# A Message From the CEO

**M**y father, Alan, and I greet 2009 with a great deal of excitement, as it will prove to be a year of celebration and innovation for O.F. Mossberg & Sons. This year marks the 90<sup>th</sup> year since my great-grandfather, Oscar Mossberg, founded the company, and it is a milestone of which my dad and myself—and our families, both at home and our extended family of personnel—are proud. In an industry of ever-changing ownership and consolidation of brands, we remain the oldest family-owned firearms manufacturer in the United States today. And it is *in* the United States where we continue to manufacture

all of our Mossberg and Maverick brand firearms.

Since 1919, value, innovation and customer service have continued to be our top goals. This year is no different, with the introduction of some exciting new features and models. Most notable is a brand-new trigger system on all of the 4x4™ and ATR rifle models. Called the Lightning Bolt Action™ (or LBA™) trigger system, it is user-adjustable, creep-free and offers the shooter greater accuracy and control when taking that all-important shot. The LBA stays true to our roots and offers quality Mossberg workmanship without a hefty price tag.

The past nine decades have seen a lot of growth in our company and product lines, but one thing that is unchanged is our effort to bring you top-notch customer service. When our phones ring or letters and emails arrive, the aim of each person working behind the scenes is to be sure that every customer is a satisfied one. Whether Mossberg was your first gun or your newest gun, we appreciate your business and hope that we have always come through for you.

Enjoy exploring our *2009 Gun Annual*. In it you will find everything from useful articles written by the industry's top-gun aficionados to our current product line of firearms, extra barrels, chokes and accessories. Hopefully, you come away with some new guns to add to your wish list.

On behalf of my father and me,  
best wishes on a safe and successful  
season.

*A. Iver Mossberg, Jr.*

# High Calling

A remarkable six days in Alaska's Dall sheep country leaves little doubt as to hunting's ultimate pursuit.

By Lee J. Hoots

*Seeing sheep in the Alaska Range is easy; getting to them is not. A good rifle, like Mossberg's 4x4™, gives confidence at the moment of truth. Available in several variations including walnut and laminate stocks and matte-blue or stainless barrel and action, the 4x4 is a rugged rifle that stands up to the rigors of the far north.*

People are often taken aback when they hear what I do for a living. I suppose in this day and age—when single-parent families are the norm, farms and ranches are split among distant cousins and people are no longer held accountable for their actions—I shouldn't be surprised. It must seem crazy to people to think that someone can actually make a living from hunting. But I remind them that hunting is the essence of man's survival, and then I note that the editors of surfing magazines surf, right? Conversations generally get smoother after that, and invariably they lead to a very difficult question: "What do you like to hunt most?"

I don't always know a quick, easy answer. As a kid, ducks were my thing; in my late teens I loved to chase chukars, then I began bow-hunting deer. I'm also quite fond of pheasant hunting in the Dakotas and

going after sharptails in Montana. Dove hunting is a perennial favorite, too. In the past five or six years my answer has been deer, mulies or whitetails...maybe even elk. But if you asked me that question today, the answer would be Dall sheep. Hands down.

I wasn't feeling quite so fond of sheep hunting just a week or so ago, however. Halfway up the most rugged and steep ridge I've ever climbed in my 40 years, I was beginning to have doubts. It was the first day of a nine-day hunt. I knew it would be tough, but I didn't expect it to be so immediate.

Jaydee Kirby, my 30-something guide—and someone I would grow quite fond of during the coming days—had been on the mountain several days before the chartered Helio dropped me off in the bush. He and a client had taken a sheep in the snow on opening morning, which

allowed Jaydee to return to town for a few days before coming back to camp to hunt with me, the flatlander. Even though he carried most all of our spike camp on his back to the bottom of the basin, there was no way I could have kept his pace on that ridge—a ridge that I hoped would lead us to a big ram, and my salvation.

Alas, a fulfilling sheep hunt shouldn't be easy. And although a Dall hunt might not be the most expensive North American sheep hunt, it certainly can be among the most difficult; getting around in the Alaska Range, where I was sucking wind while ascending its drainages and ridges, is no stroll in the park.

Recent estimates suggest that perhaps more than 60,000 Dall sheep call Alaska's rugged landscape home. They occur in several distinct locations: the Alaska Range, Brooks Range, Chugach Mountains, Kenai Mountains, Talkeetna Mountains,

## High Calling

***Alaska's Dall sheep thrive throughout the state's mountains. It is estimated that there are as many as 60,000. Jaydee Kirby hopes to glass up a mature ram from his precarious post.***

Tanana Hills, White Mountains and the Wrangell Mountains.

These white sheep are spectacular in contrast to their surroundings and appear fragile, even delicate in contrast to the shin-busting mountainsides they thrive on. Their thick white coats glow against a dark shale background, and yet you'd be surprised how difficult they are to spot up in the rocks at times.

While ewes rarely weigh in excess of 150 pounds, a mature ram is comparable in body size to a big Rocky Mountain mule deer or Midwestern whitetail and may approach 250 pounds or more. Statuesque, a mature ram's horns are breathtaking. Unlike the Rocky Mountain or desert bighorn sheep that most U.S. hunters have seen, at least in captivity, with massive horns that curl tight to the ram's jaw and are often worn or broomed to stumps that curve up

to about even with the bridge of the ram's nose, a Dall's horns are slender.

Generally speaking, they are not as tightly curled and they flare out widely at the tips in a spectacular display of natural beauty; however, one or both horns can be broomed off short. The large, stubbed horns of an old white sheep make for an outstanding trophy, but flared tips are more common and elegant.

Alaska's Dall sheep hunting regulations are quite rigid. A hunter may only take a ram that exhibits at least one of the following signs of maturity: It must have at least eight obvious growth rings around one horn, at least one horn that has grown into a complete 360-degree circle when viewed from the side or broomed horns on both sides. Any of these indicators satisfy state laws.

By the time I'd made it to the top of the ridge and caught up with Jaydee,

he'd had a pretty thorough look around and wasn't too enthusiastic about our prospects for the evening. So not long after I'd made it to the top, it was time to turn around and head back to camp: MREs for sustenance, a small willow-branch fire to warm a chilled client and a two-man tent for cover.

The following morning, it was quickly apparent that I had pushed myself much too hard the first day. I struggled even more to climb to the mountain pass from which Jaydee wanted to glass. Finding very few sheep and no rams, we hauled off the mountain shortly after a cloudbank rolled in and began covering the tallest peaks. With the spike camp torn down and full loads on our backs, we walked back down the glacial-carved canyon a mile or more to the four-wheeler, then drove to "sheep camp," a plywood cabin with a wood-burning stove and propane grill. I needed the sleep and a good hot meal to recover. Jaydee knew it, too.

Two days down and no legal rams spotted. That night self-doubt was creeping in on me. It's only a 60-mile flight from Fairbanks to the landing strip and then a two-hour Rhino ride to get to Eric Umphenour's Hunt Alaska sheep camp, but it seems a world away and you'll feel small if doubt starts to take over.

I suppose that now's the time to admit that I was intimidated from the very beginning. "Get in shape," I was told by friends who had hunted sheep many times before.

"It was the most difficult hunt I've ever done," said two others who had hunted with Eric and Jaydee just one year earlier. I hoped to sleep away any insecurities that night, and in the morning I would take a few needless things out of my pack and go at it again.

"Today we can take it a little easier if you like," Jaydee said as we ate a warm breakfast the following day. "Maybe we can get you one of them 'easy sheep.'"

I never truly believed the "easy" part, but a day of glassing ridge tops

*Shot angles in sheep country are often steep. The author used a Mossberg 4x4™ rifle in .300 Winchester Magnum.*

from creek bottoms was fine with me. Eric has miles of country to look at, and much of it holds sheep. Most of it, however, is extremely steep, and if Jaydee and I spotted a good ram, I would have no choice but to climb. I was feeling better, though. Tougher. Focused.

We glassed drainage basins and ridgelines and pinnacles from the riverbed that entire day and saw very few sheep. Eric had some other hunters in camp during the two weeks before my hunt, and all of them shot rams, including one of those “easy” ones. Perhaps that was the reason we weren’t seeing much. An afternoon hike up into a wide basin was good for my confidence, and we did see some sheep up near the pass. Just none with horns. It became painfully clear that we were going to have to penetrate the Alaska Range a little deeper if we were going to find a ram.

The hiking became even more difficult during the next two days, but I began to enjoy the experience more. Jaydee and Eric, who had now joined us after seeing his successful client off to Fairbanks, had their pace and I was finding mine. Soon I was keeping within 15 or 20 minutes of them. Catching up to my guides was becoming increasingly easier.

That afternoon Eric spotted a very large ram at the head of the drainage we were ascending. The only trouble was that the sheep—three rams together—had apparently spotted us first and were at least 1,000 yards away and working their way up an impossibly steep slope.

“There’s no way we can catch up to them, and we just don’t take our clients up into dangerous situations anyway,” Eric said. “They’ll be around tomorrow. Let’s get up to the pass and find some other rams. We may

shoot one this afternoon yet.”

About 20 minutes later I crested the pass and sat beside Eric and Jaydee, their spotting scopes trained on the steep slope one ridge over. There, about a mile away, was an ewe and a very nice ram with heavy, full-curling horns. Down the canyon from these sheep about 1,000 yards or more was another group of five rams. In this mix was another sheep they believed was full curl, and a second ram was perhaps legal as well.

Unfortunately, even though the August sun sets late in the evening in central Alaska, there still would not have been time enough to make a concealed approach on either sheep. We would have to climb up and through the pass at least one more time the following morning.

“Tomorrow’s the day,” Jaydee said enthusiastically as we walked off the mountain. “We’ll come back in here

## High Calling

***One last hike, down and up through the distant pass, then another mile down the other side. Carrying your sheep trophy is your reward for all the hard work that goes into finding it.***

and shoot one of these rams.”

“Maybe we should get a little earlier start,” Eric suggested.

With at least three legal rams in the vicinity, and possibly four or five,

I had a good feeling about the coming day.

The following morning I asked Eric to carry my rifle and Jaydee to carry my camera. Weighing close to

seven pounds without a scope, my Mossberg® 4x4™ rifle was not what you would first think of for sheep hunting. But it certainly was up to the task. It's uniquely skeletonized synthetic stock and .300 Winchester Magnum chambering were perfect for the rugged terrain and the possibility of a long shot. With a Swarovski 2.5-10X rifle-scope atop it, the rifle was grouping right around an inch for three shots, so I was comfortable shooting out to 300 yards. I wasn't struggling due to its weight, but I knew shedding it and about four pounds of camera gear would take about 12 pounds off my back and help us all get up into the basin and over the pass more quickly.

When we arrived at the top, it took only minutes to find the rams across the valley up on the other slope. The situation was near perfect for a stalk. The group of five rams now numbered four but included a shooter, and the solo ram from the day before had picked up some friends.

The plan was to climb down our mountain and stay out of sight if possible, then climb up the opposite

## LIGHTNING STRIKES MOSSBERG IN 2009

Today's hunters and shooters are looking to maximize as much accuracy and performance out of their firearms as possible. Quality-made barrels, proper stock and barrel fit and refined trigger groups are key components to what it takes to produce a precision rifle. Mossberg products are known to be a great value in the marketplace, with many features found in its guns costing hundreds of dollars less than similar rifles on the market.

Mossberg has taken that philosophy to yet another level with the addition of its new Lightning Bolt Action™ (LBA) Trigger System.

The engineers at Mossberg were put to the task of designing a new trigger system to equal the excellent accuracy of the button-rifled barrels found on the 4x4 and ATR series of rifles. Rising to the challenge, the team developed the revolutionary LBA Trigger System—enhancing performance and accuracy while keeping safety in the forefront.

With its distinctive skeletonized trigger blade, the LBA offers the best in

form and function, giving the shooter the flexibility of adjusting the trigger pull without the need of taking his rifle to a gunsmith. A twist of a screwdriver enables the trigger to adjust from two to seven pounds. Mossberg's design of the LBA's sear engagement offers a truly crisp, creep-free trigger, optimizing accuracy. The trigger blade blocks the sear from releasing the striker unless the blade is fully depressed, even at the lightest adjustment setting.

Machined (not die-cast) from aircraft-grade aluminum, the LBA is hardcoat anodized to military specifications, which helps prevent corrosion and minimizing wear over time.

The new LBA Trigger System will be in more than 100 of Mossberg's extensive line of 4x4™ and 100 ATR® bolt-action rifles in 2009. Whether shooters are looking for a precision predator rifle or a long-range big-game rifle, the LBA Trigger System is taking Mossberg's line of firearms to the next level in accuracy and performance.

***Mossberg's new LBA Trigger System takes performance to the next level.***

ridge, which would put us between the two groups of sheep. The ram to the left was larger, so we would try for him first. But these sheep spotted us before we were across the streambed below them, and they quickly moved off. The other ram, on the other hand, had bedded down below a rock outcropping and was shielded from our approach the entire way.

It probably only took us a half-hour to get up above the bedded ram and his three cliffmates. Eric carefully slid his way to the top and looked down, then quietly turned toward us with eyes wide.

"They're only 70 yards below us," he said with confidence. "The biggest one is the one on the right, but we need to make sure."

As I slid up into shooting position and rested my Mossberg 4X4 rifle over my pack, keeping my profile as low as possible, Eric and Jaydee both set up spotting scopes and crawled to the edge of the outcropping to study the ram. Within a couple of minutes they had both agreed that the ram on the right was a full-curl sheep and gave me the go-ahead.

"Lee," whispered Eric. I turned away from the sheep. "Shoot the one on the right."

"Right now?" I asked, wanting to make certain they were confident in this ram's maturity.

"Yes, right now," Eric whispered, trying not to laugh.

I could see the humor in my query, too, but I was feeling the high sheep hunters get at the moment of truth. The fact that I was this close to such a magnificent trophy—one I had dreamt about hunting most of my adult life—was overwhelming. The hard work was about to pay off.

After chambering a cartridge as quietly as I could, I concentrated on making a perfect shot. I've had closer encounters with game I've bagged, and I've made shots long enough that I didn't want to tell anyone about them. None of them was as meaningful as the one I was about to take.

*Boom!* The shot was perfect, but before its report could bounce off the

***Pack light in sheep country. Everything you need will go on your back.***

canyon wall a half-mile away and return to my ears, the magnificent ram walked clear of a large boulder and I sent a second Barnes MRX bullet through its chest.

Later, some 25 noticeable pounds of sheep cape and horns riding on my back mattered little as I plodded toward sheep camp. Still carrying my rifle and camera and all the sheep meat, Eric and Jaydee kept their pace and I was finding mine. Only two miles to go, up one side and down the other, and the emotional journey that was my first sheep hunt was over.

My pace slow and my breathing heavy, I stopped frequently to take

in the unbelievable scenery. Yes, if a Dall's sweet backstraps and long, sweeping horns are not what drives a hunter to pursue it, then it most certainly is the remoteness of the white ram's home. For me, at that moment in the fading Alaska light, it was both.

I'm not sure any other hunting will measure up.

*Author's note: If you are interested in hunting Dall sheep, grizzly bears or moose, Hunt Alaska comes highly recommended. I have several friends who have hunted with the Umpheours, and all have been successful. Contact: 907/456-3885 or [www.huntalaskawithus.com](http://www.huntalaskawithus.com).*

*The author's big tom in late afternoon capped off a perfect two-bird day. The wily tom ducked the first shot but couldn't outrun a quick pump and load of #5s.*

# Birds of the Badlands

Spring gobbler hunting on the Great Plains has the excitement and ambiance of elk or mule deer hunting—at a fraction of the price. Tags are often available over the counter, and you'll cover the same geography where those famous deer and antelope roam. Best of all, public land, Indian reservations and hospitable ranchers create an abundance of easy access. On the other hand, don't think you'll just sit under a tree and work your best box or slate. Western turkeys behave radically differently than their eastern cousins, and you'll need to add "spot and stalk" to

Tagging a long-beard in the open plains and rainbow bluffs of Central South Dakota takes calling skill and plenty of legwork.

By Joe Byers

your list of hunting strategies. Merriam and Rio turkeys talk the same language as eastern birds, but a day on the plains requires miles of hiking and stalking and a plethora of setups.

The first step to a successful day is locating turkeys. On a recent hunt I headed a half-mile north of our rustic cabin camp, sure that I could coax the whereabouts of a roosting tom

**Turkey populations in Central South Dakota are excellent; ranches, public lands and Indian reservations provide a wealth of access.**

**Box calls seem to simulate Merriam's and Rio vocalizations the best. In addition, the higher volume of these calls helps cut through the wind noise that is nearly constant in the badlands.**

**Afternoon hunting may be unfamiliar to those eastern hunters who live in states where the season closes at noon. The best way to begin an afternoon hunt is to locate a flock of feeding birds.**

with my secret weapon—a coyote call. I had the caller to my lips when a real, live song dog cut loose in the distance. The vibrating yodel revealed a roost a quarter-mile to the north, and I hurried in that direction in the predawn darkness. The turkeys were across a small river, and I tried in vain to cross. Fifteen minutes later, still thwarted by deep water, I had little choice but to crank up a caller and make loud yelps. Amazingly, toms gobbled behind me from the area I had just left.

By the time I retraced my steps the turkeys were on the ground. A tom gobbled 100 yards ahead of me,

and I moved carefully to set up at the edge of a thicket. I couldn't imagine the bird approaching through such a briary tangle, but I had no choice. I tried yelping and switched to purrs on a slate, which caused immediate gobbles. The bird sounded hot but wouldn't approach. I switched to fighting purrs and really flipped his switch. It gobbled repeatedly, but again failed to show. Eventually, I heard the tom gobble well ahead and decided to circle ahead.

Climbing onto a ridge with a good vantage point I spotted several gobblers working toward a large flat. If I hurried, I could duck into a coulee

and cut them off. Half a mile farther I caught the toms in the open about 75 yards away. Should I sneak closer or let them come to me?

Patience seemed to be the best bet, as three long-beards fed directly toward me. My heart pounded as I waited for those red heads and swinging beards to breach the skyline. Suddenly, two Angus calves popped over the rise, exactly where the gobblers should have come. I waited a full 20 minutes, yet the range cattle had spoiled a perfect plan.

## Boomerang Birds

Food and hydration on the prairie

## Birds of the **Badlands**

*With no tree in sight, to prove if it was a "limb-hanger," the author tested his big gobbler as a "Barrel Hanger."*

are important, as a hunter can easily put in three to five miles of walking. At midday and early afternoon, Merriam's and Rios often feed on the open plains where approaching or calling them is extremely difficult. This is a great time to tweak your gear, check your eyelids for cracks (a.k.a.: take a nap), rehydrate and get ready for the afternoon hunt.

Ironically, as far as western turkeys range during the day, they habitually return to the same roost tree at night. Although hunters can gamble on a last-minute shot at the roost, the best way to take advantage of this boomerang behavior and tag an afternoon tom is to glass for incoming birds. Once a bird is spotted you can sneak into an intercept position and call the tom into range.

Around 4:00 o'clock, good friend Toby Shaw and I went back to the same area I'd started in that morning and looked for likely roost trees. "Let's make a call and see what happens," Shaw said softly as he took out a box caller and gave some yelps. Boom, a gobble sounded 100 yards away.

The tom was on the other side of

the river, 150 yards away and answered every call. We looked hastily for a setup but, finding none, decided to stay put. Toby called from behind a small bush while I sneaked 30 yards ahead, lying prone on a small rise. I saw movement across the river and motioned to my buddy to keep calling. The tom gobbled closer and closer, then grew quiet. He was apparently trying to approach silently, but half a gobble kept slipping out, giving away his location.

Brush rustled and sticks cracked like those calves had returned when, suddenly, a bright-red head and neck stuck from the brush and the tall tom moved steadily closer. It began to circle and walked behind a cedar tree, allowing me to raise my Mossberg 835°. When it emerged with its head and neck in the open, I fired, dropping the turkey in its tracks. Our hunt was barely 20 minutes old, and we already had a 15-pound prize.

Since the afternoon was young, Toby snapped some action photos as I hiked a few of the nearby badland formations. The colorful buttes and bluffs make this one of the premier hunting spots in the nation.

## METHODS FOR MERRIAM'S

Each successful big-league pitcher has special pitches to fool opponents. Often it's not the best fastball or curve that succeeds, but the ability to deliver quality pitches in the right combination. Hunting Merriam's and Rio Grandes is like that, too. Calling skills are important, yet you need more than one pitch. Locating, positioning, spotting and stalking will greatly increase your success. Wild-west turkeys are exciting to hunt, but simply running a slate won't get the job done.

**Locating:** Typically, you will want to locate roosted birds well before daylight so that you can get in the natural feeding path of hens and toms. Our gobblers were suckers for crow calls and answered them almost every time. Also consider coyote howls and elk squeals. These prompts make the gobbler reveal its location without enticing it closer, giving you time to slip in close for maximum calling affect.

**Spotting:** Binoculars may be as important as your hunting vest in the vast expanses of the West. Not only can you spot turkey a mile or more away, you can determine long-beards from jakes, avoiding arduous stalks that become a waste of time. Most glassing is done in open sunlight so that even compact models work well. Bright, lightweight and easy to handle are the traits you

want.

**Stalking:** Sneaking up on a gobbler is illegal in Pennsylvania and dangerous in crowded eastern forests. However, on mega-acre ranches with excellent visibility, putting the sneak on turkeys is an accepted practice throughout the West. Waterproof, comfortable boots are a must to handle frost, dew, even snow. Quiet, camouflaged clothing is important as you slip up and down ravines, and kneepads are a good precaution against prickly pear cactus. A rifle sling is a must for keeping your hands free to use binoculars, calls and perhaps a GPS.

**Calling:** Box calls are ideal for Merriam's and Rios. The pitch of the call seems to match that of hens, and the sound travels well in the mountains.

**Closing the Deal:** The Ulti-Mag® is king on the plains, where you need to be mobile, carry a light gun and have maximum range. My 930™ autoloader gave me that quick second shot when I needed it. Chase's Super Bantam™ was the perfect gun for a youngster. The 835® Tactical Turkey™ is an equally excellent choice with the ability to load cartridges from 2¾ to 3½ inches. Often, that extra 10 yards of range make a difference, and the light weight of these guns greatly aids mobility.

**The Mossberg 835® Tactical Turkey™ model delivers the sure-handed feel of a tactical shotgun in a highly effective configuration for turkey hunting.**

About an hour later, I was holding the turkey when Toby gave a hushed yell, “Gobbler!” Over my shoulder he’d spotted several hens and a trophy long-beard a quarter-mile away. The gobbler was especially alert, yet hadn’t seen us. We waited for the flock to feed out of sight, gathered our gear (and the turkey) and headed for my second tag. We made a wide circle trying to guess the route of the flock. At first they headed north, but then they came east toward a large bluff. If we could get to that vantage point we could intercept or call to them.

