED traveling light. The foregrip attaches to the Picatinny (M1913) rail mount system with an American Defense Locking mount. The laser can be switched from Hi-Vis pulsating to steady modes via the selector switch on the back of the CGL.

## Rugged, reliable, and ready for action!

Classic style foregrip is made from a tough glass-fiber filled nylon specifically designed to take heat and shock due to weapons firing for many thousands of rounds. The CGL passes both the DOJ and NIJ standard for drop tests. The laser is adjustable for windage and elevation 120" of windage and 120 inches of elevation at 100 yds. with tool. (Included; spare tool under the battery plate.) Choose from Hi-Vis pulsating beam (which helps to contrast it from your red dot optical sighting system or continuous wave (continuous on). The CGL is powered by two (2) AA batteries. Battery life is 60 hours (Hi-Vis mode) or 30 hours (continuous wave).

### Turn it on!

Select a mode with the switch on the back, and apply pressure to activation switch for momentary activation. Fully depress for continuous use. Fully depress again to deactivate.

### Pg. 16 Specification Notes:

- <sup>1</sup> IR Lasers drop ship to Law Enforcement and Military ONLY. Please call factory for details.
- <sup>2</sup> For proper alignment: If slide is labeled STAINLESS, use the LMS-2261S. Disregard the actual finish because some blued slides are labeled STAINLESS.

For multiple CGL purchase for resale, or to outfit a law enforcement agency or military unit, contact Colt Defense at 800.241.2485

Please contact us if you do not find your gun listed below or visit [www.lasermx.com](http://www.lasermx.com) for a full listing of products.

	LMS-2x13N	Lithium for Uni-Green™ Only
	LMS-10x13N	5 pack Lithium for Uni-Green™

	Part #	Compatibility
Accessories	LMS-UNI-MAS-6	Momentary Activation Switch for Uni-Max® (Red & Green) - 6" straight cord
	LMS-UNI-MAS-10	Momentary Activation Switch for Uni-Max® (Red & Green) - 10" straight cord
	LMS-HKADP-C	HK rail to Picatinny rail adapter for compact HK-USP
	LMS-HKADP-F	HK rail to Picatinny rail adapter for full-size HK-USP

## Accuracy

Guide Rod Lasers +/- 2"POA (at 20 yards)  
 \*Springfield XD & Compact GLOCK models are +/- 3" POA  
 \*All 1911 sights are user adjustable  
 All external lasers are user adjustable

U.S. Patent Nos. 4,934,086 5,509,226 & 6,591,536. European Patent No. 0431097.  
 Other worldwide patents pending.

# Write us and tell us what YOU do ...

"I'm convinced your LaserMax system in my Beretta saved someone's life a couple a days ago. We took a convoy in the heart of Kabul city since the place we were going had very little to no parking we had to take Ford Ranger PUs rather than our up armor Humvees. This SUV was following us at a high rate of speed driving very erratic just as suicide VBIED driver acts. He finally got close in an attempt to pass, I was in the last vehicle and lased him in the chest through the window. Needless to say he backed off once he realized I was a hard target. Thank You for your product!"

F. F., LTC, EN, USA

"I have purchased a LaserMax for my niece who is a CW2 Army pilot over in the sandbox...she tells me the laser is built like a tank, having survived numerous "assaults", and still going strong...even her pistol skills are better (I didn't think that was possible for a female pilot) ... anyway, Semper Fil!"

"I have utilized my LaserMax twice in the past three months, once while I had to shoot out a suspect's tire as he was trying to run me over, and then on a felony pursuit/stop where I almost had to fire at the driver. Being a firearms/SWAT instructor, I find your product among one of the best I have ever purchased. It is without a doubt the best aiming assist tool I have ever used, and helps greatly in instant target acquisition, and the psychological benefit is outstanding."

C. N., Chief, Police Dept. in Tennessee

"I have been to the range a second time. Using only the laser I put ten shots at 10 yards in a "single" hole, the size of a half dollar. I did this twice, a third time all ten shots were straight up and down in a line about 3 inches high-almost all the holes were touching. I would not consider myself good with a pistol, but this is just awesome shooting for me."

Richard, Michigan

"It made a believer out of me. It saved at least one man's life, as he was charging me in a junk yard with his welding gear on and a metal pipe in hand! It was dark, and I don't know that he would have seen my Glock pointed at him, but without question he saw the Laser Max; he stopped cold, dropped the pipe, and threw his hands in the air."

"Just a Thank you note. I got the part. You guys not only got a great product, also the greatest service."

I. B., Retired Peace Officer

"I got to use the laser again, this time in a unique situation. A pair of armed suspects fled officers after reports of shooting out windows. (The guns turned out to be Walther PPK bb guns). One was tackled after throwing his gun down. The other vanished into the woods. During my search, I located a drain pipe the diameter of a car tire. I turned on my M3 and Laser Max and looked inside. Twenty yards down the pipe, a pair of feet were scurrying to escape my view. I brought the laser dot to the suspects attention and asked him if he could see it. He said "Yeah I see it, don't shoot me" I told him that "You know I've got you, don't do anything stupid." He said okay and agreed to turn around and shuffle out of the pipe. I have no doubt that the laser dot was what convinced him to surrender and come out. I was not excited about the idea of having to go in after him."

B.M., Georgia Police Dept.

"About a year ago I purchased a LaserMax for my duty gun a Springfield XD 40. This thing flat out rocks. I would never buy a gun again without a LaserMax laser. Thanks for a great product."