The going was steep and brushy, and we tried to move quickly and quietly. Finally, I broke out onto the ridge, inching my head above the skyline just as the tom gobbled. He was close, but where to hide? Resorting to our tag-team tactics, I lay in the prairie grass while Toby called, just like before. Instantly, the gobbler’s head appeared in a veil of tawny, sunlit grass. “There he is,” I whispered as I raised the shotgun. Trying not to move too quickly, I fired just as the tom ducked. Racing 10 steps to the horizon, the gobbler had already covered 40 yards but couldn’t outrun a second load of Federals No. 5s.

It was quite an afternoon. A quick check of the tom’s spurs showed he was probably a limb-hanger, yet there wasn’t a stout tree within a half-mile. “Will it hang on the gun barrel?” I asked. “Heck yes!” and a whole new measure of trophy turkeys was born. All in all, it was a spectacular hunt, with enough daylight left to get back to camp well before dark.

### Family Affairs

Back at camp we found some other hunter success stories. Taking

**Kim Cahalan and her son Chase outsmarted a 19-pound gobbler that sneaked in behind them. Chase used a Mossberg® Super Bantam™ to put down the big bird with a single shot.**

two toms in one afternoon was sweet for me, but it paled in comparison to the hunt enjoyed by Kim Cahalan and her son Chase. Just 10 years old, this was the lad’s first turkey hunt, and experienced hunter Ken Byers took mom and son under his wing. Byers soon had turkeys gobbling and approaching as Kim coached her youngster on turkey readiness. Suddenly, turkeys sounded behind their position and began exchanging gobbles like artillery fire. The excitement meter went off the charts.

“The birds behind us seemed closer, so I had Chase turn around and rest the Super Bantam™ 20 gauge on my knee, like a bipod,” said Kim, her pulse racing at the drama. “At

**Michael Mayor and his daughter, Marley, smile behind the beautiful bird taken by her dad.**

20 yards, three long-beards stepped from the weeds and began strutting and gobbling. My heart nearly stopped as I waited for my son to shoot. *Boom!* The shotgun popped and the turkey flopped, a 19-pound trophy tom.”

Michael Mayer and his daughter, Marley, also a 10-year-old, proved that badland adventure wasn’t just for guys. Dad bagged a gobbler, and while Marley didn’t get her first turkey, she got to spend some quality time one-on-one with her dad.

There’s no denying the many rewards that come from hunting with friends and family in the ruggedly beautiful Badlands of the Great Plains.

# The Next Generation

Passing on a legacy of shooting and hunting to youth is easier, and more essential, than ever.

By Clair Rees

*Chandra Patey shows her son Dillon, 9, how to hold an 802 Plinkster.*

**M**y most treasured childhood memories were of afternoons spent plinking with my father. When I was four years old, he decided it was time I learned to shoot. I was too small to use Dad's .22 autoloader by myself, so he'd sit on the ground while I rested the rifle across his shoulder.

Dad first had me shoot at clods of dirt—they were big, easy to hit and disintegrated into satisfying puffs of dust. Once dirt clods were no longer a challenge, I eventually graduated to picking off expended .22 rimfire cases lined up on the fence of an abandoned corral. "Never point a gun at anything you don't want to shoot," Dad sternly reminded me every time I held the rifle. That lesson was learned early, and I've never forgotten it.

A few years later I was allowed to roam my grandfather's ranch, carrying his single-shot .22. I shot my share of rabbits, magpies and chicken-stealing skunks before I was old enough to hunt larger game.

Dad died when I was nine years old, and I've always been grateful for those times we shared. I'm also grateful for the shooting legacy he left me, a legacy I've passed on to my children and grandchildren.

## The Right Fit

Introducing the next generation to shooting sports is easier than some might think. True, the world is a different place than it was only a few short decades ago, yet some things never change. Even with today's electronic distractions, most youths (both boys and many girls) still seem fascinated with hunting and the outdoors. That should give us hope for a future where firearms aren't shunned as evil and where people still enjoy spending time outdoors shooting and pursuing a variety of game.

There's also a wide variety of youth-size firearms available to young shooters, proportioned to fit small frames and make shooting comfortable and fun. When you teach youngsters to shoot, it's imperative to start them out with a firearm they can easily manage. If a gun is too heavy or

*Dex poses with his trophy, an interactive target that spins when hit, which is far more fun than punching holes in paper.*

has a stock that's too long, a small-statured shooter simply won't be able to shoot it well and can quickly become discouraged. A youth must be able to hold the rifle in the proper position, then cheek the stock so he or she can align the sights. Missing your mark because an oversize gun makes accurate aim impossible is the kind of experience that can turn away a beginning shooter for good.

Fortunately, Mossberg has long made guns designed for young shooters. Perhaps that's because it began with its own strong family tradition. In 1919, Oscar Mossberg and his sons Harold and Iver founded the company. Their first product was a .22 deringer with four barrels and a rotating firing pin. Three years later, production began on a new .22 rimfire pump. By 1929 the company began making a lever-operated single-shot with a falling-block Peabody action.

Two years later, Mossberg intro-

*The 802 Plinkster with thumbhole stock and fold-down fore-end makes it easy for young shooters to take steady aim.*

duced the Model B—a single-shot .22 bolt action specially sized for youths. Along with it came a larger Model C version for adults, allowing both parent and child to enjoy the same gun. A variety of single-shot .22s followed, and in 1949 Mossberg announced the Model 142, a box magazine-fed bolt-action repeater along with a .22 autoloader called the Model 152. The Model 152K was a rakish-looking carbine with a military-style fold-down fore-end. I remember badly wanting one, but being a cash-poor teenager prevented the purchase. These rifles were highly popular in the 1950s.

Today, Mossberg International offers the largest variety of .22 youth guns available anywhere. They include the new 801 Half-Pint™—a bolt-action single-shot fully proportioned to suit young shooters. It sports a 16-inch barrel, a 12-inch length of pull with a shortened pistol grip and an EZ-Reach forearm. The agreeable

## The Next Generation

**Dex gets instruction from his mom on proper shooting stance before mounting the .22-caliber Half-Pint™.**

**Six-year-old Dex takes aim with the Half-Pint™ .22, which is perfectly sized for his tiny frame.**

four-pound heft means any youngster can hold the rifle in a safe shooting position.

An easy-to-operate crossbolt safety is incorporated into the forward part of the trigger guard, and the open sights are adjustable for both windage and elevation. The Half-Pint comes equipped with a removable magazine plug that restricts the shooter to manually loading only a single round. Once the youngster has mastered basic gun handling, a parent can order a 10-round magazine, converting the rifle into a repeater.

Also available is the 802 Bantam Plinkster™, a bolt-action repeater with a 10-shot box magazine. It has an 18-inch barrel and shortened, black synthetic stock. (A pink-stocked version is also available.) Weight is just a hair over four pounds, and some models are offered with a factory-mounted four-power scope.

For parents who have decided that their young shooter is ready for an autoloader, the 702 Bantam Plinkster™ will fill the bill. The Bantam version of Mossberg's popular clip-

fed self-loader has an 18-inch barrel and weighs only 4.1 pounds. The synthetic stock has a 12¼-inch length of pull and is offered in your choice of black or pink. The black version is also available with a four-power scope installed.

Today youth-size guns are available in a wide range of calibers, not just the classic .22 rimfire. Mossberg's 100ATR® Super Bantam is a short-action bolt rifle with a shortened black synthetic stock and a 20-inch barrel. The stock features a shortened length of pull that can be incrementally adjusted as the shooter grows. The rifle is chambered for the .243 Winchester—a soft-kicking round that's adequate for hunting deer and pronghorn—as well as the venerable .308. A soft, recoil-reducing pad caps the butt. The youth-size rifle weighs just 6½ pounds. This accurate, well-made hunting rifle is priced right for beginning shooters.

Bird hunters haven't been forgotten either. The 505 Youth Field is an easy-to-carry 5¼-pound pump-action shotgun featuring a shortened

hardwood stock and a 20-inch barrel. It's available in either 20 gauge or .410 bore. For a little more versatility, Mossberg's 500° Super Bantam™ has a 12-inch length of pull and an adjustable-length, synthetic stock. Built on the best-selling 500° pump action, this versatile 20-gauge youth gun is offered in several variations ideal for upland game, waterfowl and turkey hunting. The Super Bantam™ Slugster® is outfitted with a fully rifled bore for the deer woods, while Field/Deer Combo versions allow shooters to switch between rifled-slug and smoothbore shotgun barrels.

### In the Field

I recently accompanied a friend, Chandra Patey as she gave her sons, six-year-old Dex and nine-year-old Dillon, a shooting lesson. Dillon had shot .22s before, but this would be Dex's first experience firing a gun. Chandra's daughters—Alex, 13, and Ashlyn, 11—stayed at home. They were already experienced shooters, thanks to their mother's training.

Chandra's parents taught her to

***Big brother Dillon sets up some samples of aging fruit on the target stand. Not only are such targets biodegradable, they provide a dramatic explosion that lets the shooter instantly know they hit their mark.***

shoot and hunt at an early age. She has hunted a wide variety of game, is equally accomplished with rifle and shotgun and is now passing along this legacy to her children.

Dex's inaugural shooting session would be with Mossberg International's 801 Half-Pint .22. It proved to be an ideal choice with a stock sized just right for a six-year-old frame, and he had no trouble holding the four-pound rifle to his shoulder.

Dillon also did some shooting with the Half-Pint .22, but the 802 Plinkster™ Thumbhole Tipdown was more to his taste. It had a black synthetic thumbhole stock with a hinged forend that can be lowered to form a vertical foregrip. The full-size stock had a 14¼-inch length of pull, and the rifle weighed just a tad over 4½ pounds. The 21-inch barrel featured a contrasting brushed-chrome finish.

I knew that youngsters can quickly find shooting at paper bullseyes boring, so I had brought along a selection of interactive targets. They included a Duraseal Spinner Target from Champion Traps and Targets,

featuring a bright-orange prairie dog silhouette that spins when hit, then automatically returns to its upright position. I also made arrangements with my local supermarket to collect some of the aging produce they throw out each day. Overripe oranges, grapefruit and other citrus fruits satisfyingly explode when struck by a high-speed .22. Another advantage is that there's no need clean up the remainders afterward—wild critters are happy for the feast you leave behind.

While this wasn't the first time Dillon had fired a .22, his last shooting session had been long enough ago that his technique was a bit rusty. Correcting his stance and giving him a refresher course in sight alignment, Chandra soon had him spinning the orange prairie dog and shattering fruit. She took more time with Dex, who was getting his first lesson. Chandra patiently showed him how to hold the rifle and line up the sights. By moving him closer to the target, she improved his odds of connecting.

After a half-dozen attempts, he finally hit the prairie dog silhouette,

bringing a big cheer from his audience. Getting the knack, he then began blowing fruit fragments skyward.

Dex observed safety precautions including wearing protective ear and eyewear—a must for any-age shooter. I know many adults who don't bother wearing hearing protection when firing .22 rimfires. This is guaranteed to cause hearing loss later on. Permanent hearing damage begins at a mere 85 decibels (dB) of sound, while a .22 rimfire rifle easily generates 126 dB.

The time Chandra spends teaching her children to shoot and hunt will build incredible memories. It's an investment in her family but also in a sport she loves, and it will help ensure that these wonderful traditions remain alive many years from now. Like the legacy I inherited from my father, it is a precious one. We have the tools to do it, but if interest in shooting and hunting isn't actively encouraged—and encouraged now—succeeding generations face a dark future where these privileges no longer exist.

# The TASER Ride

The new TASER Mossberg X12™ shotgun and TASER XREP™ round double the effective range of this fantastic less than lethal compliance tool.

By J. Guthrie

*The TASER XREP and Mossberg X12 have double the range of a handheld TASER and give officers more options.*

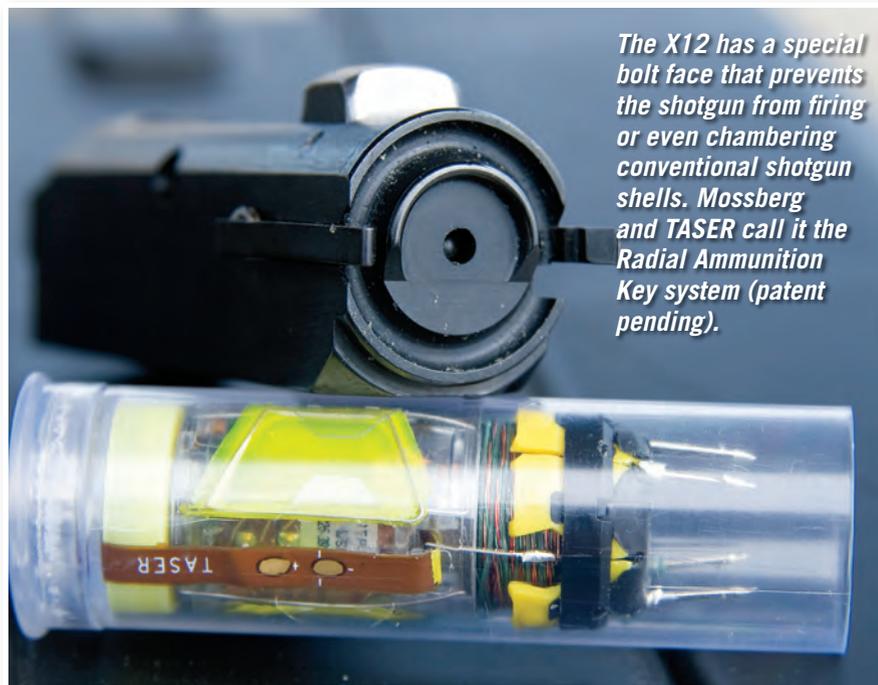

Anyone who has taken the “TASER ride” and heard the staccato clatter of arcing electricity behind them on their way to the ground can tell you that TASER adds a new dimension to the word “compliance.”

In business since 1993, the TASER company has given peace officers, soldiers and civilians a very potent tool to instantly stop whomever from doing whatever, no matter how determined, almost instantaneously. More than 14,000 agencies issue TASERs worldwide, and there’s a wide variety of options and accessories as a result of product that has improved over the years.

The catch has always been the length of wire that delivers the charge to the probes. It is pretty obvious that a 15- or 25-foot cartridge required the user to come within 15 or 25 feet of the target. Distance can be a great ally, allowing more reaction time and options to bring a critical situation to a successful close.

For several years, TASER has sought to extend the range, and that day has arrived with the eXtended Range Electronic Projectile (XREP). Fired from a 12-gauge shotshell, the device fits on a quarter but delivers the same fight-stopping, less-than-lethal dose of electricity as the TASER X26 device. Miniaturization of key components and clever engineering allow the XREP to tackle the less savory members of society out to 65 feet, nearly double the range of hand-held units.

One big problem was getting the prongs far enough apart to cover enough sensory nerves to cause Neuro-Muscular Incapacitation (NMI), the instant seizing of a target’s skeletal muscles. Engineers broke the XREP into two pieces to get the necessary distance between electrodes. The nose cap, tipped with four barbed electrodes, strikes the target and sticks. Fracture pins behind the nose cap break upon impact and the body falls away, unspooling a 14-inch length of wire behind it. The nose cap and chassis remain connected by these wires, two halves of a circuit waiting for a connection. As

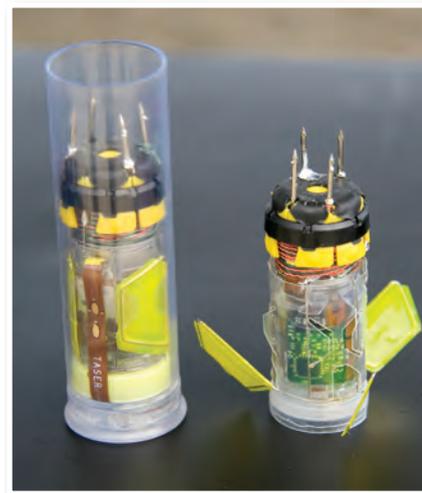

*The X12 has a special bolt face that prevents the shotgun from firing or even chambering conventional shotgun shells. Mossberg and TASER call it the Radial Ammunition Key system (patent pending).*

*The XREP can be fed through the X12’s magazine, allowing an officer to engage multiple targets or deliver a follow-up round, if necessary.*

the chassis falls, a plastic sleeve slips off and six Cholla electrodes—named in honor of the long, nasty spines on that most vicious Southwest cactus—deploy. When the Cholla electrodes make contact with something, the circuit is completed and the juice starts to flow.

Just in case the Cholla electrodes do not penetrate enough to deliver the shock, the circuit can be completed by touching the tether between nose cap and chassis, a likely reaction given the sharp pain of the

*A clear plastic hull holds the XREP chassis. A tab attached to the hull activates the chassis as it starts its way down the barrel.*

nose cap attaching. NMI causes the hand to clinch, sealing the deal and preventing the subject from tearing the device away.

The two different paths allow a significant distance between probes, giving the electric pulses plenty of room to cause NMI. In a worst-case scenario, if all the other circuit-completing options fail, the shock is delivered across the nose-cap electrodes. The dose is not enough to cause NMI, but it is certainly enough to be uncomfortable and distracting.

## The **TASER** Ride

*The X12 is easy to use and has standard fire controls. Recoil and report are practically nil.*

*Practice rounds are easily identifiable due to their light-blue coloration.*

This device is smart. Twenty times a second an onboard microprocessor determines which path is the longest and most effective way to deliver the shock. The self-contained system is powered by a battery that, while

quite small, is still able to deliver a 20-second ride. This allows an officer to close on a subject or retreat out of harm's way. The XREP is activated the second it leaves the shotshell by virtue of a small pull tab attached inside

the hull; there is no on/off switch.

Ray Minor, TASER's training manager, told me that the preferred minimum deployment distance is 15 feet, though it will work inches out of the barrel. The round shouldn't break the skin at that range since the four nose-cap electrodes are staples and spread outward instead of penetrating deeper at higher velocities. The projectile leaves the muzzle at 260 fps and develops 30 to 50 ft-lbs of striking energy. The impact is quite a bit less than other less-than-lethal projectiles such as baton rounds or bean bags, but it's enough to guarantee that the nose-cap probes penetrate any clothing.

Since the XREP is intended to be deployed from a shotgun, a conventionally positioned primer system ignites a small propellant charge. Three spring-loaded fins deploy immediately after the unit leaves the barrel and impart a spin on the round for improved accuracy. Minor said groups averaged in the two- to

three-inch range. During trajectory testing, the round dropped 16 inches at its maximum recommended range of 65 feet.

Why go to the trouble of making an XREP-only shotgun? Some departments have found out the hard way that it is easy, almost inevitable, that lethal rounds will eventually be confused with not-so-lethal rounds and the department ends up in court. Mossberg and TASER worked together to turn the tried-and-true Mossberg 500® into a platform for launching the XREP.

The X12 Dedicated Less Lethal Shotgun starts with a 500 receiver. A six-position stock allows a customized length of pull for smaller-statured officers or officers wearing heavy body armor. The stock will collapse down to 9¼ inches and is 13¼ inches long fully extended. Ghost-Ring® rear sights, red-ramped front blade and standard fire controls minimize the need for special training since all the controls are in the same place and do the same thing. A fore-end with Picatinny rails makes it a cinch to mount accessory lights, lasers or an X26 for close-range work.

Here the similarities end but they are not that easy to see. The X12 has a circular, raised ridge on its bolt face that prevents a buckshot-toting cartridge from having its primer pounded by the firing pin. X12/XREP rounds have a matching profile on the cartridge base that allows the firing pin to reach the primer. The Radial Ammunition Key™ system is an easy way to prevent lethal cross-contamination of ammunition. Bright-yellow highlights on the stock and fore-end also help distinguish the X12 from its more lethal counterparts.

Initial testing revealed that the difference in weight between the XREP chassis and a standard slug caused less-than-ideal accuracy. A fast-twist, 1:18-rifled barrel offers an improvement over standard 1:36 twist rates. The final twist rate could change as the projectile is modified before final production.

***Impact velocities are far below other less-than-lethal rounds but enough to stick the nose-cap probes through clothing. After striking a target, the nose cap sticks and the chassis falls away. Contact with the Cholla electrodes or the tether will complete the circuit.***

Shooting the X12/XREP combination was pretty simple, even fun. The XREP rounds load and chamber just like regular shotgun shells. Recoil is nil, as is the report of the round. During a demonstration at the Blackwater USA training facility, all of the participants were able to get center-mass strikes out to the stated maximum effective range and beyond. Most of the shooters were veterans of previous TASER training, and, taking note of the 20-second cycle time, there were no volunteers to take an XREP ride.

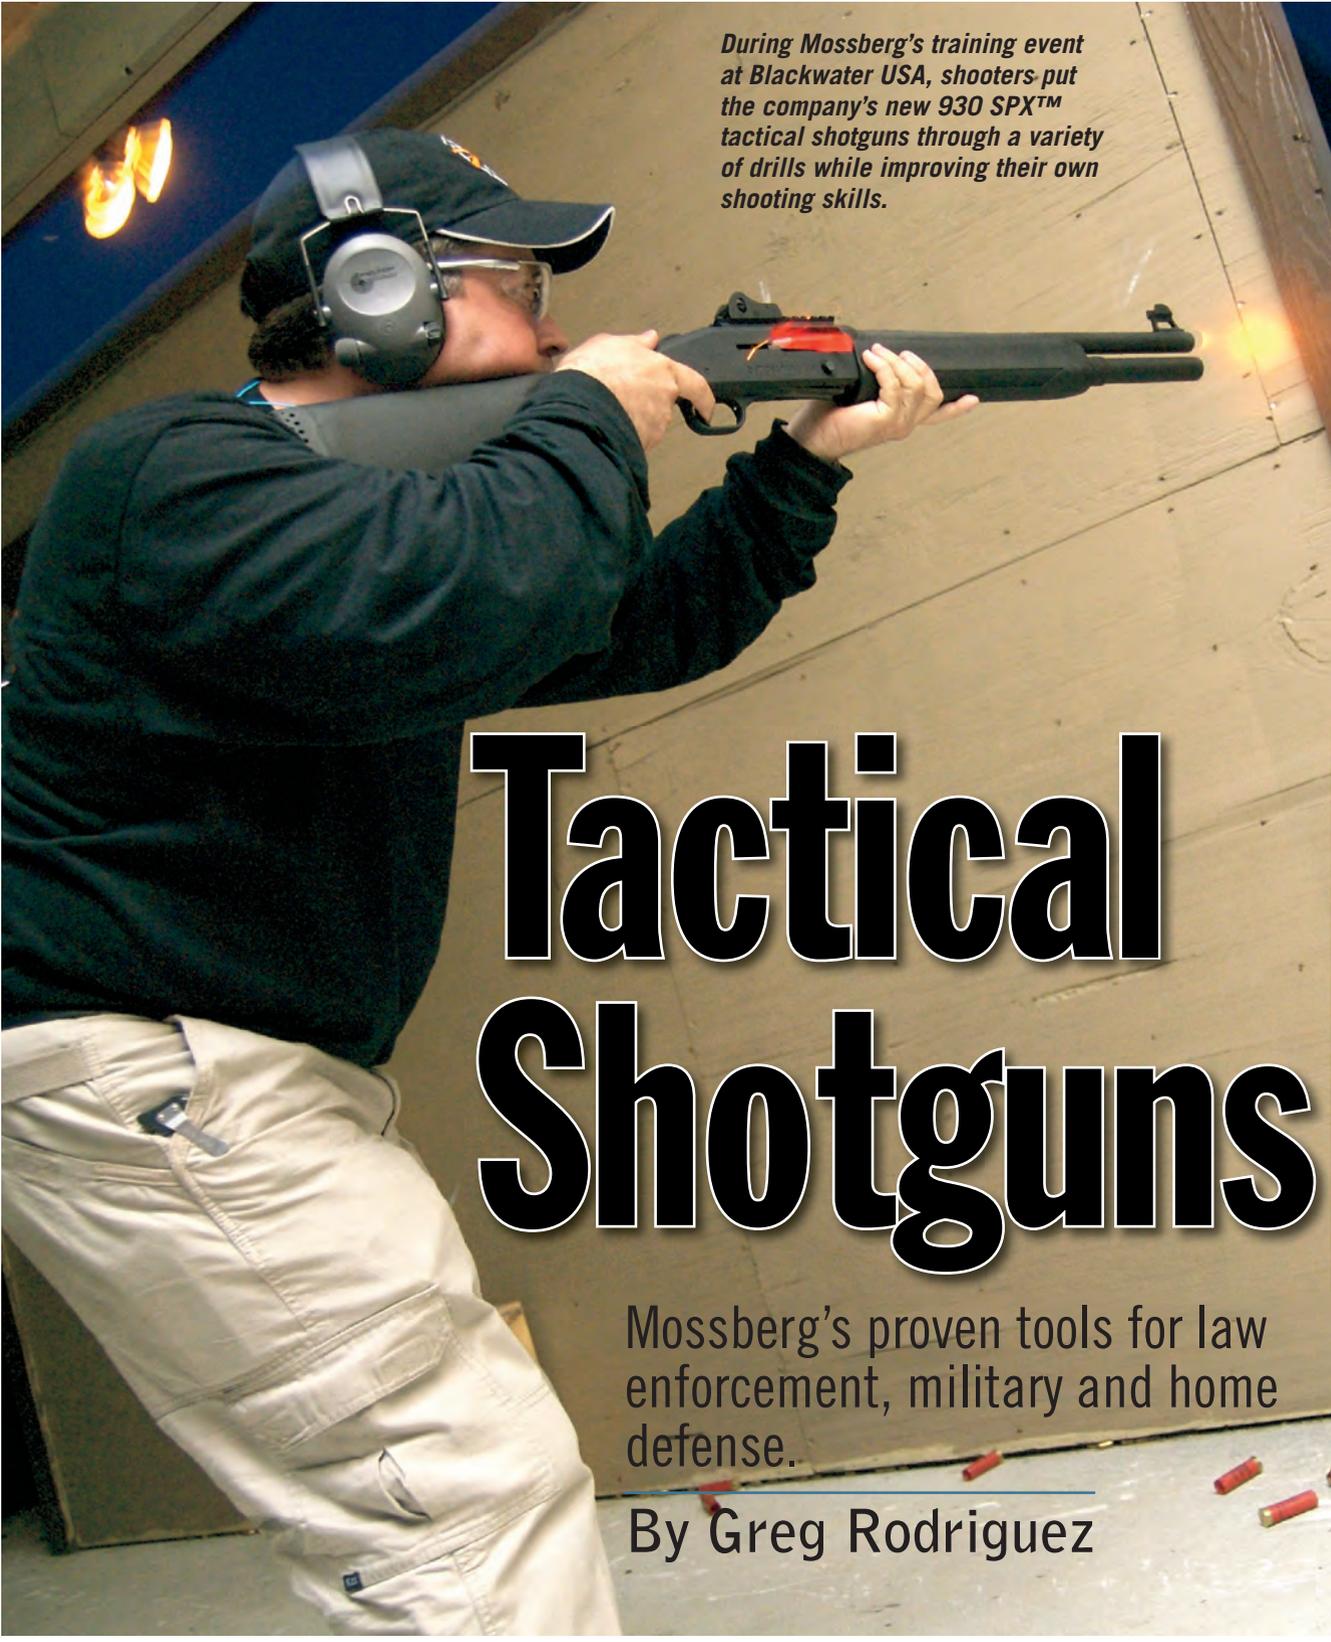

A training round has been developed to allow cost-effective, live-fire practice. Both live and dummy XREP rounds have a clear hull, and the practice-round body is a distinctive light blue to avoid confusion.

Off-the-shelf watch batteries power the XREP and have a shelf life of around five years. Since battery-powered devices often fail at the most inopportune time, TASER is working on a way to check the status of an XREP round in the field and will

incorporate that feature into future versions. Future rounds will also be sealed against the elements. The XREP, in its current form, will probably cost \$100 to \$150 per round, and training rounds will be significantly cheaper. Pricing for the X12 has yet to be determined.

So what do law enforcement agencies and departments stand to gain from the X12 and the XREP? Handheld TASERs like the M26 and X26 have, according to numerous studies by TASER and law enforcement agencies, reduced officer and suspect injuries and proven to be a reliable and useful compliance tool. The X12/XREP package only extends those capabilities, both in volume and range—multiple strikes on multiple targets are just a shuck away. Both shotgun and cartridge are built around field-proven systems that do not complicate training schedules.

The XREP and X12 are currently being tested in the field by selected agencies. A final version should be available by early 2009.

*During Mossberg's training event at Blackwater USA, shooters put the company's new 930 SPX™ tactical shotguns through a variety of drills while improving their own shooting skills.*

# Tactical Shotguns

Mossberg's proven tools for law enforcement, military and home defense.

By Greg Rodriguez

I rolled up to the stop sign without a care in the world. Fortunately, I kept my head up and eyes scanning. I noticed him, but I didn't give the guy riding my bumper a second thought until some dude in an an-

cient hunk of American iron rolled to a stop right in front of me to block me in. Before anyone could exit either vehicle, I lined up my left headlight on the old Caddy's front tire and punched it, leaving a trail of broken

glass, twisted metal and empty-handed punks in my wake.

Fortunately, the attempted robbery was just a training scenario. No one was injured, although several vehicles were much the worse for wear

at the conclusion of the first annual Mossberg class at the world-famous Blackwater training facility in North Carolina.

Although we got to do fun stuff like crashing cars and spinning around the test track in formation with our fellow students, the real purpose of our class was to test the newer additions to Mossberg's line of fighting shotguns, and we left behind a mountain of paper and steel targets as proof. Many may not realize that Mossberg is the largest provider of shotguns to the U.S. military, but if the number of new tactical models Mossberg recently rolled out is any indication, that is about to change.

## Just-In-Case

Mossberg's pistol-gripped Cruiser® has been a consistent seller since its introduction. It remained largely unchanged until the Katrina disaster, which spurred sales of the handy and affordable shotguns to citizens clamoring for some protection in the midst of the epic hurricane's lawless aftermath. Mossberg's new J.I.C.™ (Just-In-Case) models are aimed squarely at a market that, by and large, consists of first-time gun owners in search of a handy, reliable tool with which they can defend their home and family in such situations.

Because it is meant to be stored for long periods of time by people who are probably not used to maintaining weapons, the J.I.C. is packaged in a waterproof storage container. In keeping with its intended role, it comes with a small survival kit. The kit contains some handy stuff, and the storage tube is large enough to augment it with other gear. And because the tube is waterproof, you can rest assured that the whole kit will stay safe and sound until you need it.

The J.I.C. has flown off store shelves since its introduction last year. Because of its popularity, Mossberg added two new variants to the Just-in-Case line. The J.I.C. Mariner® model features Mossberg's corrosion-resistant Marinecote finish and comes with a handy multi-tool in place of the survival kit. It should be perfect for those living in

*The 930 SPX™ and J.I.C.™ (Just-in-Case) Sandstorms are two of Mossberg's newest tactical shotgun offerings.*

*The SPX has a Picatinny-spec rail. An LPA rear sight is standard, but it is easily removable by those shooters who would prefer to mount a red-dot sight.*

coastal regions or who like to keep a handy defensive tool aboard their boat. The J.I.C. Sandstorm® variant, which I recently added to my personal collection, features an attractive and corrosion-resistant desert camo finish and matching storage tube.

Pistol-gripped shotguns are specialized tools, but they do have their place. As I write this, my Sandstorm sits next to my desk. Although it lacks the buttstock that would make it a well-rounded urban gun, its stubby stature makes it easy to manipulate indoors, and it packs a devastating

punch. The six-round capacity also gives me more than enough firepower to deal with any home-defense situation.

When cats a bump-in-the-night noise makes the hair on the back of my neck stand on end, I can easily conceal my J.I.C. at my side as I sneak out front to investigate.

The risk of a horrific natural disaster and the resultant lawless aftermath may not be a concern in your area. But with prices starting near \$400, Mossberg's Just-in-Case line is affordable, powerful and concealable enough that it's hard to justify not

## Tactical Shotguns

*The front sight of the 930 SPX™ is protected by robust steel ears. Its brilliant fiber optic insert is easy to acquire in any light.*

*The author believes that Mossberg's placement of the safety on top of the receiver is the best-positioned of any in the tactical shotgun class.*

keeping one around, just in case.

### The Defensive Semiauto

I got to test the first prototypes of the Mossberg Model 930™ three-inch-chambered semiauto gas gun in Argentina two years ago. I must admit that, at the time, I was shocked that Mossberg would go out on a limb by testing a prototype semiauto in Argentina. After all, I'd seen the endless swarms of South American doves reduce most popular semiautos to smoking hunks of non-functioning steel at one time or another in my many trips there. Still, the Mossberg folks seemed confident, so I packed

my bags and a pair of prototype 930 models and headed south.

My hunting partner and I ran 3,875 rounds through a pair of 930 semis over the course of that hunt. We cleaned and lubricated them each night, but we didn't baby them. And that dirty South American ammo couldn't have worked in the guns' favor either. Nevertheless, the 930 ran perfectly, without a single failure to feed, fire or extract between them. I was sold on the rugged, reliable new Mossberg. So when I was invited to participate in the unveiling of a new tactical version of the 930—the 930 SPX—at Blackwater, I leapt at the

chance.

Like all 930 shotguns, the SPX is built on Mossberg's trim 930 receiver with a top-of-the-receiver safety. It employs the reliable 930 gas-operated action, and its self-regulating system employs dual vents to shed excess gases, which reduces recoil and eliminates stress on the operating components. Because it is self-regulating, the 930 can also digest everything from 2 3/4-inch target loads to heavy defensive loads without a hitch.

Like the field model I tested in Argentina, the SPX has a comfortable black synthetic stock with a 14-inch

## DEFENSIVE FAVORITES

Shotguns have long been the most popular choice for home defense. Proponents cite the intimidating appearance of that gaping maw and the frightening sound the action makes when you pump home a fat round as reasons they love shotguns. And they're darn good reasons. But I think shotguns are also popular because they're affordable, easy to use and as reliable a gun design as you can get. They are also devastatingly effective.

**For New Shooters:** A gun like the 930 SPX is an awesome home-defense weapon, but less experienced users looking for an affordable, easy-to-use shotgun might consider a Mossberg pump gun. For a modest investment you get a powerful, easy-to-use gun that will go bang every time you pull the trigger.

**For Special Needs:** Mossberg's 500® series guns give users additional features for a slightly higher price. If you're looking for a pistol-grip entry gun or a corrosion-resistant blaster for your boat, odds are the 500 series has a gun for you. The 590 A1™, for example, is the shotgun of choice of the U.S. military. Its nine-shot capacity, Parkerized finish and ghost-ring sights also make it an excellent selection for home defense.

**For Smaller Frames:** Small-stature shooters can opt for 20-gauge or .410 bore Cruiser models with a pistol grip Mossberg's HS410 Home Security shotgun delivers six rounds of .410 bore firepower and a pistol-grip fore-end. The .410 is plenty lethal at home-defense distances, too.

***The attractive Sandstorm variant of Mossberg's J.I.C.™ (Just-in-Case) tactical shotgun has a rugged corrosion-resistant finish.***

***The silver protrusion inside the triggerguard provides tactile and visual verification that the 930 SPX™ is cocked.***

length of pull and a black ventilated recoil pad of reasonably squishy material. Overall, the ergonomics were excellent.

The 18-inch SPX differs from other 930 variants in that it has a seven-round magazine and LPA sights. The magazine is a rugged, extended tube that runs all the way to the muzzle. The LPA rear sight has a nice, wide aperture and is adjustable for windage and elevation. The red, fiber optic front sight is easy to pick up in almost any light. Both sights have rugged ears to protect them. The rear is mounted to a Picatinny-spec rail that gives a great deal of flexibility for mounting optical sights.

Mossberg's newest 930 is indeed a slick package. It looks every bit the serious tactical shotgun and has all the necessary bits and pieces, too. It also comes to the shoulder easily and feels darn good in the hands. I was eager to put it through Blackwater's abbreviated shotgun course to see if it ran as good as the other 930 models I've tested.

Our class began with the basics, with a strong emphasis early in the class on how to best mount and shoot our new blunderbusses to minimize muzzle rise. This was a big deal for

the pure hunters in class, whose bladed positions resulted in slow shot-to-shot recovery times. They came around to the more squared-up style quickly, however, when shown the difference in muzzle rise between the two.

Next, we fired slugs offhand at 100 yards to check our zeros. This also proved the effectiveness of our new form and gave us all a wake-up call in regard to the range and capabilities of the shotgun. After a few adjustments, we worked our way forward in 25-yard increments, checking our zeros the whole way. At 25 yards we switched to buckshot and worked our way forward to the seven-yard line.

Once we got used to manipulating our shotguns and our new, squared-up shooting style, the rest of the class was devoted to engaging multiple targets quickly, which we incorporated into room-clearing exercises and fighting our way out of a mock vehicle ambush. We also learned the "select slug" drill, which came in handy in the final top-gun competition.

The final exercise began with the shooter seated in a vehicle. At the buzzer, he had to dismount, perform the select slug drill, engage a hostage-taker at 50 yards without hitting the

hostage, then engage racks of plates from three positions behind three different barricades. It was a fun, fast-paced exercise that put our newly developed skills and our shotguns to the test.

The Mossberg 930 SPX passed this grueling Blackwater workout with flying colors. It ran like a top with everything from slugs to light field loads, even though I didn't clean it once during the two-day course. It also shot great, thanks to a good trigger and excellent sights. The LPA rear sight and fiber optic front sight were easy to acquire and hit with in any light.

Thanks to the efforts of Blackwater's skilled trainers, I came away from that class with a great appreciation for the capabilities of the fighting shotgun. I've always known that the 12 gauge was a devastating close-range weapon, but my Blackwater experience taught me that an accurate shotgun such as Mossberg's 930 SPX can also be wielded with great precision out to 100 yards.

The fighting shotgun is a very capable defensive tool. Mossberg's latest offerings in the Just-In-Case line and the new 930 SPX are among the best.

New Update

Two new imports that deliver performance  
far beyond their price

By Nick Sisley

# and Guns

## New Upland Guns

*The curve and checkering on the pistol grip provide a good feel, something the author finds missing on many synthetic stocks.*

*The SA-20™ semiauto's fore-end has these small slots on both sides to vent gases used to operate the action.*

The stalwarts of the Mossberg shotgun line have been around for years, most of them for decades. The 500 pump gun, available in scores of different configurations, has been responsible for countless sales, and the 835 pump wrote a new saga for waterfowling and turkey work with the 3½-inch Magnum 12 gauge. In semi-autos the 935 and 930, both

in 12-gauge, are well-proven platforms. Mossberg's sister company, Mossberg International, has recently introduced two totally new shotguns. One is a nimble-handling and inexpensive semi-auto import, the other a nicely styled side-by-side. The double gun is a totally new venture for the company, though in 2004 they introduced an over/under line with

its Silver and Onyx Reserve models. Both new guns are made in Turkey, a place many U.S.-based manufacturers and importers are turning to more frequently, and fall under the banner of Mossberg International.

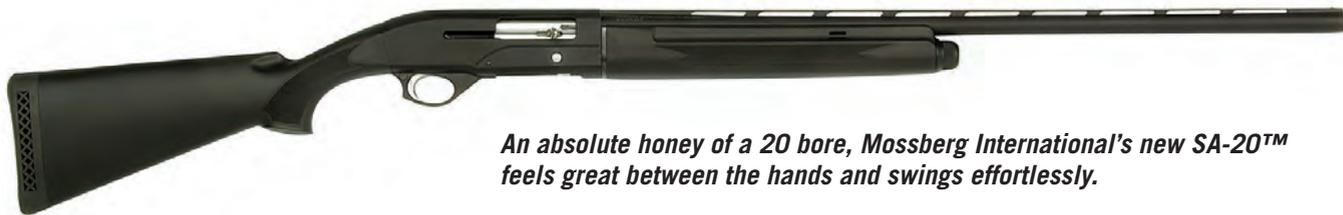

### New SA-20™

The semiauto SA-20 weighs six pounds, half-ounce on my digital postal scale, so it's very light. Sometimes light shotguns of this type are tough to swing smoothly, particularly on crossing targets; however, I had no such problem. Just the opposite, this 20 was silky smooth. If I got behind quick quartering-away birds, this light little escopeta was quick to catch up and overtake them. When I stepped back to shoot some longer 40-yard shots, I simply tightened up with one of the five screw-in chokes supplied and the 20 semiauto would start smoking birds again. Usually, it's on the longer shots that a light shotgun loses its appeal, but again, I did not find this to be the case with the SA-20.

My test gun was not blessed with a \$3,000 piece of walnut, but rather it had a highly practical black composite stock with smooth, appealing lines. Just in front of the comb there is some nice fluting, and the shape of the pistol grip appeals to me as well. In length of pull I measured 14⅝ to the midpoint of the recoil pad, 14¼ to the top of the pad and 14½ to the toe of the pad.

Incidentally, the recoil pad is rubber, it's vented and the edges are rounded slightly, especially at the top (to help prevent hanging up on clothing while mounting). The pad is also horizontally ribbed, so it stays put once you have it in place on the shoulder. Recoil-pad width is just under one inch.

There's also a good feel to the checkering on both sides of the pistol grip and fore-end. With some black composite stocks there's very little

*An absolute honey of a 20 bore, Mossberg International's new SA-20™ feels great between the hands and swings effortlessly.*

feel to the checkering. I also really like the gun's fore-end shape. In 20 gauge it's quite thin (1.6 inches) and relatively long (12 inches). I think this longer, thinner fore-end adds nicely to the semiauto's looks. Note also that there are two ports on each side of the fore-end—these help vent gases that aid in ejecting the empty shell and slamming in a new one from the magazine.

There's a contour line on the right side of the receiver, but otherwise the receiver is black and without any gingerbread. The finish is matte black rather than polished blue, making it all the more difficult for a bird's wary eyes to catch any reflections. The bolt is chromed, as is the opening lever, release button on the right side, carrier underneath and trigger. That trigger broke at 5½ pounds on my Lyman digital trigger-pull gauge.

Operation is as simple as pulling the bolt open. In other words, there's no secondary lever to trip to make the bolt stay back. A number of relatively new semiauto designs require tripping a secondary lever first.

The barrel is also black matte finished—26 inches on my test gun, but a 28-inch version is available, too. The bore measures .625. Twenty-gauge barrels tend to measure .615, so this barrel is overbored, which is a good thing. There's a ventilated rib atop the barrel measuring .28 inch, both at the breech end and at the muzzle, so it's not tapered. Five screw-in chokes are included and are coded with notches—skeet (five notches), improved cylinder (four), modified (three), improved modified (two) and full (one notch). The chokes are flush mounted, and a changing tool is provided.

This gun has one more unexpected

bonus—a set of spacers that you can put between the front of the stock and the rear of the receiver to change the amount of drop in the stock. This is an especially nice touch from Mossberg. For smaller-framed shooters, there is also an SA-20 Bantam model available with 24-inch barrel and 13-inch LOP.

We can talk all we want about this gun's specifications, but it's in the shooting that this semiauto really shines. Recoil is absorbed by the gas-operated mechanism, and handling can truly be appreciated with first-hand experience. The gun moves effortlessly, affirming its fine dynamics. I test a lot of \$5,000-and-up shotguns, and when you spend that much money you expect a lot. But, you'll pay a pittance in comparison for the SA-20 semiauto. If you try this one I know you will be just as pleased with it as I have been. After shooting mine hundreds of times, function has been 100 percent reliable. You can't ask more from a shotgun than this little semi delivers.

## Silver Reserve™ Side-by-Side

The second new shotgun is the Silver Reserve side-by-side, and with it Mossberg International has introduced the gun of long tradition. The barrels, opening lever, triggerguard, fore-end iron, through-bolt the barrels pivot on and monobloc lug that extends down through the bottom of the receiver are all blued. The receiver itself is brightly chromed, which should mean excellent corrosion resistance. There is engraving on the sides and bottom of the receiver as well as the triggerguard, and the "fences" are stippled to eliminate

glare when shooting in bright conditions. There's also a bit of scalloping on the receiver sides, which adds a nice cosmetic touch.

Lock-up with this side-by-side is absolutely solid. Two bolts in the bottom of the receiver move forward into recesses milled out of the bottom of the monobloc when the gun is closed. There's also the lug already mentioned that dovetails into a slot milled out of the bottom of the receiver. Additionally, a bolt from the top of the receiver closes on a lug milled out of the barrel extension (rear). Chambers are three inches, so you can shoot those magnum loads as well as 2¾-inch shells in 12-gauge models.

The safety is on the top tang, but it's not automatic, which is to say it does not go on safe when you open the action. Instead, it works just like a pump or semiauto safety. You have to physically put it on safe upon closing the action on a new shell, a system preferred by many shooters. The barrel selector is the safety itself, and you move it to the right to shoot the left barrel first or to the left to shoot the right barrel first. The mechanical trigger is gold plated.