N.S., Wisconsin

## Our loyal Customers say it best.

"As a law enforcement officer of 7 years and the Team Leader of my department's Special Response Team I have nothing but praise for LaserMax. I added the LaserMax because I've always worked the midnight shift and I've seen the effect it has on a suspect. It is extremely beneficial on the S.R.T. Team because I can be certain of my point of aim-point of impact without the loss of my peripheral vision. It has saved lives by giving me the edge I needed to stay alive as well as save lives no matter what side of the law they were on."

Sgt. C. S., Sheriff's Office in Georgia

“We purchased 78 sighting systems for our new Sig Sauer .40 caliber handguns. We have issued a laser to all sworn personnel and have found a vast improvement in shooting accuracy. During our test and evaluation of the LaserMax we found a 70% improvement in shooting accuracy during point and shoot drills at combat distance. We expected an improvement in accuracy with a laser sighting system, however, a 70% improvement was not considered to be possible. This improved accuracy has carried over to the entire department and is remarkable...Our officers continually rave about the LaserMax system. We would recommend the LaserMax to any department looking into a laser sight. You have been a pleasure to work with.”

Capt. G.G., Law Enforcement Officer, Michigan

“I installed a Laser in one of my midnight patrol officer’s gun and that same night he had a pursuit of a stolen car w/drugs. When the perps bailed out the officers yelled at them and not knowing if they were armed the officer activated his Laser on the driver. He [the perp] fell to the ground screaming “PLEASE DON’T SHOOT ME”, “I’M SORRY”. The passenger ran but was later subdued by the other responding officers. The driver immediately stopped his aggression when he saw the Laser on his chest. The other officers did not have their lasers installed yet and had to run after the other perp. Now even the skeptical officers wanted their lasers installed ASAP. One even came to my house to have it installed. Just for a laugh!!”

E.O., Ofc.

THANK YOU! I work a 12 hour night shift with a rural Sheriffs Department. I have come to depend on the LaserMax sight in my Glock 22. It recently developed a problem. I called, your tech was very helpful, and within two days I had the part that I needed. My weapon sight is back working. Customer service as it should be.”

A.W., Trainer CCSD, Tennessee

“I have utilized a laser in both arenas in the capacity of law enforcement and with the Army in Iraq. I can say with 100% certainty; that small red beam does speak an international language.”

C.H., Missouri

“Been using LaserMax since its conception on an early model smooth side Glock 17. Have fired so many rounds through the barrel that Glock replaced my service barrel free of charge. Just wanted to let you know the laser is still going strong. When the dept. elected to go .45’s I ordered LaserMax for my G21-G30 and G36. - Thanks for an outstanding product.”

L.E., Officer P.D.

“A friend told me about it and it sounded great. I saw the product and it made sense to buy it. I have it on a Glock 27, and all I can say is “This is Hot S\*\*\*!” I wish I had this prior to my retirement with the Sheriff Dept..... in the event you have to use your firearm, there would be a strong possibility that the suspect would stop, retreat, or stop just enough to think where you would have the time to place a couple of the first shots. I would strongly recommended that all law enforcement officers have this item as standard equipment.”

J.R., Retired Southern California Sheriff Dept.

“I purchased a LaserMax laser for my model 17 Glock about 7 yrs ago when I was in the academy, I then placed it in a model 22 Glock after approximately 20,000 rounds with no problems. I also have put that many rounds

through the model 22 (if not more) without one malfunction of the unit. I wanted to write and commend the company and their support staff on a wonderful product. I began showing wear on the battery cap for my unit and called LaserMax and spoke with [sales]

about my problem. Within 48 hrs. I had a new cap and a set of batteries for my unit. This is excellent service and a company that stands behind their product.”

F.L., Police Officer

“I was deployed in support of Operation Enduring Freedom as the commander of the personal security detail for the commander of the ground forces there. I purchased the LaserMax sight for my SIG-228 prior to deploying. Initially, I was worried about how it would stand up to an extreme environment where the sand and dust play a huge impact on equipment. Prior to deploying I went through a couple of ranges that proved it was both tough and accurate. A couple of sand storms later, I was sold on how reliable and maintenance-free it is.”

Special Agent, USACIDC

## Thank you.

# Our Mission *your survival ...*

... I got the LaserMax sight, I didn't think  
... in .357 SiG could be improved as a  
... nsive tool. I was wrong. Everyone who  
... y have occasion to use it for defensive  
... purposes should definitely have a LaserMax  
... sight in it. It could save your life!"  
Steve Gas

"My team and I were traveling in Kabul  
when...an Afghan truck charged through the  
intersection, ramming my lead vehicle... The  
driver of the truck looked extremely angry  
and appeared to be preparing for another  
ram... I drew down on him with my SiG  
and had my laser right on his chest. His  
look immediately turned from rage to pure  
fear... His hands went above his head and he  
exited the vehicle... I was able to resolve this  
situation without incident."

S.A., Operation Enduring Freedom

... LaserMax twice  
... ths, once while  
... t a suspect's tire as  
... run me over, and

"In the real world, a delay in officer  
response can prove fatal. A LaserMax  
sight system provides the officer with that  
winning edge needed to get on target fast  
and deliver accurate aimed fire. Without  
questions, LaserMax sight systems can help  
you dominate and prevail when managing

... Chief of  
... "When the Sp  
... equipped Glock  
... I was there with my  
... super product and all yo

B.D., Coalition Forces  
- Hambali, born Riduan Isamuddin

"The LaserMax is the missing ele  
... completes my training and self-de  
... It couldn't fit my style better if I'd  
... order...it is, beyond any shadow of  
... best pistol laser on the market today."

John Lawson, LE Trainer of 20 years