The safety operates freely, so you won't have any trouble pushing it off in the excitement of a bird flush or when those incoming birds surprise you in your blind. The opening lever also works easily, so you don't have to be a stevedore to push the lever right. The gun closes with ease as well, and you hear a nice, satisfying *click*. The lever stays well to the right upon closing, which allows plenty of room for breaking in the gun.

The black walnut stock has a nice, soft sheen, which will please traditionalists who shun high gloss. There are also nice lines to this stock. The

## New Upland Guns

*Good lines and the best of traditional features make the new side-by-side Silver Reserve™ an excellent gun for the uplands.*

recoil pad is thin rubber, rounded all around and with the slick plastic insert at the top to help eliminate hang-ups on clothing when mounting. The pad's texture is soft, but not smooth, so it should stay put in your shoulder pocket after the first shot. Checkering is on both the pistol grip and the fore-end, and the latter is short at just over 6½ inches. Wood-to-metal fit is also good.

The barrel bores measure .719 for both right and left. The bluing on the barrels is a deep black, as it is on the triggerguard, opening lever, safety and fore-end iron. Five screw-in chokes are provided; two with four notches on the end of the choke measured .709 (.010 constriction—improved cylinder). The one with three notches measured .702 (.017 constriction—modified). The choke with two notches measured .692 (.027 constriction—improved modified). The choke with one notch measured .684 (.035 constriction—full).

The 12 bore weighed just under seven pounds—six pounds, 15½ ounces on my digital postal scale. The little fore-end weighed 7.3 ounces, and the 28-inch barrels weighed three pounds, 1½ ounces. Length of pull was 14 inches to the middle of the recoil pad, 14¼ inches to the top of the pad, 14½ inches to the bottom of the pad. Drop at comb is 1½ inches, drop at heel 2¾ inches.

The fore-end is removed by pushing in on the plunger exposed at the front end. Again, operation is straightforward in that the fore-end comes off and goes back on easily. Shells are extracted, not ejected, and this can be a nice feature. Automatic ejectors add considerable cost to a double gun and have a number of moving parts, any of which can break

*The engraved receiver of the new Silver Reserve™ series side-by-side is also scalloped for enhanced eye appeal.*

*The side-by-side has a traditional slim and trim fore-end that is only 6½ inches long and weighs just 7.3 ounces.*

down—usually when it's least convenient. Extractors are also preferred by many of those who reload their shotshells and don't want to have to search for empties on the ground.

This Silver Reserve side-by-side is affordable for just about every hunter out there. Many users buy an auto-loader or a pump gun because the

cost of a typical entry-level side-by-side is usually more than a thousand dollars. However, the Silver Reserve has a suggested retail price of just \$900.

In addition to the 12 gauge covered here, models are also available in 20 and 28 gauges, both of which promise to be excellent upland guns. ●

# A Visit With Iver Mossberg

**T**his year, O.F. Mossberg & Sons celebrates its 90<sup>th</sup> anniversary. Founded in 1919 by Oscar Frederick Mossberg, today it is helmed by his grandson, Alan Mossberg as chairman of the board, and with Alan's son, Iver, as CEO. As one of the few remaining family-owned companies in the shooting sports industry, the Mossberg family remains deeply engaged in the day-to-day operations.

We recently had a chance to sit down recently with Iver at the North Haven, Connecticut plant to discuss Mossberg's history in gun making, the current status of the company

## Staff Report

and what the future holds.

**Editors:** *How have you been involved in the company, leading to your position as CEO?*

**Iver Mossberg:** When I was 16 I did everything from dumping garbage cans to the point where I've held a job in just about every department on the factory floor, from drilling barrels to machining parts here in North Haven starting in 1976. I worked my way up through the ranks—factory foreman, toolmaker and taking over

quality control. This led to taking over the factory floor and my position becoming more of an operations job. I report directly to my dad (Alan) in my current position as CEO, which means I'm responsible for just about everything that involves the manufacturing of Mossberg firearms.

**E:** *What did it feel like to assume the responsibility of the company bearing your family name?*

**IM:** It was not handed to me. It was something I felt I had earned, and it was quite a proud moment. It was a burden, but a good burden—I can now do what I want with this com-

## A Visit With Iver Mossberg

**One of the earliest Mossberg's was the Brownie pistol in .22 Short.**

pany. It was a good feeling to know I could make it through the ranks of a family company.

**E: Is your father pretty much hands off when it comes to operating the company?**

**IM:** Very much so, almost to a fault. He's let me make mistakes, which is part of the learning process, but he's a remarkable man to work for and with, quite honestly. I love working on new products, as he does, but I would say he still remains very much involved in a positive way.

**E: Your passions in the shooting sports?**

**IM:** Love to hunt and shoot but am more of a hunter. Sporting clays is great, but I would rather hunt a flock of ducks, geese, teal, snow geese over clay targets any day. I like to hunt deer for venison whenever I can. Unfortunately, what is typical for manufacturers when you're making the product is you don't get to do as much [hunting] as you'd like, but we do quite a few field tests with our products and I'm directly involved in some of that product field testing. However, I won't be the first to sign up to shoot 1,000 3½-inch shells in one of our new shotguns!

**E: Do you recall what your first**

**Mossberg firearm was?**

**IM:** I remember shooting into a wood pile with a Brownie pistol (.22 Short), and I remember a Palomino .22 rimfire rifle that I shot a lot. Then I was given a Mossberg 12-gauge pump gun when I was around 11 or 12. I remember my dad teaching me to shoot it by hanging clay targets on a bean pole.

**E: What does it mean to you personally when you grab a shotgun or rifle off the factory-floor gun rack and you see the Mossberg name stamped on the barrel?**

**IM:** There are times when it's just another one of the many hundreds of thousands of Mossberg guns we make, but at other times it hits me that it's still pretty cool to see our family name on the gun. It's our obligation to make a very good product, and a lot of responsibility comes along with that—making a safe firearm and making it the best it can be—it's a proud feeling. When your name is on it, it hits home.

**E: Any idea how many total guns Mossberg has produced?**

**IM:** I know the Model 500 pump shotgun alone is over eight million, but how many firearms total? I really don't think we know with absolute certainty.

**E: Your father has been quoted as saying, "Mossberg is a testimony to the power of inspiration." Can you explain?**

**IM:** I think his reference is to new products. The people on the manufacturing floor offer ideas on new products or have a better way to making existing products better. We do utilize their feedback—inspiration from employees—and from his [Alan's] standpoint it's the inspiration of a company building new product. We've certainly come up with a bunch of them over the years. Numerous workers here in North Haven are hunters and shooters, and that's a good thing when it comes to feedback on our products.

**E: The book on the history of Mossberg is titled "More Gun for the Money." Is that the basic premise for how Mossberg operates today?**

**IM:** Yes, it is still what we do. We've gotten out of the "cheap" part of guns, and we've gotten into the "value" part of gunmaking. It is absolutely what we stand for, and it's something I'm proud of.

I don't want to sound pompous, but we give consumers the best product for the money. I sincerely believe that, and that will always continue even as we in some cases move to a higher-end gun—a fully tricked-out 835 or higher-end lever action. Whatever gun we offer will still be the best value for the money. The 4x4 is a good example of that. Sell them to a higher-end market and still get sub-MOA accuracy at a price point that beats most of the competition.

**E: Your profit margins could be greater. I'm fascinated by the fact that you hold the line as much as possible on pricing and price increases. That's somewhat unique to the industry. Can you explain the thought process that goes into those decisions?**

**IM:** We have a backlog through the end of the calendar year on orders. Price increases would slow down the

current demand we have for our firearms. But we want to keep it where current customers can afford to buy a Mossberg. A guy out there who is making minimum wage can still afford a Mossberg.

It gets back to the value of our firearms. I'm afraid if we lost sight of the value, we would lose sight of who we are to that customer who can still afford us. It's what made us who we are today, and I'm afraid if we ever strayed in terms of price point that we would lose our identity. Things are tough right now due to fuel prices and inflation.

***E: Value is still a core principle of your family?***

**IM:** Absolutely. Being privately held allows us [our family] to do things that maybe some companies who are publicly held simply can't do because they have to satisfy their stockholders with certain profit margins.

***E: An extension of price point is how Mossberg over the years has gone about getting youngsters into the shooting sports. Just think of all the single-shot and pump-action .22s you've made over the years.***

**IM:** It's something the Mossberg family is very proud of, and it has continued to be a growing segment of our market. When we sit around the new-product table, we're very conscious about what the younger shooter wants. For example, the new insert pads we have, the youth guns, the little Half-Pint Plinkster .22—we're very aware of the market and are able to give the parents, for example, a shotgun they can buy to introduce their youngsters to shooting.

***E: It is a way to introduce young shooters to Mossberg.***

**IM:** I can't tell you how many times we have heard from consumers that their first gun was a Mossberg. Normally, when you buy something and you have good luck with it you will continue to buy the same brand, and we'd like to think families will

grow up with Mossberg products. In a sense it's what keeps our business and industry alive.

***E: Do you work with any youth shooting programs?***

**IM:** We're involved in the Youth Shooting Sports Association (YSSA). Mossberg has made substantial donations in youth firearms to be used at different camps. It's something we do quietly, and we're not looking for credit, but we're a major contributor to NWTF (National Wild Turkey Federation), for example, the youth programs such as the Jake program and the Green Wing program with Ducks Unlimited. Very quietly and in a humble way, Mossberg is a major contributor to youth and youth sports.

***E: How did Mossberg get more actively involved in the turkey-gun market and the slug-gun market?***

**IM:** On the turkey market, when Federal came up with the 3½-inch 12 gauge in 1988, we partnered with them and offered the first shotgun version, the 835 Ulti-Mag pump. It was designed around a waterfowl load, but here was this organization called the National Wild Turkey Federation. It was like a perfect storm of sorts. After we announced the 3½-inch gun, we were asked to come in and make a presentation to NWTF. We excused ourselves from the room for five minutes and made a decision and said, "We're in."

To this day we command our fair share of the turkey market, and we remain strong partners with NWTF. And they've done such a great job as an organization. I never saw turkeys when I was a kid. They have obviously done a great job of transplanting birds and supporting public awareness and have done a lot to turn turkey hunting into the sport it is today.

***E: Mossberg was one of the early manufacturers who focused on the turkey market and partnered with NWTF.***

**IM:** A combination of that and the introduction of the 3½-inch shell by Federal really put us first and foremost into the turkey market.

***E: What about the deer market?***

**IM:** We were the first to offer the cantilever base on the shotgun barrel. Mossberg did it first—the rifled barrels, the porting, the camo stocks. The ammo companies helped build interest as well—the sabot slugs and the accuracy of new factory slug loads in concert with the rifled barrel vs. the smoothbore, where you used to be only able to shoot out to 50 yards. Then all of a sudden you could accurately shoot out to 100-plus yards.

***E: What about offering shotgun barrels as an accessory. How did that come about?***

**IM:** It started with the barrel/combo concept. It was always part of his [Alan's] core use, which was value to the customer. He's always pushed extra barrels since I was a youngster. He had a barrel promotion at one time that he was offering an extra barrel for like \$19, and I'll never forget how we got mail sacks full of coupons and requests for those barrels.

***E: The Combo concept, can you explain?***

**IM:** Yes, that goes back to the concept of more gun for the money. It's still a good percent of our sales, as are the aftermarket-barrel sales. The Flyway Series package for the waterfowler and Grand Slam series for turkey hunters are examples of that—full camo, extra choke tube, ported, matching camo sling...

***E: Mossberg is beginning to diver-***

## A Visit With Iver Mossberg

*CEO Iver Mossberg and his father Alan, Chairman of the Board, check out the 4x4 rifle.*

*sify more. Is this the key to surviving in today's market? And what is Mossberg's approach?*

**IM:** Diversification is important. Not all that long ago we were basically known only as a shotgun company. We realized we didn't want to be just a shotgun company. When sporting shotgun sales are slow, tactical guns could be better. When slug guns are slow, hopefully rifle sales are better. We will continue to diversify more and more, but in the firearms category only. We don't want to be distracted from our core business of making firearms.

*E: It appears you're looking to partner with other shooting sports manufacturers as well.*

**IM:** Absolutely. We see what's happening out there in the marketplace. We've developed a partnership with Taser, which is still in the early development stages. But what we can do in concert with Taser in the home-defense/LE market is huge. The opportunity to partner with another ammunition manufacturer, for example, is something that is a high priority for our organization.

We want to extend our brand. It's a natural progression and formula for growing our business, for us to reach the next level and at the same time supply consumers with product they want or need.

*E: Has the Mossberg family taken a step back to review what is happening in the shooting sports industry, i.e., consolidation, plant closings, buyouts, etc.?*

**IM:** Competitors are good for business, but these things (consolidation/acquisition) happen in all industries. We've seen it before. It doesn't make us change our business model, but it makes us dig deeper to give us a better sense of who we are and what we offer consumers and the market. Strategically, we always discuss what's going on in the industry, but we're minding our business first and foremost.

*E: Is there a benefit to remaining a small, family-owned business?*

**IM:** There are no layers here at Mossberg. It's Mark Kresser (vice president/sales and marketing) and me in a room saying, "Hey, here's an

idea...sounds good... let's tell the engineers to get started." We like to capitalize on certain opportunities quickly, and we can do that—our ability to be nimble in comparison to other manufacturers, the ability for us to simply say, "Do it" and it get done. That would take two years at some companies. We can do it in two months.

*E: Can you go into more detail about Mossberg's commitment and investment in research and development of new products?*

**IM:** We've committed millions of dollars into R&D and the latest technology (CNC machine, CAD systems, etc.), continue to invest in hardware/software and remain very much committed and continue to upgrade that department. The bottom line is new products, and we will continue to invest the money. Between R&D and manufacturing, our departments have increased in size and personnel. The model shop, we've even gone outside our company to generate more ideas, more cosmetic than mechanical.

Because we're a small company, actual engineers have a certain level of freedom. We don't always reinvent the wheel, but more often than not we do start with a clean sheet of paper, such as our 464 lever action. With that gun we didn't want to have any prior constraints. We took what we wanted to start out with with this gun and went from there. Consumers would probably be surprised to learn that some of these guns take a lot of time from start to actual production, so there are significant investments in both time and money.

In that regard, there has always been an open checkbook and an

open requisition to hire. There's never been one time where we [management] has said, "No more—you're spending too much, we have too many engineers..." There's never been one constraint. That's how important it is to us.

**E: *The Model 500 introduced in the early 1960s, is it the platform that vaulted Mossberg to where the company is today?***

**IM:** The actual design is not that different than what it was in the '60s—the same platform the 835 and 535 were built on, the military guns, the 3443 mil-spec testing. I don't see the 500 going away, even though it's almost a 50-year-old design. The line extensions we do are still there, and I see more variations coming and a couple things we're working on for the next generation.

**E: *Is the 500 hand's-off in terms of redesigning?***

**IM:** It's so proven. We simply don't want to mess with the recipe. There's not a whole lot of reason to, because we can still accomplish the new products we want using that same platform. There's nothing we would change as to how it works today. It's kind of like the 1911 pistol—people have added all the bells and whistles, but it's still the basic platform. Such is the case with the 500.

It's hard not to think about it—what is the longevity of a product?—but look what happens when you mess with a successful product. Sometimes it ends up being a dismal failure and companies go back to the original design or recipe.

**E: *The Mossberg tactical product line—very little coverage used to be given to that side of the business. Under your watch, is it one of your priorities?***

**IM:** I think it really started with the Y2K back at the turn of the century—our true first awareness, in 1999, where home defense became a part of our mainstream operation. After Y2K, things changed again, but to

Mark Kresser's credit home defense remained our focus. I don't think we were totally aware of what we could do with our guns. Mark, as an outsider who came to our company, offered a fresh, new perspective. Now, through his expertise of the marketplace and where the world is headed, it's definitely a direction this company will continue to pursue. We've always had our 590s and dabbled in that market, but we've never had the presence in the market that we've built today. Just In Case is a product example. This is a market I want to serve, just like the hunting market.

When people talk about protecting their family and you're the chosen product, that's huge. The U.S. government could have bought anything—they don't buy the next best thing. The fact that Mossberg has been chosen for certain government contracts, and on the homefront, that's a huge responsibility we take very seriously. You are putting your family's safety in our hands.

**E: *You've experienced some success in law enforcement. Is that the driver now in the tactical market?***

**IM:** Each one does feed off the other; we do apply military and LE concepts to the tactical guns we manufacture.

**E: *When you take a high-profile LE agency like the New York Police Department and the fact that these guys are counting Mossberg to protect their lives...***

**IM:** It's a heavy obligation, and it's a proud feeling. It's a lot of responsibility that comes with that. But knowing we make a great product, we have to have confidence in what we do. It does trickle down to the workforce, which is very much aware of the fact that some of these guns are going to law enforcement and military. So whether the guns are going to the NYPD or Iraq for our troops or a consumer stateside, we make sure it is the best firearm that goes in the box. There's a great deal of pride in what we do here in North Haven.

**E: *What can the consumer expect in the future from Mossberg? Maybe new variations of lever guns, centerfire rifles, pump guns?***

**IM:** To answer, Yes, yes and yes! Maybe something as entrenched as the 500 is, you can expect to see some new things there. The lever action is now only in plain-vanilla .30-30, but you will see almost an endless array of chamberings, octagonal barrels, saddle rings, wood choices. So the answer is Yes; the ideas keep flowing, and we remain committed to R&D. The pipeline is full of ideas. It's exciting all the way around; it's continuous innovation throughout. Can't give you more specifics, but keep watching us, as we are on the fast track in terms of ideas. If you sat here [in the Mossberg conference room] on a recent morning and heard what we talked about in terms of new products, you would be amazed.

**E: *Is the family committed to keeping Mossberg a family-owned business and totally committed to the shooting sports?***

**IM:** Our commitment is strong; I don't ever see us cashing out. It's enjoyable, fun; it's a legacy of sorts that we're very proud of—being able to defy the odds and not sell out like others have. We haven't been gobbled up by a bigger corporation. I believe we will remain a privately held company for the foreseeable future. Speaking for my father, to be able to hand the business over to another generation of Mossbergs would be our hope.

The Mossberg tradition and place in the shooting sports industry are well recognized, established and secure. The family remains engaged and passionate about the company, about the industry and about the sports of hunting and shooting. That can only be good news for the millions of hunters and shooters who have Mossberg firearms in their gun cabinets or who are considering taking a new Mossberg rifle or shotgun to the range or into the field. ●

Slug guns aren't just for whitetails anymore.

By Dick Metcalf

# Mossberg Slug

**W**ith the advent of full-rifled barrels and high-performance sabot slug ammunition, today's 12-gauge slug guns can deliver advanced-design 385- to 400-grain bullets with the same

energy at 100 yards as a 180-grain .308 Winchester. And this is with 50 percent more energy at 100 yards than a 300-grain .45-70 and two-inch accuracy as far out as 150 yards.

These slug "rifles" are as effective

at medium-range hunting for heavy/dangerous animals such as bear, wild boar or bison as for deer. Mossberg has always been a leading player in the modern slug-gun revolution, with a wide variety of available models

Any of Mossberg's 12-gauge rifled-barrel slug guns are great woods tools for either whitetails or dangerous game.

*The 930 cantilever mount keeps the barrel and optics aligned at all times and makes changing barrels a snap.*

them, I like them.

Mossberg's newest entry in the burgeoning slug-gun market is the 12-gauge 930™ autoloader, available in a variety of configurations and finishes with recommended retail prices running from only \$518 to \$628. The gas-operated 930 slug gun features a 24-inch full-rifled barrel and handles both standard 2¾- and three-inch magnum ammunition. The smooth, contoured design and Mossberg Uni-Line receiver delivers instinctive eye alignment for instant target acquisition. A self-regulating gas system cushions the recoil. Finish options include a blued receiver with walnut stocks, blued receiver with black synthetic stocks or overall camo with synthetic stocks in either Mossy Oak New Break-Up or Realtree AP finish.

The 930 Autoloader has numerous features normally found on more expensive shotguns, yet it still embodies Mossberg's no-nonsense approach to design. For example, each 930 slug gun comes with a complete set of specially designed spacers for quick adjustment of the horizontal and vertical angle of the stock, providing a custom-feel fit to every shooter.

Customizing the stock is easy. After making sure the gun is unloaded, its chamber is open, and it is pointed in a safe direction, remove the recoil pad (screws will remain in the pad),

and remove the stock nut using a ¾-inch socket wrench. Then remove the stock-nut spacer and stock and the existing stock retention plate from its oval recess in the stock. Place your selected stock spacer on the back of the receiver, with the text side facing out. Then reinstall the stock with the matching retention plate in the oval recess.

Remember to install the retention plate with the text side facing out and right-side up; you should be able to read the markings right-side up when looking into the butt end of the stock. Finally, reinstall the stock nut spacer and stock nut, and replace the recoil pad. You may want to spend some time trying the different included spacers; very slight differences will significantly alter the feel of the gun.

Another excellent 930 feature is the EZ-Empty magazine button/bolt-lock release on the right side of the receiver. When the bolt is locked to the rear, it can be released to go forward (and load the next shell in the magazine tube) simply by pressing the button, without any need to depress the shell elevator, as is necessary on certain other makes of shotguns. This is quick and convenient without breaking your shooting position, whether you are right- or left-handed. The same button can be used to quickly and safely unload

# Guns

and variations of fully rifled auto-loading and pump slug guns. All feature Mossberg's unsurpassed reputation for reliability and performance, with advanced features at remarkably economical prices. I use them, I trust

## Mossberg Slug Guns

*Mossberg's 930 slug gun and 464 .30-30 carbine both proved to be effective boar-stoppers for media representative Mark Sidelinger (left) and the author in Pennsylvania's Allegheny Mountains.*

shells directly from the magazine tube without having to cycle them through the chamber or dump them from the ejection port while holding back the bolt.

To clear a fully loaded 930, the recommended procedure is to first remove the shells from the magazine tube. With the bolt forward in battery, make sure the manual-safety button is fully rearward in the Safe position, and with the muzzle in a safe direction, turn the gun so the triggerguard is facing upward. Depress the elevator, and while holding it down with your thumb, press the bolt-release

button. This will release one shell from the magazine tube under spring pressure. Repeat this procedure until the magazine tube is empty. Then pull the operating handle fully rearward to eject the shell in the chamber and lock open the action. To my mind this is a vastly superior setup than any gun that requires shells in the magazine to be cleared through the chamber/ejection port.

I'm also very fond of the receiver-top manual safety Mossberg uses. Mossberg has always felt that having the safety on the back of the receiver enables the hunter to feel the safety

without having to look at it. I personally find it much more convenient to operate than typical crossbolt safeties that are located in the triggerguard. Plus, it is equally accessible and operates consistently regardless of whether you're a right-or left-handed shooter.

All Mossberg 930 models also feature an automatic cocking indicator (which cannot be manually activated or deactivated) that protrudes from inside the front of the triggerguard when the action is cocked. Unlike other firearm cocking indicators that require the shooter to look at them or

feel for them at a different location on the gun, the Mossberg system can be readily felt by the trigger finger with the gun in the firing position at the moment of truth without taking your eye off the target.

The Mossberg 930 slug guns also come with a receiver drilled and tapped for convenient installation of an optics mount base. Plus, depending on which version of the 930 slug gun you chose, you can either have a 24-inch barrel equipped with fully adjustable Williams-style rifle sights or one equipped with an integral cantilever Weaver-crosscut optics mount base that extends backward over the receiver. On any exchange-barrel shotgun system it's always better to have your sight—optic or metallic—attached directly to the barrel instead of the receiver to eliminate displacement of point of impact due to barrel/receiver flex or differences in alignment that may result when barrels are switched. With a cantilever-mounted optic, you can take the barrel off to use your 930 with any of Mossberg's (many) available waterfowl, upland or clay-target barrels and still have it on-zero when you return it to the gun. Any way you cut it, the Mossberg 930 has everything a serious slug hunter could ask for.

But maybe you're a pump-gun fan. Here, Mossberg's Model 535 ATS™ (All Terrain Shotgun) marks a new era for Mossberg pump-action shotguns as well. Influenced by the success of the three-inch-chambered 500° and the 3 ½-inch-chambered 835°, this shotgun brings the best attributes of both models, delivering outstanding versatility. It's chambered to handle 12-gauge 2¾-, 3- and even 3½-inch magnum loads, for maximum stopping power.

The Uni-line receiver design assists in fast target acquisition and features the 500 pioneering Quiet Carry dual-action bars, as well as the standard Mossberg receiver-mounted safety. The 24-inch, full-rifled Slugster®-version barrels are available either with fully adjustable rifle sights or a cantilevered scope-mount sys-

***A unique system for unloading the magazine of the 930 allows shells to be removed without cycling through the chamber first.***

***A receiver safety makes the Mossberg 930 simple to use for both left- and right-handed shooters.***

tem so that barrels can be swapped without disturbing a well-sighted scope.

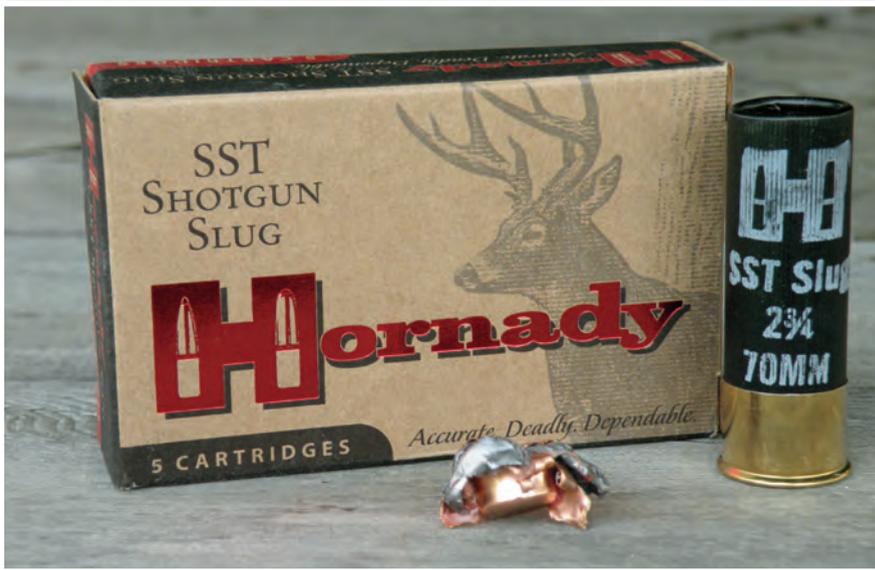

The 535 ATS sleek barrel profile coupled with a shortened magazine tube provides a comfortable balance

and swing. A wide range of finishes is available in satin blue/walnut, black synthetic or Mossy Oak and Realtree camo. There's also a complete line of interchangeable field, turkey and waterfowl barrels in compatible finishes

## Mossberg Slug Guns

***A cocking indicator, located inside the triggerguard, is easily accessible to hunters while they keep their eye on the target.***

***This Hornady slug recovered from a boar shows complete upset.***

with lengths from 22 to 28 inches, interchangeable chokes and a variety of rib, bead and fiber optic sight options. Like the 930 autoloader, the 535 ATS offers features usually found on shotguns costing much more, all built into a lightweight design that's easy to carry into the field.

Recommended retail prices run from \$355 to \$525, depending on the version (the Turkey/Deer Combo

model with 22- and 24-inch barrels, camo finish and fiber optic sights at \$459 is a spectacular value). Incidentally, Mossberg also offers a variety of similarly featured slug-barrel versions of its 3½-inch Model 935™ autoloader, the 3½-inch Model 835 Ulti-Mag® pump-action and the classic 500 pump shotgun; all are equally distinguished by a wide range of features and options and at equally

accessible prices.

During the past three years I've used both the Mossberg 930 autoloader and the 535 ATS pump slug guns with great success on whitetails at home in Pike County, Illinois, and last summer I had the opportunity to join Mossberg's C.E.O. Iver Mossberg, VP of sales and marketing Mark Kresser and their media representative Mark Sidelinger for a boar hunt with the 930 at the Tioga Hunting Preserve in the dense brush of Northern Pennsylvania's Allegheny Mountains. We were using Hornady's excellent 300-grain SST sabot slugs, which were averaging just a freckle under two inches for three shots at 100 yards from my gun. We were also equipped with the new Mossberg lever-action 464 rifle to try out Hornady's 160-grain .30-30 LeverEvolution ammo on these tough-hided animals (for a detailed review of the 464, see Layne Simpson's article on page 42).

The quarry ranged from medium-weight feral hogs to 300-plus-pound Russians. Everything we shot at went right down. My first hog fell on its nose from a full-penetrating broad-side chest shot from the 930 slug gun at about 35 yards. Mark Sidelinger stopped a 250-pound Russian boar that had decided to come right at him dead in its tracks at about 30 feet with a single 930 slug that entered the front chest, went the full length of the body and didn't stop until it lodged in the rear hip.

I also managed to drop an even bigger Russian boar out of the same group with a clean shoulder shot from the 464 lever-action at about 40 yards. The recovered Hornady slugs and bullets all showed complete upset performance with remarkable penetration.

The extensive modern Mossberg slug-gun models are accurate, reliable and effective on a wide range of game. For a slug-gun hunter there's no better value or performance on the market. I've now taken deer, bear and boar with them. Slug guns ain't just for whitetails anymore. 

# GET SERIOUS.

## 464™ LEVER-ACTION RIFLE

Superiority that sets it apart from the herd... style and class recognizable at first glance... these are the qualities of a jaw-dropping trophy buck — and of the 464™ Lever-Action by Mossberg.®

The 464 is our modern, American-made take on this true hunting legend.

All the hallmarks of traditional levers are here, combined with modern advancements like a smooth, robust action and ergonomic top-tang safety. And now, with the creation of flexible-point spitzer rounds, serious hunters can load the 464's tubular magazine for improved ballistic performance at even greater distances downrange.

So step away from the herd, visit your dealer and pick up our innovative interpretation of this all-American classic. The Mossberg® 464™ — 'cuz hunting ain't catch and release.®

# A Classic Reborn

Mossberg's 464™ extends the tradition of fast-handling lever guns with a smooth action and field-worthy accuracy.

By Layne Simpson

WARNING BEFORE USE, READ OWNER'S MANUAL FOR SAFE OPERATION

## A Classic Reborn

**Sub-two-inch groups at 100 yards with a number of different loads make the 464 a deadly deer gun.**

The message I received reminded me of a line from the old “Mission Impossible” television show: “Your mission, should you choose to accept it, is to hunt whitetail deer with Mossberg’s new 464™ lever-action rifle and file your report by late August.”

Shooting a good whitetail is not exactly an easy assignment, but it is not an impossible one if you know where to go and how to hunt. I will have to admit, though, that this particular mission was made a bit more challenging since deer season opens much later than August in most states.

One of those states happens to be

South Carolina, where the season in more than 20 counties, or roughly half the state, is open from August 15th to January 1st. As far as I know, that’s the longest deer season in the nation.

It is an interesting time of year to be in the field; the bucks are still in velvet, and since the rut is weeks away they hang out in bachelor groups. It is not unusual to see a dozen or more bucks feeding in the same field.

So it was South Carolina for me, and the outfitter of my choice was Hayward Simmons, who owns Cedar Knoll Hunting Lodge. It’s a comfortable place, nestled among huge live

oaks decorated with Spanish moss on Lakeview Plantation (803/584-0689). I’ve known Hayward for more than 20 years and hunted with him several times in the past, but it had been quite some time since our paths had crossed, so I was looking forward to not only a great deer hunt but a bit of reminiscing as well.

Removing the 464 from its factory box was like greeting another old friend from the past. As a youngster, I killed my first deer with a borrowed Winchester Model 94 in .32 Special, and the very first store-bought deer rifle I owned was a Marlin Model 336 in .35 Remington. Despite the fact that the woods are full of rifles that shoot flatter, hit harder, kick meaner and make more noise, I have never lost my fondness for lever-action hammer guns. So you can believe me when I say I was looking forward to hunting whitetails with the Mossberg 464. There is much to appreciate about this rifle.

For starters, a thin receiver makes the 464 one of the most comfortable rifles to carry with one hand. Weighing less than seven pounds, it is the kind of light, quick-handling deer medicine you can carry all day long and for days on end without stress or strain. With an overall length of 38½ inches, it’s also handy to tote through thick brush or maneuver in a tree stand or ground blind. On top of that, should the first shot go astray or a finishing shot be required, few rifles are quicker on the follow-up shot than a lever action.

All of these elements combine to make the lever-action hammer gun the quintessential eastern deer rifle. It’s been that way for more than a century, and it will likely be that way for as long as deer are out there to be hunted.

Other design features of the 464 include a hardwood stock and forearm and a 20-inch, barrel with a rifling twist rate of 1:10 inches. A tubular magazine attached to the bottom of the barrel holds six .30-30 cartridges and is charged through a gate in the side of the receiver. Cartridge

### MOSSBERG 464TH ACCURACY CHART

AMMO TYPE	VELOCITY (FPS)	GROUP (IN.)
Federal 125-gr. HP	2,512	2.10
Federal 150-gr. FN	2,284	1.51
Remington 150-gr. Core-Lokt SP	2,247	1.76
Hornady 160-gr. SST	2,363	1.79
Federal 170-gr. Partition	2,209	2.27
Remington 170-gr. Core-Lokt SP	2,173	1.44
Remington 170-gr. Core-Lokt HP	2130	2.63

NOTES: Accuracy shown for each load represents an average of three five-shot groups fired at 100 yards. Velocities are averages of 15 rounds.

feeding from magazine to chamber is the same as for the Winchester Model 94 but differs from that of the Marlin Model 336. In the Mossberg and Winchester rifles, the carrier lifts a cartridge to chamber level on the forward stroke of the finger lever, while the carrier of the Marlin is activated on the return stroke of the lever.

The Mossberg 464 has a breech bolt of cylindrical shape, similar to that of the Marlin, but it is locked into battery by a sliding locking bolt at the rear, same as on the Winchester 94. The roof of the receiver of the Mossberg rifle is quite different. Whereas the Model 336 receiver is totally closed at the top and the Model 94 is totally open, the 464 receiver is closed at front and rear and left open in the middle.

This makes the 464 receiver a bit lighter than the Model 336 receiver, and its closed rear section makes it a bit more rigid and suitable for scope mounting than the Model 94. Whereas the Model 336 has a fixed ejector housed in the left side of its receiver, the ejector of the 464 and the Model 94 Angle Eject are the spring-loaded type located in the bolt.

All three rifles are designed to prevent firing in the event that the trigger is accidentally pulled before the lever and breech bolt are fully closed. This is accomplished in the Marlin by a two-piece firing pin. In the Mossberg and Winchester rifles the same cat is skinned by placing a shorter pin called a firing-pin striker in the sliding locking bolt. Only when the locking bolt is elevated to its fully locked position are the striker and firing pin aligned to allow the hammer to transfer its blow to the firing pin through the striker.

A second safety feature in the three designs prevents the trigger from being pulled unless the lever is fully closed. On top of all that, when a sliding thumb safety located on the top tang of the Mossberg rifle is engaged, the hammer cannot reach the striker when the trigger is pulled. To me, this is a more convenient arrangement than the side-mounted

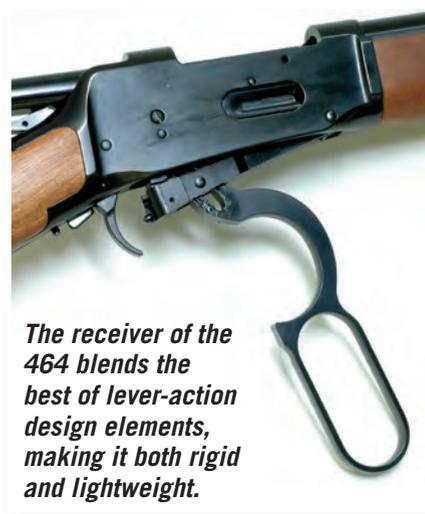

*Shooting in low-light conditions or at longer distances calls for a scope. The rear sight of the Mossberg 464™ folds down to make the process easier.*

*A number of safety mechanisms help prevent unintentional firing, including an easily accessed sliding thumb safety.*

safeties of the Marlin and Winchester rifles. (Here's a tip: Anytime you need to lower the hammer on a loaded round, engage the safety first.) Trigger-pull weight on the 464 I hunted with was 5½ pounds.

As a rule, the amount of drop-at-comb of stocks on lever-action rifles with tubular magazines is correct for positioning the shooter's eye in alignment with open sights, and the 464 follows this tradition. This is the way it should be, since open sights are still the best choice for some hunting applications, such as hunting black bear or mountain lion with hounds

*The receiver of the 464 blends the best of lever-action design elements, making it both rigid and lightweight.*

## A Classic Reborn

*The rear sight is adjustable for elevation and windage and folds to allow low scope mounting; the front is a traditional gold bead.*

*The top of the receiver is clean and drilled and tapped for scope mounting. Note the heavy side-eject extractor.*

where shots usually come close and quick. For that type of application, an out-of-the-box 464 is ideal.

The front sight has a large, gold-colored bead measuring .100 inch in diameter and held in place by a dovetail machined into the barrel. Fully adjustable for windage and elevation, the rear sight is also dovetailed to the barrel, and a white diamond highlights the notch. The rear sight can also be folded down and out of the way for mounting a scope.

The handy little Mossberg has

ample accuracy capability for shots beyond the range at which most of us are proficient with open sights. For such instances, the 464 comes with four holes drilled and tapped in its receiver for attaching scope mounts. A good scope transmits light to the eye during low-light conditions when game movement is often at its best, and it is just the ticket for hunting black bear over bait since the big boys often wait until most of the light has drained from a day before coming in. Except during the rut, trophy

whitetail deer can also become a bit bashful about being seen at anytime other than early morning or late afternoon, when ambient light is at its worst, which held true for my hunt in South Carolina.

Mounting a scope on the 464 is as simple as removing four dummy screws from the tops of its receiver ring and bridge and installing a mount of your choice. The two-piece base I used was a Weaver and its two sections are identical. When it's attached, the rear section overhangs the rear of the receiver bridge, while the front section overhangs the front of the receiver ring.

Like the Winchester Model 94 Angle Eject, the Mossberg 464 is designed to eject fired cases to the side. I found the ejection of cases to be so smooth and trouble free, I think Mossberg should seriously consider giving that feature a clever name. Positive Eject perhaps?

Shooting the 464 reminded me of how far we have advanced in the accuracy department since I bagged my first deer with a lever action many years ago. In those days, four inches at 100 yards was quite acceptable, but every current-production lever gun I have worked with during the past decade has averaged two inches or less with at least one load.

My 464 arrived with two three-shot groups fired on a 50-yard indoor range, one measuring .583 inch and the other went an even more impressive .351 inch. That's roughly a .93 minute-of-angle average, and while I was unable to duplicate that level of accuracy I do have what I consider to be a decent alibi: I fired five-shot groups rather than three-shot groups, and I did it outdoors with a bit of wind.

In my opinion, any lever-action rifle that will average less than two inches at 100 yards for five shots is worth sharing a deer hunt with. As you can see in the accuracy results chart, the 464 I hunted with made the accuracy cut with room to spare, and it did so with several loads. That's 2009 bolt-action accuracy from a rifle

## Mossberg Model 464

**Caliber:** .30-30 Winchester

**Magazine capacity:** Six rounds

**Barrel length:** 20 inches

**Rifling:** Six grooves, 1:10-inch twist rate

**Overall length:** 38½ inches

**Weight:** 6.8 pounds

**Sights:** Fully adjustable rear, brass bead front

**Stock:** Hardwood

**Wood finish:** Synthetic satin

**Butt treatment:** Rubber pad

**Sling swivels:** None

**Length of pull:** 14 inches

**Metal finish:** Blued

**Safety:** Internal plus slide atop tang

**Accessories:** Gun lock, owner's manual

**MSRP:** \$473

with a basic design that goes all the way back to 1894.

The hunt for whitetail deer with Hayward Simmons brought back memories of the past in more ways than one. It had been about 17 years since we had hunted together so we had a lot of catching up to do.

Hayward and I had changed a bit, he missing a hair or two from his head and me with a couple of inches added to my waistline, but Cedar Knoll Lodge was exactly as I remembered it. I even got to stay in the room I favored in the old days.

The hunt also brought back to mind the challenges of hunting deer in South Carolina in August. The rut is still weeks away so mature bucks hang out in bachelor groups and since the weather is usually extremely hot, they do most of their feeding

during late afternoon and on into the night.

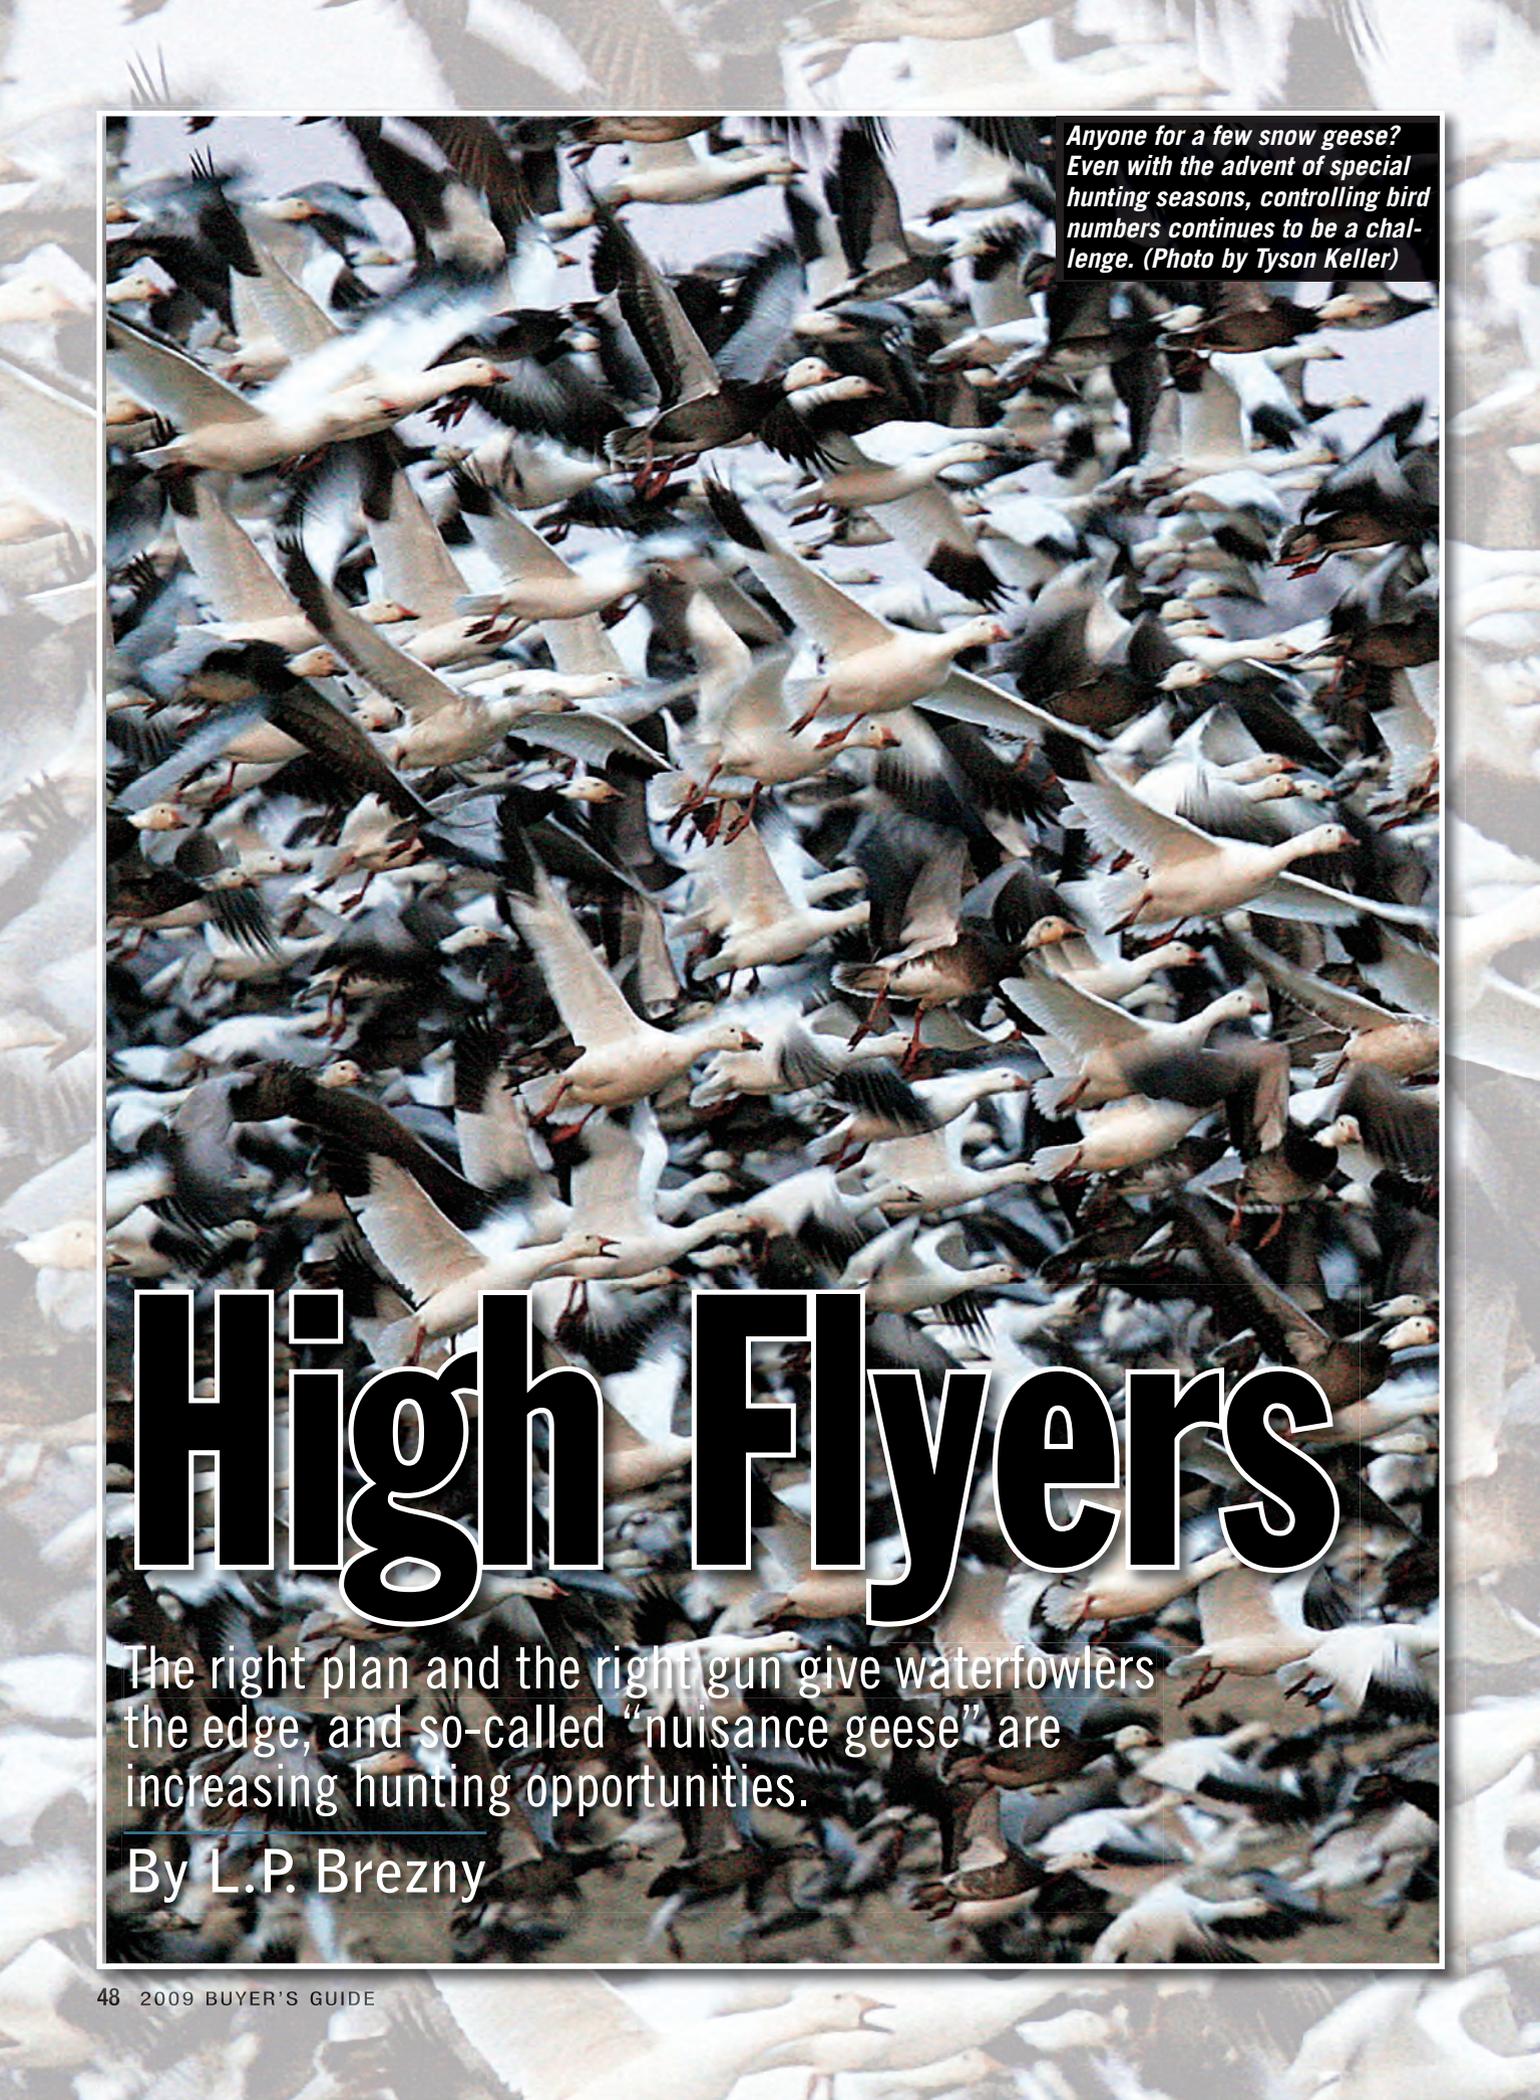

Morning hunting is generally a bust, leaving about the last two hours of daylight as the prime time to see a good buck. But there are a lot of good deer in that country and if you spend enough afternoons in the woods,

the odds of spotting one with your name on it are quite good. And that's exactly what happened on the fifth day of my hunt.

When I first spotted the deer they were about 150 yards away and headed toward me. By the time I was ready to shoot the best buck in the bunch had closed the distance to around 75 yards. A single shot from the 464 rang through the woods and suddenly I was 15 years old again. You see, I bagged my first deer many years ago with a borrowed Winchester Model 94 in .32 Winchester Special. If I have anything to do with it, the one I took more recently with the Mossberg rifle will not be the last I take with a classic lever gun. ●

## LEVERAGING VALUE

The 464 is not the first lever-action deer rifle to fly the Mossberg banner. Back in the 1970s there was the Model 472, which looked a lot like the Marlin Model 336. Like the Winchester Model 88 of that era, its trigger moved with the lever when the bolt was cycled. Available with 18-, 20- or 24-inch barrels in .30-30 or .35 Remington, the Model 472 sold for \$132.60 when respective prices of the Marlin 336 and Winchester 94 were \$116.95 and \$115.95. Today the shoe is on the other foot, as the Mossberg 464 is a few dollars less expensive than the Marlin 336.

*Anyone for a few snow geese? Even with the advent of special hunting seasons, controlling bird numbers continues to be a challenge. (Photo by Tyson Keller)*

# High Flyers

The right plan and the right gun give waterfowlers the edge, and so-called “nuisance geese” are increasing hunting opportunities.

By L.P. Brezny

**B**ack in the 1970s when I first started hunting Canada and snow geese, just spotting a single flock during a hunt was a major accomplishment. While hunting opportunities were plentiful, the birds were few. Some 40 years later the complexion of goose hunting has changed dramatically. Land mass associated with productive hunting areas has been shrinking, but bird numbers have risen to a point almost beyond belief.

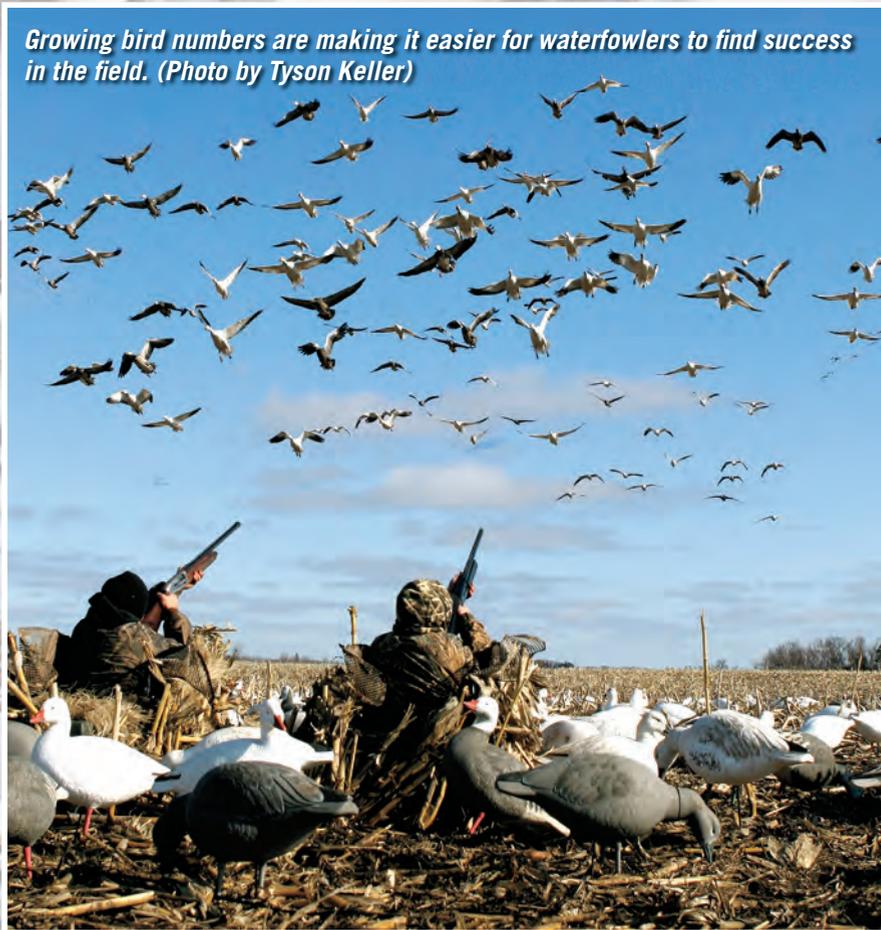

Geese populations have increased so much that today we have resident (non-migratory) geese living near major cities, and bird numbers in breeding areas to the far north are so high that the geese are destroying their own reproduction areas. The Arctic tundra is dying a slow death because the white birds overgraze the available resource. Hence there's a new term in hunting and conservation circles—nuisance geese.

For the most part, I'm not fond of the term. If you came from my background as an old-school hunter, you know that for years waterfowlers regarded geese as the ultimate prize. We spent weeks on end hunting them, and when not in the field, we stayed busy concocting better shotshells to harvest these high-flying birds. I got my start in writing about hunting and ballistics when I was in my mid-20s, and it was about that time the gray Canada geese had been rediscovered in my home state at Silver Lake in Rochester, Minnesota. Over the years I've learned a lot about these fascinating animals. They have strong family traits, live for as long as 18 years and mate for life in most cases. Another interesting fact is that if a lead bird lands his flock with some members wounded or missing, the whole gang kicks his tail and a new top bird is chosen. I have witnessed this leadership-role behavior over the years, and to be sure it is something special.

## Extended Seasons

One inevitable result of growing geese populations has been increased hunting opportunities. These have come through special seasons

*Growing bird numbers are making it easier for waterfowlers to find success in the field. (Photo by Tyson Keller)*

and can amount to doubling the traditional waterfowl hunting in a given year. With spring snow goose hunting, gunning time is increased a full month or more in many states along the Mississippi flyway, and an early special fall Canada goose season has taken hold in numerous states along the big river flyway as well as points west.

So, how should hunters approach these extra spring and fall hunting dates? For the most part, the spring hunt is not much different from the fall. The key is locating birds on the migration route and then simply getting permission from farmers to access the mud-soaked winter fields where migrating flocks like to feed. Because snow geese tend to follow the snow line closely, the hunting is almost always in wet fields. In the fall, you can find birds on resting areas and refuge boundaries, but this is far more difficult in the spring. A flexible game plan and plenty of artillery will usually make the difference between failure and success.

Last spring, while hunting with the boys at Avery Outdoors in South Dakota, I marveled while watching Tyson Keller, an Avery goose guide, set up a three-day hunt. It was akin to a military operation in size and scope and included outfitting ATVs with quad rear wheels and rubber tracks for mud running, setting out 800 full-body-motion decoys and arranging a special flying decoy system that made use of automated, battery-powered birds. Added to all this was a custom sound system that used recordings of real geese. It was a deadly trap, and setup began at 2:00 a.m. on the day of the hunt.

Is all of this required to hunt snows in the spring? No, but it sure helps. On our hunt, six of us took 123 birds in three outings. Tyson said it had been a mediocre hunt. (I would like to see a good one.)

Tyson admits that getting the decoys into the field is tough, but scouting and working with farmers is really the key. If there's no land, there's no hunt, decoys or not. That's the rub

## High Flyers

*Hunting public land near the Wyoming border, Lance Lalonde and Crocket take their first bird of the South Dakota September early season.*

*Both spring and fall can be productive. Here, the author poses with a few spring-harvested snow geese.*

*Special late-season hunts for Canadas are being offered to control bird populations in some states. (Photo by Tyson Keller)*

today in some areas. I have hunted places in Missouri and Texas where there is no public land for miles around the refuge systems that geese use, either in spring or fall. Living in South Dakota, I have been blessed with land set aside for hunting and in many cases have hunted successfully with farmers who understand the needs of goose hunters.

The approach to gunning Canada geese is similar, because hunting

in fall really just means getting the program underway a month ahead of schedule. In many states the non-migrating “nuisance” goose season starts the first week of September, and Minnesota regulators have even talked about moving the dates into August. The challenge here is that you end up hunting in shorts under your layout blind, hopefully with copious amounts of bug spray on hand at all times. The advantage, however, is

that birds are young, and it’s easier for hunters to take less experienced birds that are more apt to fly low over decoys.

### Big Guns

During the years I lived and hunted Canada geese in Minnesota, I often had opportunities to gun for those non-migrating “city birds.” Several friends had fall-cut alfalfa fields located about two miles from an area shopping mall. Canada geese will always gravitate to short grass, just as they did 150 years ago on the buffalo-grazed water holes of the Great Plains states. These nutrition-rich green fields were a magnet for every goose within a five-mile area. With small pocket ponds littered throughout, there was no shortage of birds, and the area amounted to a personal goose factory.

With the vast majority of the dark geese being descendants of the Giant Canada goose, the birds we hunted would top the 14-pound mark more often than not. The term “big bird” was an understatement, and herein lies the need for a special goose gun such as Mossberg’s heavyweight 835°

Ulti Mag® in 3½-inch 12-gauge Magnum. This “long 12” had been developed in my backyard at the Federal Cartridge facility in Anoka, Minnesota, and Mossberg was the partner gun company, designing and building the first 3½-inch-chambered 12-gauge shotguns ever produced.

While many readers may be too young to remember, this new gun and load met a cynical and doubtful press. Many a gunwriter stated flatly in print that, “the gun system will never work.” Well, the naysayers were dead wrong. The 3½-inch 12 gauge proved to be just the ticket for spring snow geese flying wild and high on a south wind or big Canadas cutting the far edge of a decoy spread. The lightweight steel shot was highly effective when increased in size and packed into the “long 12.”

The new 3½-inch shell was so potent that within a year of trying it, five hunter friends of mine sold off their 10-gauge double guns in favor of Mossberg’s 835 Ulti Mag. This was to be an omen of sorts, as within a five-year span the 10 gauge had turned into a relic among many goose hunters. The 3½-inch 12 gauge carried the same energy as the 10 gauge, same payload of shot and patterned nearly as well. It was enough to warrant turning to the 12 gauge that could shoot everything from 3½-inch goose loads all the way down to the old English 2½-inch target rounds. Mossberg transformed the goose gun, making it not only powerful but versatile as well.

## Proven Strategies

If you want to double up on a year of goose hunting, keep several key points in mind. First of all, scouting is paramount. If you aren’t hunting where the geese are, you’re wasting your time. Good guns, loads and decoys won’t help you a bit. Figure at least a full day of scouting, if not more, before most hunts. Use the Internet to help locate the main migration of spring snows across the central flyway. In the fall, hunt areas that have held birds (Canadas) all summer or are known to be general

*Hunting tactics for special seasons are not all that different from those of the traditional hunting year, especially when it comes to having a good dog at your side.*

feeding areas.

As an example, one of my best early-season fall Canada hunting locations is right in the middle of a public hunting area. The area is a small sand bar on an open river in Wisconsin where I use a handful of floater decoys. With a small powerboat and a good dog, the hunting has been outstanding every September for the last seven years. My strategy here is intercepting passing geese in the morning as they move to feeding areas across the river into Minnesota.

In South Dakota I turn the whole thing around and hunt a small marsh area well out on a wide flat. I discovered it with a friend on a public lands map. It was not marked, and you would never have known it was open to public hunting. Early-season hunts are generally good because the geese have used the small pond on the land all summer long. These are non-migrating birds, and as such, they qualify as nuisance geese and require a good deal of thinning.

What you don’t want to do is become static. I know of a hunter who has been coming to South Dakota during the spring snow goose migration for five years with no luck at all. He uses a single farmer’s fields that

may or may not hold birds. In his case it is usually the latter. You have to be mobile and ready to move in and out of an area quickly if required. A field can be hot one day and ice-cold the next. The flock you hunted the day before can be sitting two miles away in another cut corn field or wheat stubble patch.

Second, use good decoys, and use enough of them. With Canada geese you can get by with fewer, especially when hunting water, but snows are a different story. Here you need quality blocks, and a whole lot of them. Not interested in getting into the full-size spreads? Then you can concentrate your hunting efforts on fence lines and bushwhack birds on the up-wind side, although this is really a hit-and-miss strategy.

The third and final element to consider is the aforementioned firepower. The advantages of the 3½-inch 12 gauge can’t be stressed enough. Most professional goose hunters tend to prefer the 3½-inch to anything else, primarily because the larger shot size and higher shot count are critical to success on big, high-flying birds. Mossberg’s line of 3½-inch chambered waterfowl guns fit the task in every way.

*Whitetail outfitter Hayward Simmons, whose hunters have taken several thousand deer since the 1980s, closely agrees with the experience of the author.*

# Bullets and Bullet Placement for Whitetails

By Layne Simpson

**H**ayward Simmons has owned and operated Cedar Knoll Hunting Lodge near Allendale, South Carolina, since the mid-1980s and is one of the best, most successful whitetail guides and outfitters I have had the pleasure of hunting with.

I first hunted with him around 1988 and have long been impressed not only by his knowledge of deer

*The Fusion bullet from Federal represents a good compromise in design—soft enough for a lung shot but tough enough to hold together and penetrate on a shot to the shoulder.*

management and deer hunting but also by his great interest in rifles and cartridges. Hayward has now scaled back his operation considerably, but there was a time when it was not uncommon for his hunters to take upward of 500 deer in a season.

What makes all of that fit into this story is the detailed data he has accumulated on hundreds of kills. As an example, during one season in particular his hunters took 493 deer with 603 shots fired, for an average of 1.22 cartridges per deer. Other interesting data includes how far away each deer was when it was shot, what cartridge and bullet were used, where the bullet was placed, how far the animal traveled after being shot and everything else one would desire to know about cartridge and bullet effectiveness.

As for bullet placement, Hayward's data reveals that the average distance traveled by a deer after being shot through the lungs is 50.4 yards. Some drop more quickly and others run farther, but that's the average. The cartridges used were in all the various

calibers from .243 to .30 and ranged in power from the .243 Winchester to the various .300 Magnums.

Deer shot through the lungs with what he describes as "hard" bullets traveled, on average, 57 percent farther before dropping than when the same placement was used with soft bullets. Some of the more commonly used soft bullets were the Sierra GameKing, Swift Scirocco and Nosler Ballistic Tip, while bullets classified as "hard" included those of extreme-controlled-expansion design such as the Barnes X, Winchester Fail Safe and Swift A-Frame.

Most effective caliber/bullet-weight combinations are 90 and 95 grains in .243, 100 grains in .257, 140 in 7mm and 150 in .30 caliber. Even lighter bullets worked very nicely in the smaller cartridges, with 125-grain in the .308 Winchester and 130-grain in the 7mm-08 being a couple of examples.

Lung shots are OK in open country where a blood trail is easy to find and follow, but most of my whitetail hunting through the years has taken place

in thickly wooded and cottonmouth-infested swampy areas of the south-east where a deer can be extremely difficult to find. For this reason I have long preferred to drop them in their tracks with a shot through the shoulders, and Hayward Simmons backs up my preference.

According to his data, the average distance traveled by deer shot through the shoulders by his hunters is only 2.6 yards. For that type of shot, some hunters tend to move up to a heavier bullet, but I prefer to stay with a lighter bullet, in order to keep velocity high, but switch to one of tougher construction.

An example would be to use a Nosler 130-grain Partition in the .270 Winchester for a shoulder shot rather than the Nosler Ballistic Tip of the same weight, which is best suited for a lung shot. For those who would rather stick with the same bullet for both lung and shoulder shots, designs such as the Swift Scirocco, Nosler AccuBond and the Fusion from Federal in their lighter weights are not bad choices.

# Rattling Whitetails

By Greg Rodriguez

When I rattle in a deer for a client, his reaction is usually a mix of excited babbling and disbelief. They've seen it on TV and read it about it in magazines, but few hunters have the requisite faith in the technique and their own abilities to be successful.

Rattling and calling work because deer are, by nature, vocal creatures. Don't believe me? Spend a little time around whitetail breeding operations and you'll see that deer have a pretty extensive vocabulary. Learn how to speak it and you'll take more

braggin'-size bucks.

You can call deer anywhere, any time. Deer are curious creatures, and a decent fawn or contact bleat will often bring nearby deer for a closer look. But I do the majority of my calling in concert with rattling during the rut, where an estrus bleat and sharp grunt are my calls of choice.

There is no right way to rattle. I have never seen two deer fights that sounded exactly the same, so there is no reason rattling won't work for you if you are rattling at the right time in the right place.

The best time to start rattling is when you see an increase in rutting behavior, such as bucks checking does, or an increase in active scrapes. If I notice either of those behaviors, I know it's time to try tickling the antlers. While the deer may not respond with the same reckless abandon that is seen during the heat of the rut, you will usually get enough takers to make rattling the pre-rut an effective tactic.

During the heat of the rut, I rattle every day. I've found that as the rut heats up, bucks respond more aggressively than during the pre-rut.

***With a little faith and know-how, rattling for whitetails can be a potent addition to your bag of tricks.***

The downside is that those aggressive bucks will often be sporting broken head gear. Still, rattling the rut is the best way I know to bring in mature bucks.

As the rut winds down, rattling can still be effective. Amorous bucks will still be looking for does coming into a second estrus, but the aggressive breeders are pretty weak, tired and

beat up by the time the rut winds down. If you call too aggressively, they may hang up. So rattle, but tone it down.

The closer your buck-to-doe ratio is to 1:1, the better rattling works. After all, if each buck has six or eight does, why would he risk fighting for another?

Finally, pay attention to your

setup. Responding bucks will always try to circle downwind, so use natural barriers to keep them from getting downwind or force them to cross open areas before they get downwind. If it all works out, a sharp grunt or an estrus bleat will stop that buck within easy range.

# Whitetail Tips: Sabot Slug Accuracy

By Dick Metcalf

The best of today's fully rifled slug guns with sabot slugs can deliver the same level of accuracy and bullet performance as many ordinary production-grade centerfire rifles, out to at least 150 yards. Sabots are spun by the rifling. The faster they spin, the more stable the enclosed bullet flies. The key to sabot slug performance is smooth separation of the sabot from the projectile.

Sabot petals begin to open instantly as they clear the muzzle, and the bullet is typically set free by the time the sabot/bullet unit is just 12 inches away. If there is the slightest instability, offset or irregularity in the moment of sabot separation, the released bullet will not fly true and successive projectiles will trace varied trajectories.

The faster you drive a sabot projectile, the more muzzle-blast turbulence you create that surrounds the sabot and bullet in the initial milliseconds of separation. Plus, the harder your propellant charge kicks the sabot at the initial moment of ignition, the more distorted (and consequently unbalanced) the sabot may become. Therefore, standard-velocity sabot slug loads are generally more accurate than magnum-velocity loads.

The tolerance matchup of barrel-to-sabot ammunition is critical due to the fact that polymer sabot sleeves are not as tightly spec'd as actual bullets.

*The rewards of a tight-shooting, highly accurate full-rifled slug barrel.*

We all know that guns may shoot better with one load over another. This situation is particularly acute with sabot slug loads, where very small differences in the tightness of the grip of the rifling on the polymer sabot affect the rotational velocity imparted to the bullet within. This bullet velocity determines in-flight stability and, thus, resultant accuracy.

This means that one fully rifled barrel for a slug gun may grip a sabot tightly enough to keep its bullet spinning stable for a killing-grade group all the way to a 200-yard target, while the very next barrel off the line, which may be just a bit more toward the

open side of the manufacturing tolerance range, may only impart enough rotational velocity to stabilize for kill-zone accuracy as far as 125 yards.

The only way to know the real maximum effective accuracy range of any specific sabot/slug-barrel matchup is to shoot it at different distances and apply it accordingly. Try as many different sabot slug loads as you can. When you find a good one, buy as much of the same lot as you can; the next lot of the same load will shoot differently. And remember: *Any* full-rifled sabot slug system will shoot *much* better, much farther, than any traditional smoothbore slug system.

# Mossberg a Home Big Ap

**F**or nearly two decades, New York City police officers could count on the venerable Ithaca Model 37 riding in their patrol car racks. But as the supply of spare parts started to dry up and more and more guns were rendered unserviceable because of endless days of hard use, the department knew it was time to

make a change. After a long search and arduous testing process that lasted 2½ years, the department chose the Mossberg 590A1™.

But the NYPD's chosen one is no ordinary shotgun. Over the coming months, the agency's 36,000 officers will be issued a weapon as distinctive as a New York City accent. The Moss-

berg 590® is a stalwart of law enforcement agencies worldwide and the U.S. military. The team at Mossberg worked closely with NYPD officials to shape this old warhorse into the perfect cruiser shotgun.

"The NYPD went to all the major shotgun manufacturers and gave us all an opportunity to provide firearms

*The NYPD's shotgun is designed from the ground up as a serious combat tool, providing officers with tremendous increase in combat power. Cruisers will be equipped with a specialized Model 590A1.*

# Mossberg Finds Home in the People

The NYPD went searching for a new patrol shotgun and chose a specialized version of the Mossberg 590A1™.

By J. Guthrie

for testing and evaluation,” said Mark Kresser, VP of Sales and Marketing at Mossberg. “Most of the other competitors fell out because of reliability issues while others were hesitant to customize an existing model. Our willingness to work with them in regard to a specialized product is what sold the gun. We were going to make

exactly the gun they wanted.”

The Ithaca Model 37 is a great shotgun; robust and reliable, it has very few faults. But the last 20 years did point out some improvements that needed to be made in the next issue weapon. The bead sight was lacking in low-light and dissimilar to other issue weapons. The department

also wanted to increase magazine capacity and have additional rounds on the gun. Another big challenge was fitting the new shotgun into the NYPD's new cruiser. The department recently switched most cars from Ford Crown Victorias to Dodge Chargers and the electronics array and radio equipment between the front seats did not leave a lot of room for a big shotgun.

“Mossberg put together six different configurations, including all the features we thought the NYPD might want,” Kresser said. “That included different stocks, barrel lengths and sights inside those six configurations. They tested all of them.”

Testing was the easy part, at least for the department. The guns were dumped straight into training rotations at the firearms training and testing facility in the Bronx.

Over 400 officers train there every day, five days a week, to get certified or recertified. The test guns amassed thousands and thousands of rounds in just a few months. Training officers were also able to quickly sort out which features worked and which ones didn't for the remarkably diverse department. Since the weapon would essentially be issued to a cruiser and not an individual, the gun would have to work for any officer—big, tall or small.

Concurrent to the cruiser shotgun program, NYPD's Emergency Services Unit—the department's SWAT team—tested several different breaching guns. They decided on a Tactical Cruiser™ with a pistol grip and stand-off tube. “Those guys were really rough on the test guns,” Kresser said. “They literally pounded the barrels through cinder blocks to make sure the stand-off tube wouldn't come off.”

It took a little longer to settle on a standard-issue shotgun, but the department came up with a package of features ideally suited to the mission of keeping the city's streets safe. The gun starts with a standard 590A1 receiver that is machined from an aluminum forging. The receiver is drilled and tapped to give the department

## Mossberg In The **Big Apple**

*The new shotgun's receiver top safety is ambidextrous and very positive. A red tab gives a visual indicator of the safety's condition.*

*Two different magazines in the Speed-Feed stock allow officers to carry and instantly deploy a wide variety of shotgun rounds.*

*The low-profile, Novak-style rear sight is soldered directly onto the barrel. The three-dot sighting system is similar to that of the department's issue Glock, which simplifies training.*

the options to mount a Picatinny rail, accessories or optics in the future.

A standard, mil-spec trigger group and fire controls are protected by an aluminum trigger guard. Additionally, the top-of-receiver safety button is an aluminum part on the NYPD guns. All the parts have a matte-black, Parkerized finish.

"The 14-inch, cylinder-bore barrel has the same heavy wall thickness found on many of the U.S. Army issue weapons," Kresser said. "The short barrel length was an interesting development, but since you get the same performance and space was

such a big issue, it made a lot of sense to go short."

The NYPD had used the Sarchie rack system for years and the new

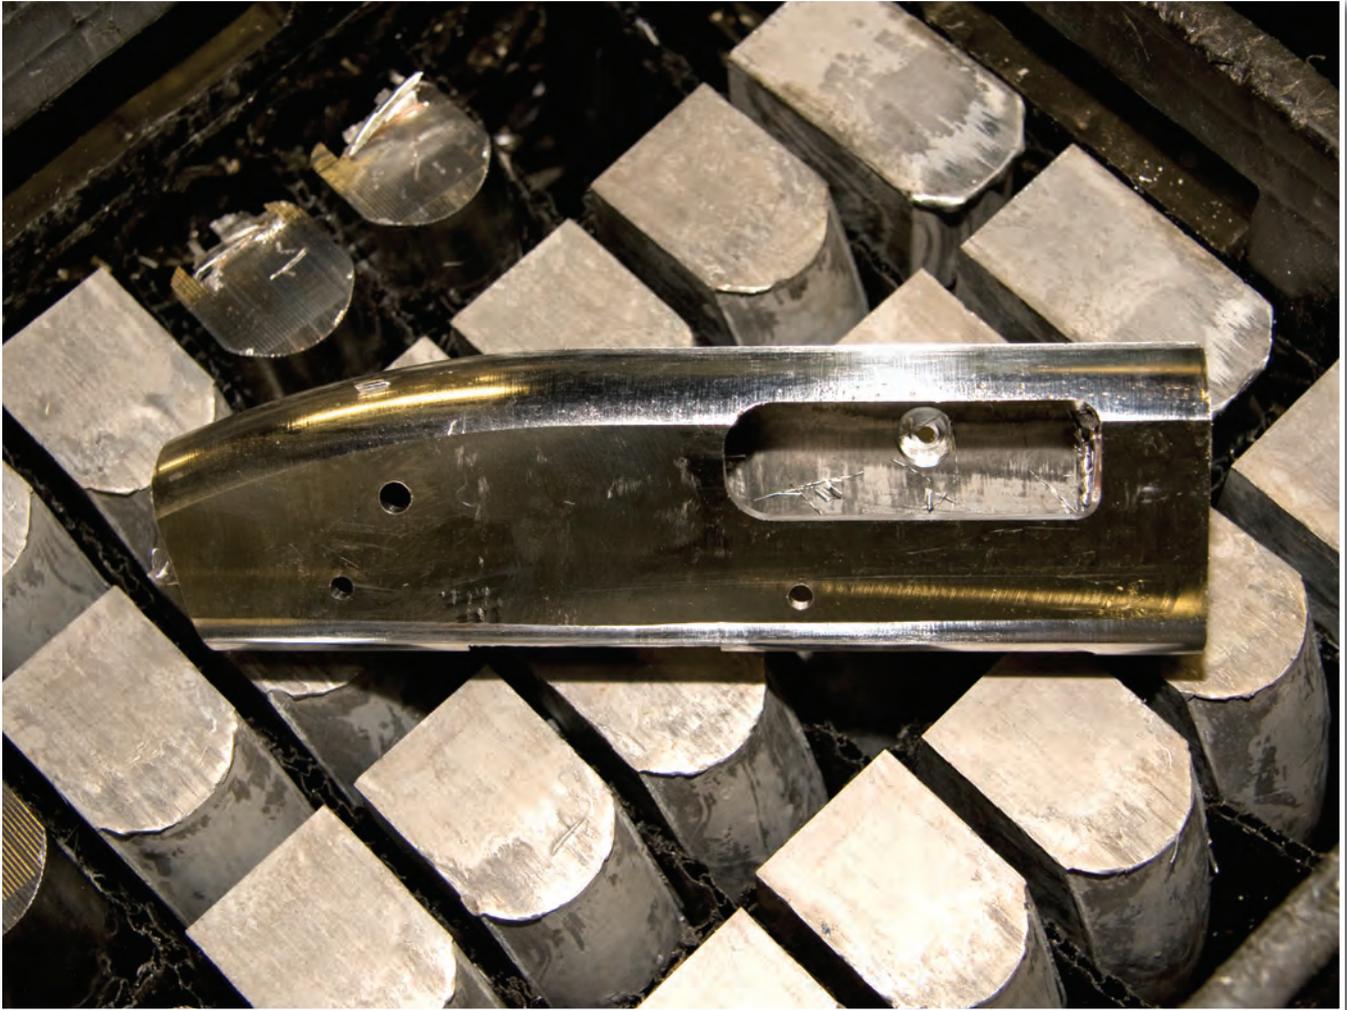

14-inch barrels were too short for the racks. The department wanted to retrofit the racks to their new cruisers, so a rack retrofit was part of the

### THE NYPD CIVILIAN VERSION

The new NYPD shotgun has a lot of proven features that make it a great weapon for cops on the beat. Mossberg created a civilian version of the NYPD gun for those looking to defend hearth and home. It takes advantage of the extensive testing and evaluation completed by the department's firearms training unit.

Now available, the gun is a carbon copy of the NYPD issue weapon with the exception of the 14-inch barrel. While not quite as handy inside the confines of a car or bedroom, the 18½-inch barrel does add one round of capacity to the magazine tube.

The NYPD civilian shotgun is available as a stocked or special-order item at Mossberg dealers nationwide.

***The rugged receivers of the 590A1 are machined from an aluminum forging at Mossberg's North Haven, Connecticut plant.***

contract.

"We sent our engineers down to solve the problem," Kresser said. "We built a bolt-on kit that allowed them to use their old racks. The biggest requirement was that they didn't rattle. Anyone who has driven over pot holes and construction on the streets of New York can understand what a challenge this was."

Increased onboard ammo capacity came in the form of the proven SpeedFeed stock. Four extra rounds, in addition to the five in the magazine tube, are available from two separate magazines found on each side of the stock. The extra rounds slip into a trough in the stock and are held firmly in place by the shotshell crimp area and two molded tabs over the trough. The system is quick to load, quicker to

unload and holds the round in such a way that it is easily identified should the officer want to carry several slug or less-than-lethal rounds and make quick ammunition changes.

"Both front and rear sights are fixed and soldered directly onto the barrel," Kresser said. "The department wanted the sights regulated for 25 yards so it worked best for us to put the sights directly on the barrel." The three-dot, low-profile sights are a Mossberg design but intentionally are very similar to the Novak-style sights that are on the department's Glock pistols. Firearms trainers have found that similar sights make training easier and increase an officer's ability to put rounds on target, especially in low light.

Other features include front and

rear sling swivels and an easy-to-clean magazine tube. Once the magazine cap is removed, the follower and magazine spring slide right out allowing an officer to swab out any dirt or debris. Since the barrel is so much shorter than the previously issued Ithaca's barrel, a fore-end strap was added to prevent officers from placing their hand in front of the barrel.

Mossberg started delivering the NYPD shotgun in February 2008 and the weapon has received rave reviews from officers. It will take about a year to train all of the department's officers and armorers on the new weapon. Given the NYPD's history of looking hard to find the perfect tool and then sticking with it, the NYPD Mossberg will probably be found in cruisers for some time to come. 

# Range Safety

*There are over 7 million skeet, trap and sporting clays shooters in the USA. There are over 20 million handgun and rifle target shooters. The shooting sports remain among the very safest sporting activities, with shooting accidents at all-time lows. This remarkable statistic does not happen by accident — no pun intended. This achievement is the result of shooter awareness, and the constant reinforcement of safety rules.*

Rifle, pistol and shotgun target shooting is best enjoyed when all of the participants on the range are respectful of their fellow shooters, utilize proper range etiquette and above-all, practice safe firearms handling. While all shooters must always be diligent and watchful for unsafe situations, when everyone is handling their firearms safely, the time spent on the range is much more relaxing and enjoyable. Safe handling practices should not be reserved only for when the firearm is actually loaded – rather, it must *always* be practiced so that safe handling “muscle memory” takes over.

If you are unsure about specific rules for any given club, it is best to ask the club’s range safety officer. That way, any rules that are particular to a given club (such as caliber size limits, firing line boundaries, cease fire commands, shot size restrictions, etc.) can be fully explained. Only by learning safe firearm handling practices and being constantly aware of your and other participant’s

*An avid hunter, recreational and competition shooter, author Joe Bartozzi, shown at left, is also an NRA Certified Range Safety Officer. Here, he discusses firearms handling safety with a colleague at the shooting range.*

firearms handling practices, can one develop good solid safety habits.

Below you will find some select firearm safety practices that are basically universal to all range and shooting situations, and, if strictly practiced, will go a long way towards keeping you and those around you safe at the range. While this is by no means a complete or exhaustive list, they outline some of the more important concepts to consider.

## **Keep the action open and the muzzle pointed in a safe direction.**

This “rule” illustrates not only the importance of rendering the firearm incapable of firing and serving as a visual indicator to all other shooters that the firearm cannot fire, but also stresses the extremely important aspect of controlling the direction of the muzzle. Be aware, however, that the safe direction instruction is not always self-evident. A safe direction is defined as a direction

where there can be no human injury and at worst, some minor property damage. The “safe direction” will change depending upon where you are and what is around you. On the range, a safe direction is **ALMOST** always straight downrange, **BUT** be aware that target changes, the loading of trap machines, etc. will invariably require people to head downrange. At those times, the safest direction is probably on a gun rack with the action open and the muzzle pointing straight up.

### Load only when appropriate.

On the skeet, sporting clays and trap fields, for example, one should load **ONLY** when properly positioned in the shooting station and **ONLY** when it's your turn to fire. When target shooting or practicing at the range, **NEVER** load prior to stepping up to the firing line. Closing the action, especially on live ammunition, at any other time should not be tolerated. Be aware that certain shooting sports such as American Trap (Singles and Handicap) allow only one round to be loaded when you're preparing to call for your target.

### Never touch a firearm if someone is forward of the firing line.

This applies when someone is loading the trap house, or going downrange to change pistol or rifle targets. There should be **NO** set of circumstances where firearms are being handled with shooters (or any other persons) downrange.

### Know your club's rules.

The rules may consist of cease fire commands, magazine capacity, hours of operation, the type of ammunition that is acceptable (e.g. shot size on the skeet

and trap fields are generally important to limit the distance to the shot fall zone), etc. This not only helps to increase safety at the range, but also helps the range maintain its status as a “good neighbor” as regards shot or bullets leaving the club property and noise limits, for example.

### Never handle someone else's firearm without their permission.

This is important because various firearms have similar, but different, user controls. As an example, some shotguns utilize “release triggers” which, although they should be clearly marked, work in a completely opposite manner from traditional triggers. It is important to become thoroughly familiar with all of the handling and user control features of any firearm **BEFORE** loading it with live ammunition.

### Be informed. Stay informed.

Mossberg® Owner's Manuals provide not only familiarization, use, and maintenance instructions for your firearm, but also a thorough set of important safety warnings. Please make sure that **BEFORE** you handle any firearm you take the time to read and thoroughly understand all of the safety warnings contained in its Owner's Manual.

If you are unsure about the rules at your particular club, or an establishment that you are planning to visit, the on-site Range Safety Officer can provide you with important instructions. ■

*Safety and safe firearm's handling is everyone's responsibility!*

*Mossberg proudly supports programs that encourage safety, education, and the promotion of the shooting sports through its association with numerous organizations.*

*Though many safety rules are universal in nature, every shooting venue is likely to have unique requirements and guidelines for shooters using their facility. Never assume — check with the Range Safety Officer for details before approaching the line!*

# 2009 Buyer's Guide

**NEW**

## 2009 BUYER'S GUIDE

# 464™ Lever-Action Rifles

CENTERFIRE & RIMFIRE RIFLES — SEE PAGE 89 FOR PRODUCT SPECIFICATIONS

**New Pistol Grip Stock**— Features diamond pattern cut checkering on pistol grip and forearm for a stylish look and an easy grip in the field. Far right: Intricate cut checkering surrounds the pistol grip stock's forearm, edge-to-edge.

### 464™ Centerfire Lever-Action Rifle

.30-30 Win., 20" Barrel, Blued Finish, Checkered Pistol Grip Wood Stock, Item #41020

### 464™ Centerfire Lever-Action Rifle

.30-30 Win., 20" Barrel, Blued Finish, Straight Grip Wood Stock, Item #41010

### 464™ Rimfire Lever-Action Rifle

.22LR, 18" Barrel, Blued Finish, Straight Grip Wood Stock, Item #43000

### 464™ Lever-Action Rifles

- **A New Era**— A throwback to the days of the 'Wild West' and the storied traditions of hunters and trappers across the country, this series of centerfire and rimfire rifles combine the features, reliability and affordability that will surely bring forth a new era in lever-action history
- **Quality Queues**— Features a button-rifled barrel, recessed muzzle crown, top-tang safety, recoil softening rubber buttpad and a smooth, robust lever-action
- **Special Features**— Precision-machined receiver provides the 464 Lever-Action with positive lockup for consistent accuracy and long-lived reliability; ejection port developed and positioned specially to ensure proper scope clearance of spent cartridges
- **Drilled & Tapped**— Centerfire models includes factory drilled and tapped receiver for quick, easy optics installation
- **Capacity**— Tubular magazine offers 6+1 capacity (centerfire) and 13+1 capacity (rimfire)
- **Every 464 Rifle** includes a free gun lock and 2-year limited warranty.

**SEE PAGES 89 – 99 FOR COMPLETE PRODUCT LISTINGS AND SPECIFICATIONS.**

**LIGHTNING BOLT ACTION™**  
ADJUSTABLE TRIGGER SYSTEM

**NEW**

**NEW**

**NEW**

■ **New Adjustable Lightning Bolt Action™ (LBA™) Trigger System** (Patent Pending) comes standard on all 4x4 models. With its unique skeletonized lightning bolt trigger blade, the LBA™ offers the best in form and function, including:

**User-Adjustable Trigger** — Allows for trigger pull down to 2 lbs. (adjusts with standard screwdriver)

**Creep-Free Trigger Pull** — Design of sear engagement offers a truly creep-free trigger

**Skeletonized Lightning Bolt Trigger Blade** — Blocks the sear from releasing the striker unless the blade is depressed

**Military-Spec Durability** — Our trigger assembly is machined from aircraft-grade aluminum, then hard-coat anodized to military spec to prevent corrosion and minimize wear over time

**Selection** — Our LBA™ Trigger System is found on every 4x4 Bolt-Action, over 100 models in all. Also found on 100ATR® models (see pages 66-67).

## 2009 BUYER'S GUIDE

# 4x4™ Bolt-Action Rifles

104 BOLT-ACTION RIFLE CONFIGURATIONS — SEE PAGE 89 FOR PRODUCT SPECIFICATIONS

**4x4™ Rifle — Skeletonized Stock/Synthetic**

24" Barrel, Marinecote™ Finish, Skeletonized Black Synthetic Stock, LBA™ Trigger, Available in 6 Calibers from .25-06 Rem. to .338 Win. Mag.

**4x4™ Rifle — Skeletonized Stock/Synthetic Laminate**

24" Barrel, Matte Blue Finish, Skeletonized Laminate Finished Synthetic Stock, LBA™ Trigger, Available in 6 Calibers from .25-06 Rem. to .338 Win. Mag.

**4x4™ Rifle — Classic Stock/Walnut**

24" Barrel, Matte Blue Finish, Classic Walnut Stock, LBA™ Trigger, Available in 6 Calibers from .25-06 Rem. to .338 Win. Mag.

**4x4™ Rifle — Classic Stock/Laminate**

24" Barrel, Matte Blue Finish, Classic Laminate Stock, LBA™ Trigger, Available in 6 Calibers from .25-06 Rem. to .338 Win. Mag.

**4x4™ Rifle — Classic Stock/Synthetic**

24" Barrel, Marinecote™ Finish, Classic Black Synthetic Stock, LBA™ Trigger, Available in 6 Calibers from .25-06 Rem. to .338 Win. Mag.

**4x4™ Rifle — Sculpted Stock/Walnut/Rifle Sights**

22" Barrel, Matte Blue Finish, Sculpted Walnut Stock, LBA™ Trigger, Adjustable Rifle Sights, Available in 3 Calibers from .30-06 Sprg. to .338 Win. Mag.

**4x4™ Rifle — Sculpted Stock/Laminate**

24" Barrel, Matte Blue Finish, Sculpted Laminate Stock, LBA™ Trigger, Available in 6 Calibers from .25-06 Rem. to .338 Win. Mag.

**ALWAYS KEEP THE MUZZLE POINTED IN A SAFE DIRECTION.**

**4x4™ Scoped Combo — Sculpted Stock/Laminate** 

24" Barrel, Marinecote™ Finish, Sculpted Laminate Stock, LBA™ Trigger, 3-9x40mm Variable Scope, Available in 3 Calibers from .270 Win. to .300 Win. Mag.

**4x4™ Scoped Combo — Sculpted Stock/Walnut** 

24" Barrel, Matte Blue Finish, Sculpted Walnut Stock, LBA™ Trigger, 3-9x40mm Variable Scope, Available in 3 Calibers from .270 Win. to .300 Win. Mag.

**4x4™ Scoped Combo — Classic Stock/Synthetic** 

24" Barrel, Matte Blue Finish, Classic Black Synthetic Stock, LBA™ Trigger, 3-9x40mm Variable Scope, Available in 3 Calibers from .270 Win. to .300 Win. Mag.

**4x4™ Rifle — Classic Stock/Walnut** 

24" Barrel, Matte Blue Finish, Classic Walnut Stock, LBA™ Trigger, Available in 6 Calibers from .25-06 Rem. to .338 Win. Mag.

**4x4™ Scoped Combo — Classic Stock/Laminate** 

24" Barrel, Marinecote™ Finish, Classic Laminate Stock, LBA™ Trigger, 3-9x40mm Variable Scope, Available in 3 Calibers from .270 Win. to .300 Win. Mag.

**4x4™ Rifle — Sculpted Stock/Laminate** 

24" Barrel, Matte Blue Finish, Skeletonized Black Synthetic Stock, LBA™ Trigger, Available in 6 Calibers from .25-06 Rem. to .338 Win. Mag.

**4x4™ Scoped Combo — Skeletonized Stock/Syn. Laminate** 

24" Barrel, Matte Blue Finish, Skeletonized Laminate Finished Synthetic Stock, LBA™ Trigger, 3-9x40mm Variable Scope, Available in 3 Calibers from .270 Win. to .300 Win. Mag.

**4x4™ Bolt-Action Rifles**

- **Upgraded Trigger System**— All 4x4 bolt-action models now come standard with our new adjustable, creep-free Lightning Bolt Action™ Trigger system
- **Unique, Stylish Design**— High-tech, ergonomic style and robust reliability makes these guns a sheer pleasure to handle and shoot
- **Stock Options**— The 4x4 line includes three stock style options: "Skeletonized," "Sculpted," and the new "Classic" configuration
- **Scoped Combos**— Factory-mounted, laser bore sighted scoped combos are available, featuring a 3-9x40mm variable centerfire rifle scope
- **Quality Queues**— The free-floating, button-rifled barrel, recessed muzzle crown, two-piece factory installed scope bases (non-rifle sight models), and a smooth, solid action all combine for a reliable, durable bolt-action at a tremendous price
- **Tack Driving Accuracy**— the free-floating, button rifled barrel provides for exceptional "out-of-the-box" accuracy in the most extreme weather conditions
- **Box Magazine**— the handy drop box magazine provides reliable feeding, simple loading/unloading
- **Scope Bases**— Weaver-style, two-piece scope bases are factory installed on all non-rifle sight models for quick and easy optics installation
- **Marinecote™ Models**— Mossberg's proprietary all-weather Marinecote™ finish provides the ultimate protection in extreme weather, especially near tough marine environments
- **Every 4x4™** comes factory assembled and includes a free gun lock and 2-year limited warranty.

**100ATR® Bantam™ Short-Action**   
.308 Win., 20" Barrel, Matte Blue Finish, LBA™ Trigger,  
Walnut Stock, Item #26242

**NEW**

■ **New Adjustable Lightning Bolt Action™ (LBA™) Trigger System** (Patent Pending) comes standard on most 100ATR® models. With its unique skeletonized lightning bolt trigger blade, the LBA™ offers the best in form and function, including:

**User-Adjustable Trigger** — Allows for trigger pull down to 2 lbs. (adjusts with standard screwdriver)

**Creep-Free Trigger Pull** — Design of sear engagement offers a truly creep-free trigger

**Skeletonized Lightning Bolt Trigger Blade** — Blocks the sear from releasing the striker unless the blade is depressed

**Military-Spec Durability** — Our trigger assembly is machined from aircraft-grade aluminum, then hard-coat anodized to military spec to prevent corrosion and minimize wear over time

**Selection** — Our LBA™ Trigger System is found on almost all of our 100ATR® Bolt Action models. Also found on 4x4™ models (see pages 64-65).

**ALWAYS WEAR PROPER EAR AND EYE PROTECTION WHILE SHOOTING.**

**100ATR® Super Bantam™ Short-Action**   
 .308 Win., 20" Barrel, Matte Blue Finish, LBA™ Trigger,  
 Adjustable Black Synthetic Stock (inset, below), Item #26245

 Black Synthetic Stock, 3-9x40mm Variable Scope,  
 Item #26150

### 100ATR® Bolt-Action Rifles

- **Upgraded Trigger System**— Most 100ATR bolt-action models now come standard with our new adjustable, creep-free Lightning Bolt Action™ Trigger system
- **Quality Queues**— The free-floating, button-rifled barrel, recessed muzzle crown, two-piece factory installed scope bases, and smooth, solid action all combine for a super-reliable bolt-action at a tremendous price
- **Top-Load Magazine**— the integral top-load magazine offers 4+1 capacity while providing reliable feeding and simple loading and unloading
- **Scoped Combos**— Factory-mounted scoped combos are available, featuring a 3-9x40mm variable centerfire rifle scope
- **Bantam & Super Bantam Models**— offer special features including a shortened length of pull and pistol grip, shorter barrel, and a soft, supple recoil-reducing butt pad. Super Bantam models feature an innovative adjustable stock for the growing shooter
- **Scope Bases**— Weaver-style, two-piece scope bases are factory installed on all non-rifle sight models for quick and easy optics installation
- **Marinecote™ Models**— Mossberg's proprietary all-weather Marinecote™ finish provides the ultimate protection in extreme weather, especially near tough marine environments
- **Wide Selection**— choose from the standard Black Synthetic, unique Dura-Wood™ Walnut finish, functional Hi-Def Camo, or the traditional Walnut stock to suit your hunting style
- **Every 100ATR®** comes factory assembled and includes a free gun lock and 2-year limited warranty.

**SEE PAGES 89 – 99 FOR COMPLETE PRODUCT LISTINGS AND SPECIFICATIONS.**

## 2009 BUYER'S GUIDE

# 935 Magnum™ Autoloader

17 AUTOLOADING SHOTGUN CONFIGURATIONS — SEE PAGE 91 FOR PRODUCT SPECIFICATIONS

**NEW**

### 935 Magnum™ Turkey — Pistol Grip

12 Gauge, Mossy Oak® Obsession®, 22" Overbored Barrel, X-Factor Ported Tube, Item #82540

### 935 Magnum™ Turkey

12 Gauge, Mossy Oak® New Break-Up®, 24" Overbored Barrel, Item #82036

### 935 Magnum™ Grand Slam Series™

12 Gauge, Realtree® Hardwoods® HD Green, 22" Overbored Barrel, X-Factor Ported Tube, Padded Sling, Item #81039

### 935 Magnum™ Grand Slam Series™

12 Gauge, Mossy Oak® New Break-Up®, 22" Overbored Barrel, X-Factor Ported Tube, Padded Sling, Item #81038

### 935 Magnum™ Flyway Series™

12 Gauge, Advantage® Max-4®, 28" Overbored Barrel, X-Factor Ported Tube, Padded Sling, Item #82034

## 935 Magnum™ Autoloaders

- **Hardcore Versatility**— Developed for use with 12 gauge 3" and 3 1/2" factory loaded shotshells... from high-brass small game loads to the most punishing non-toxic and lead 3 1/2" magnum rounds
- **Gas System**— Dual gas-vent system vents excess gases to aid in recoil reduction and eliminate stress on operating components
- **Drilled & Tapped**— All 935™ models feature a drilled and tapped receiver, factory-ready for scope base and optics installation
- **Fiber Optic Sights**— Fiber optic front bead sight standard on all waterfowl models; fully adjustable front and rear fiber optic sights standard on all turkey models
- **Choke Tubes**— Interchangeable Accu-Mag™ choke tube set and wrench (Improved Cylinder, Modified, Full) are included with all waterfowl models
- **Uni-Line Stock and Receiver**— Soft, angled edge of receiver marries with the stock perfectly, providing instinctive eye/rib alignment
- **Turkey Chokes**— Premium ported X-Factor™ or extended Ulti-Full™ chokes on turkey models
- **Quick-Empty Magazine Button**— Easy-to-operate quick-empty magazine button releases contents of the magazine for quick, convenient unloading
- **Every 935™** comes factory assembled and includes a free gun lock and 2-year limited warranty.

**TREAT EVERY FIREARM AS IF IT WERE LOADED.**

**935 Magnum™ Waterfowl**

12 Gauge, Black Synthetic Stock, 28" Overbored Barrel, Sling, Item #81000

**935 Magnum™ Waterfowl**

12 Gauge, Mossy Oak® New Break-Up®, 28" Overbored Barrel, Sling, Item #81035

**935 Magnum™ Waterfowl**

12 Gauge, Advantage® Max-4®, 26" Overbored Barrel, Item #82037

**935 Magnum™ Waterfowl**

12 Gauge, Mossy Oak® Duck Blind®, 28" Overbored Barrel, Sling, Item #81020

**935 Magnum™ Slugster®**

12 Gauge, Realtree® AP®, 24" Fully-Rifled Slugster® Barrel, Rifle Sights, Item #81031

**935 Magnum™ Turkey/Deer Combo**

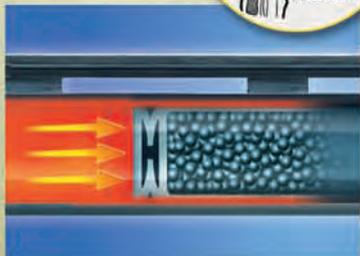

12 Gauge, Mossy Oak® New Break-Up®, 24" Fully-Rifled Slugster® Barrel and 24" Overbored Turkey Barrel, Item #82210

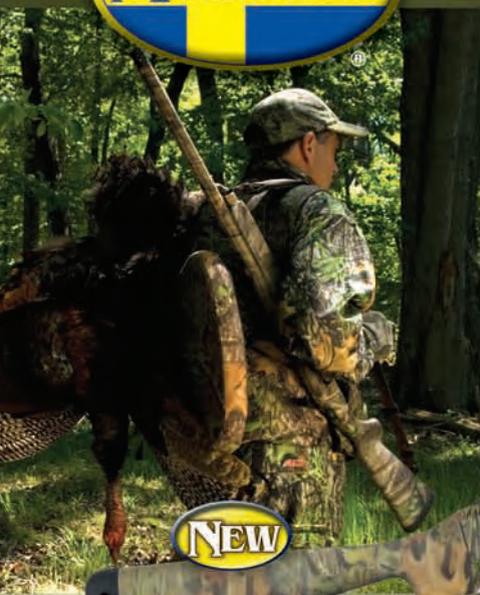

**935 Magnum™ Waterfowl/Turkey Combo**

12 Gauge, Mossy Oak® New Break-Up®, 28" and 24" Overbored Barrels, Item #81224

■ **Barrel Overboring**— Every 935 Turkey & Waterfowl shotgun barrel is overbored to 10 gauge bore dimensions. Unlike other “backbored” brands, this unique design spans the entire length of the barrel, providing a gas “cushion” for the shot charge. Not only does this reduce felt recoil, it more importantly reduces pellet deformation and internal friction, resulting in exceptionally uniform, dense shot patterns for which Mossberg overbored models are known.

**SEE PAGES 89 – 99 FOR COMPLETE PRODUCT LISTINGS AND SPECIFICATIONS.**

**NEW**

**NEW**

## 2009 BUYER'S GUIDE

# 930™ Autoloader

17 AUTOLOADER CONFIGURATIONS — SEE PAGE 91 & 92 FOR PRODUCT SPECIFICATIONS

### 930™ Field

12 Gauge, American Black Walnut Stock, 28" Ported Barrel, Item #85110

### 930™ Turkey

12 Gauge, Mossy Oak® Obsession®, 24" Ported Barrel, Item #85213

### 930™ Waterfowl

12 Gauge, American Black Walnut Stock, 28" Ported Barrel, Item #85115

### 930™ Waterfowl

12 Gauge, Advantage® Max-4™, 28" Ported Barrel, Item #85228

### 930™ Autoloaders

- **Versatile**— Developed for use with 12 gauge 2<sup>3</sup>/<sub>4</sub>" and 3" factory loaded shotshells... from low-brass 1oz. target loads to non-toxic magnum rounds
- **Gas System**— Dual gas-vent system vents excess gases to aid in recoil reduction and eliminate stress on operating components
- **Drilled & Tapped**— All 930™ models feature a drilled and tapped receiver, factory-ready for scope base and optics installation
- **Sighting Options**— Select models are offered in a range of standard front bead, fiber optic, traditional rifle-type and integral scope base models
- **Choke Tubes**— Interchangeable Accu-Choke™ tube set and wrench (Improved Cylinder, Modified, Full) are included with all waterfowl and field models
- **Uni-Line Stock and Receiver**— Soft, angled edge of receiver marries with the stock perfectly, providing instinctive eye/rib alignment for instant target acquisition
- **Quick-Empty Magazine Button**— Easy-to-operate quick-empty magazine button releases contents of the magazine for quick, convenient unloading
- **Turkey Features**— XX-Full extended choke and fully adjustable front and rear fiber optic sights offered on select turkey models
- **Every 930™ Autoloader** is factory assembled and includes a free gun lock and 2-year limited warranty.

**NEVER USE ALCOHOL OR DRUGS BEFORE OR WHILE SHOOTING.**

**930™ Waterfowl**

12 Gauge, Mossy Oak® Duck Blind®, 28" Ported Barrel, Item #85210

**930™ Slugster®**

12 Gauge, Black Synthetic Monte Carlo Stock, Integral Scope Base, 24" Ported/Fully-Rifled Slugster® Barrel, Item #85232

**930™ Slugster®**

12 Gauge, Mossy Oak® New Break-Up® Monte Carlo Stock, Integral Scope Base, 24" Ported/Fully-Rifled Slugster® Barrel, Item #85310

**930™ Slugster®**

12 Gauge, Realtree® AP® Monte Carlo Stock, Integral Scope Base, 24" Ported/Fully-Rifled Slugster® Barrel, Item #85311

**930™ Slugster®**

12 Gauge, American Black Walnut Stock, 24" Ported/Fully-Rifled Slugster® Barrel, Adjustable Rifle Sights, Item #85114

**930™ Field/Deer Combo**

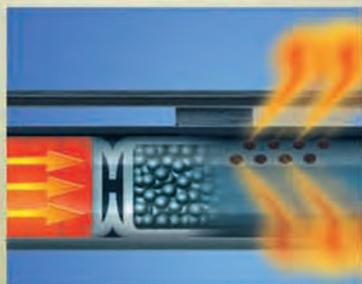

12 Gauge, American Black Walnut Stock, 26" Ported Field and 24" Ported/Fully-Rifled Slugster® Barrels, Item #85125

**930™ Deer/Waterfowl Combo**

12 Gauge, Black Synthetic Stock, 24" Ported/Fully-Rifled Slugster® and 28" Ported Waterfowl Barrels, Item #85238

■ **Barrel Porting**—All 930 Autoloader barrels are factory-ported with multiple rows of vents near the muzzle. These ports provide distinct advantages for the shooter: the comfort of lower felt recoil and reduced muzzle jump, resulting in faster recovery of your sight picture for followup shots.

**SEE PAGES 89 – 99 FOR COMPLETE PRODUCT LISTINGS AND SPECIFICATIONS.**

## 2009 BUYER'S GUIDE

# 835® Ulti-Mag® Pump-Action

23 PUMP-ACTION SHOTGUN CONFIGURATIONS — SEE PAGE 92 FOR PRODUCT SPECIFICATIONS

## Bantam<sup>™</sup> Series Shotguns

- **Versatile**— Offered in a full line of .410 bore, 20 and 12 gauge models
- **Special Features**— All 500<sup>®</sup> Bantam<sup>™</sup> and 505 Youth<sup>™</sup> 12 and 20 gauge models include special features found only on these models, including EZ-Reach<sup>™</sup> forearm, shortened pistol grip, reduced LOP and shorter barrels for improved balance
- **Drilled & Tapped**— All 12 and 20 gauge 500<sup>®</sup> Bantam<sup>™</sup> and 505 Youth<sup>™</sup> models feature a drilled and tapped receiver, factory-ready for scope base and optics installation
- **Quality Queues**— A combination of dual extractors, twin action bars, positive steel-to-steel lock-up, and an anti-jam elevator combine for reliable, smooth operation
- **Ported Barrels**— Select 12 and 20 gauge barrels are factory ported for reduced muzzle jump and felt recoil
- **Fiber Optic Sights**— Fully adjustable front and rear fiber optic sights standard on the 500<sup>®</sup> Bantam<sup>™</sup> turkey model — perfect for use in low light conditions
- **Choke Tubes**— Interchangeable Accu-Choke<sup>™</sup> tube set and wrench and X-Full choke tubes included on select models
- **Turkey Features**— X-Full extended choke and fully adjustable front and rear fiber optic sights offered on select turkey models
- **Every 500<sup>®</sup> Bantam<sup>™</sup> and 505 Youth<sup>™</sup>** includes a free gun lock and 10-year limited warranty.

**DON'T RELY ON YOUR FIREARM'S "SAFETY."**

12 Gauge, 28" Ported Barrels, Extra-wide 10mm Rib, Black Walnut Stock, Scroll Engraving, Item #75418

### Onyx Reserve™ Sporting

12 Gauge, 28" Ported Barrels, Extra-wide 10mm Rib, Black Walnut Stock, Scroll Engraving, Item #75431

### Reserve Series™ Over/Unders

- **Bantam Model**— 20 ga. Silver Reserve Bantam model features a shortened walnut buttstock and recoil reducing buttpad
- **Field Models**— offered in 12, 20, 28 gauge and .410 bore models, featuring rich scroll work and gold engraved game scenes
- **Sporting Models**— Silver Reserve™ and Onyx Reserve™ Sporting models feature rich scroll work, a special extra-wide 10mm rib, ported barrels, and a 1/4" longer LOP for enhanced fit on the range
- **Turkish Walnut**— Elegant yet functional, every model features a cut checkered Turkish black walnut stock and forearm, cut with classic lines for optimum handling performance
- **Dual Locking Lugs**— robust lugs provide strong, secure lock-up of barrels to the receiver for maximum reliability and longevity
- **Selective Trigger**— single selective trigger features a crisp trigger pull and is protected via a spacious trigger guard with sweeping edges for use with gloved fingers
- **Choke Tubes**— Interchangeable Sport Set includes wrench and five choke tubes: Improved Cylinder (2), Modified, Improved Modified and Full.
- **Safety and Barrel Selector**— Each model Reserve™ is equipped with an ambidextrous thumb-operated safety and integrated barrel selector, located on the top tang for convenient, easy-to-see operation
- **Chrome-Plated Chambers and Bores**— a feature on all models, maximize corrosion resistance, and at the same time minimize shot/wad friction while traveling the length of the bore
- **Every Reserve Series™** Over-and-Under includes a free gun lock and 1-year limited warranty.

**ALWAYS USE THE PROPER AMMUNITION FOR YOUR FIREARM.**

Accessory Barrels are available for a variety of Mossberg 500, 535, and 835 Ulti-Mag pump-actions; 935 Magnum and 930 autoloader; as well as replacement barrels for Remington 870 Slug and Security shotguns.

## ACCESSORY BARRELS & BARREL/SCOPE COMBOS

Extend your hunting season with a Mossberg accessory barrel. Offered in a variety of the most popular Slug, Turkey, All-Purpose and Security configurations (chart, Page 100). Choose different barrel lengths, finishes and sighting options — including two new models for 870 owners — Rolling Thunder™ and Road Blocker™ (below left and right respectively). Looking to take the guesswork out of fitting optics for your shotgun? Mossberg's high-value Accessory Barrel/Scope Combos are available for five pump-action models.

## MOSSBERG ACCESSORIES

A full range of replacement parts and accessories are available to improve your hunting and shooting experience. Look for our attractive, coordinated packaging lines at your favorite retailer.

### CHOKE TUBE WRENCH

95205 CHOKE TUBE WRENCH ALL FOR USE WITH 500, 505, 535, 835, 930, 935 MODELS

**IMPORTANT NOTES** **ACCU-CHOKE:** CHOKE TUBES MAY BE USED ON THE FOLLOWING INTERCHANGEABLE CHOKE MODELS: MOSSBERG, SMITH & WESSON, SAVAGE, U.S. REPEATING ARMS AND MAVERICK. **ACCU-MAG:** ACCU-MAG CHOKE TUBES ARE FOR USE WITH 935, 835 & SSI-ONE MODELS ONLY.

### X-FACTOR PORTED CHOKE TUBES

Combining precision-engineered choke constrictions with two rows of specially angled ports, the X-FACTOR choke tubes provide the dedicated waterfowl and turkey hunter an added edge in the field.

### ACCU-CHOKE & ACCU-MAG CHOKE TUBES

For consistent pattern performance with a variety of loads, look for Accu-Choke and Accu-Mag choke tubes in a variety of gauges and constrictions for hunting and recreational shooting.

## OFFICIAL MOSSBERG LICENSED PRODUCTS

For nearly a century, the Mossberg brand has been synonymous with providing shooters with safe, reliable firearms — at a price few others can match. Now, the Mossberg tradition of “more gun for the money” has been expanded to include high-quality, outdoor products. Under license from Mossberg, you'll find a number of hunting, shooting and outdoor products — scrutinized by us, and endorsed with the Mossberg brand. Check for them at your local retailer or visit our website for a current list of licensed products.

### CUTLERY & FLASHLIGHTS

Based on designs by Meyenco, you'll find quality cutlery for hunting and personal use along with a selection of tactical-style flashlights. For more information on retail locations, call 214.467.8949

### FIREARMS CLEANING SWABS

Offered by Solon Manufacturing Company, these disposable foam-covered swabs are the perfect way to keep your firearm looking its best, and ready for action. For more information on retail locations or to order direct, call 800.341.6640
